Sorry Lance it sounds like the video transformer has had it. If you lived down here I would have to tell you that your monitor would now make a good boat anchor. However if you don't live in OZ you may find that you will be able to get the part and have it repaired. I hope that you did not pay too much for it. The story as I heard it is that the german manufacturer will only sell the part in lots of eight units. So a lot of people are not willing to outlay that much cash, but you may be luckey. I am pretty sure that the Vid. T/former is the problem as my SC1435 recently spat the dummey and that was the noise it made too.

Seeyoulatermate.

3. Hebrew Word Processor

Newsgroup: comp.sys.atari.st
Date: 1994-10-01 00:26:33 UTC
From: rrice@netnews.upenn.edu
Message-ID: <36iabp$6bk@netnews.upenn.edu>
Source record: 180007

Hello! (If this is a duplicate, I never saw the original!)

My Mega 4 Mono STE-using dentist occasionally does some light banners and such for his synagogue, and has long looked in relative vain for something that'll do Hebrew characters, with accents, right to left. Recently, we heard of something called ARAHOFF, exactly what he was looking for in a Hebrew PD Word Processor, but I haven't been able to ARCHIE it out of the net. Does anyone have it, and, having it, would they be willing to post it to an FTP site? Many thanks.

Rob S. Rice

Would in not be cheaper just to replace the drive mech, I don't know what machine you are using, you did refer to a internal in your posting, but the header was quoting a ST..??

You would save the costs of a Box and PSU...

Thanks for the moral support :-)

>- Papyrus doesn't work under Geneva. The horiz. ruler freezes the program when
>on; without it Papyrus works even with Geneva. Is the problem in Geneva or
>Papyrus - and will there be a solution..?

As Rick Flashman wrote this can be fixed by updating to the future Geneva
Release 004 or Papyrus >= 3.56. There is still another problem though
with mouse click events; this will be fixed by future papyrus or Geneva
versions or both, if possible.

>- Is there any way to delete a single word with a keyboard shortcut? The
>(english) manual, though is good, doesn't help much in this. The method it
>describes, actually deletes a whole line... ;-((CTRL-del)

We plan to adapt some keyboard shortcuts to the standard that's currently
being voted on in the gem-list mailing list in the next major release.
Ctrl-Del for deleting a word will be part of this.

>- Can one create tab points automatically, e.g. you set one point and Papyrus
>creates the following tabs by a fixed distance (e.g. 5 spaces) ? That would be
>important for some of us.

It's on our Long Feature List, but other things have higher priority at the
moment. Don't expect that so soon.

>- CVG support would be GREAT, and so would EPS support..!

I got the CVG specs, I'll take a look how complex it is... Unlike
GEM metafiles, there seem to be no free sources.
EPS printing would require a complete PostScript engine unless the printer
has built in PostScript. Since only few Atari users have PostScript
printers, there is too little interest in this.

> to continue your work in Papyrus. As Word is the actual standard of PC world,
> it'd be very handy to have a "Word-compatible" Papyrus, don't you think?

Technically there is more future in an improved RTF support, because RTF
is a well-documented standard supported by many houndreds of programs on
all major platforms.
Contrarily, the MS Word and WordPerfect text formats have evolved over a
long time and are very hard to implement correctly. I'm not even sure
if documentation is available. Besides, any converter will be outdated
when the next major version of these programs appears.

Graphics can also be stored in RTF. Papyrus currently does not support this,
because several different graphic formats can be used, and there is no way
to store multiple references to a part of a picture as papyrus handles it.
Of course there are ways around this, but we will get to this later.

In fact the latest RTF Spec 1.2 implements almost everything MS Word can do,
which means that it inherits some of its design weaknesses too, but it's still
quite complete. We continously improve our RTF import/export.

6. 520 ST: Can you convert from 1 sided -> 2 sided drive?

Newsgroup: comp.sys.atari.st
Date: 1994-10-01 02:48:05 UTC
From: mal@valandil.adc.com
Message-ID: <MAL.94Sep30214806@valandil.adc.com>
Source record: 180016

Hi,

My cousin has an Atari 520ST with single sided drives. He has
been told he can't put a double sided drive in it.

Why? If he can, how?

Please respond via E-mail as I usually don't read ths list.

If this is in the FAQ, please tell me where to grab it.

Thanks,

11. HELP NEEDED

Newsgroup: comp.sys.atari.st
Date: 1994-10-01 06:35:26 UTC
From: mrblonde@lamar.ColoState.EDU
Message-ID: <36ivve$4v0n@lamar.ColoState.EDU>
Source record: 179905

A short while ago me & my partner purchased an old 520STFM
that we want to use for MIDI. However there seem to be a lot
of problems with it that I wasn't expecting. One of the most
annoying is that we need a mono monitor to run any sort of
decent midi software - why is the ST the only computer that I've
run across that requires this? Also, it seems as though the
operating system (tos 1.0) is about as archaic and uncompatible
as you can get, and seems to give problems running any sort of
newer software. Not to mention that an STE would have solved a lot
of these problems.

Anyway I've already dropped $300 on the damn thing, got it upgraded
to 1 meg of memory and everything. But before I spend any more
money (on a TOS upgrade and a mono monitor) I need to _seriously_
know whether this thing is ever going to be of any use. Is it
just too ancient? Also, what would it cost to get a small hard
drive (say 40 meg) hooked up to get rid of those floppy delays?
(a few years in the PC world has made me a little impatient with
floppies, I'm afraid.)

Anyway, it _is_ a neat little computer, and would be good for
a dedicated midistation (which is what we want!) but I am so
disgusted with having to buy all these upgrades.. please hlep

(help that is)

Quite true. I wasn't particularily impressed with it. It looked
interesting enough, but there was nothing one could do with it; you just sat
and watched, and you couldn't even watch a whole game, as after something
like three or four minutes it reset itself.

13. -Wanted: Atari SC1224 Monitor (sellers please read)

Newsgroup: comp.sys.atari.st
Date: 1994-10-01 12:40:11 UTC
From: quest@panix.com
Message-ID: <quest.1131402851E@198.7.0.1>
Source record: 180050

2 Weeks ago I purchased an SC1224 here on the net...however....the seller did not mention to me the "high noise pitch" the monitor emitted. Fortunately I was able to return the monitor back to the seller...but I am looking to purchase a monitor once again.

I have a few requirements, some preferences, & here's the deal:

-Monitor can't emit any high pitch noise (normal IBM/Mac/Amiga monitor "hum" is acceptable....but a piercing high pitch noise is not acceptable)
-I would like a model with the adjustment buttons (knobs) facing the front of the front of the monitor
-I would prefer a monitor that was made in Japan (as opposed to the ones made in Taiwan and Korea). This is a preference, not a requirement.
-No scratches on the screen and in decent shape

Deal

I will pay $100 TOTAL (shipping included UPS Ground COD) for this monitor is it's made in Japan. $90 TOTAL if it's made in Taiwan or Korea. I will make a decision on a monitor to buy by Mon (10/3, 4). Thanks

(I based my price on the fact that the last monitor I purchased was $50...and I got 2-3 offers for monitors at the $75.00 level I realize preping for shipment and UPS cost something...so I considered that in my agreed purchase price.

Here you go <g>

John

------------------------------ snip ----------------------------------
Here are two separate instruction sets to build the adaptor:

----1----
Some games, such as Gauntlet II, allow four player
to play at once. Here are the pin assignments for
the cable. You need two female 9-pin plugs and
one 25-pin plug (don't remember if it's male or
female).

Joystick 3 Parallel Port
----------------------------
1 6
2 7
3 8
4 9
6 11
8 25

Joystick 4 Parallel Port
----------------------------
1 2
2 3
3 4
4 5
6 1
8 24

Parallel port pins 18-25 are all connected to ground.

----2----
```

I missed a chunk of this thread so I don't know if someone posted the

s> I have several hundered of these! Anyone any ideas?
s> It's all ASCII data.

DOS 6.2 reads my ST disks (DS, 10 sectors/track) quite happily with no problems. If you're running an earlier version of DOS then try using Norton Tools or similar to repair the disk.

Failing that why not connect your ST to PC via a serial lead and transfer stuff that way.

There's even a shareware prog out there called Ghostlink which lets you network your PC and ST together.

ATB,
Karl.

What exactly is the problem? The STE/STFM suffer badly from poor connections on the joystick to keyboard solder connections. Just opening your keyboard and resoldering these connections may help.

Be very careful though. The little plastic bits inside the key board can go *everywhere*!

Here's some very INTERESTING, UNEXPECTED news from GEnie
regarding a new agreement that looks like Atari may still be with us
for awhile yet......

Contact: Sega Enterprises, Ltd. Manning, Selvage & Lee
Richard Brudvik-Lindner (for Sega)
(415) 802-3657 Brenda Lynch
(818) 509-1840
Atari Corporation
Sam Tramiel
(408) 745-8824
August Liguori
(408) 745-2069

For Immediate Release

SEGA AND ATARI ANNOUNCE LONG-TERM LICENSING AGREEMENTS,
EQUITY INVESTMENT, AND RESOLUTION OF DISPUTES

SUNNYVALE, Calif. (September 28, 1994) -- Sega Enterprises,
Ltd., and Atari Corporation (AMEX:ATC) announced today an
affiliation that includes several agreements designed to
serve as the basis of future working arrangements between
the two video game manufacturers.

Under the terms of the agreements:

-- Sega will receive worldwide, non-exclusive rights with
certain exceptions to Atari's extensive library of
patents, a number of which extend beyond the turn of the
century. The agreement covers Sega, its subsidiaries,
its licensees, and its customers for more than 70 U.S.
patents and applications, for a fully prepaid royalty to
Atari covering the remaining 7 years of certain patents,
amortized at approximately $7 million per year. Atari
will therefore receive a total of $50 million, less
Atari's contingent attorney fees and costs.

-- Sega will purchase approximately 4.7 million shares
of Atari common stock for a total price of $40 million.

-- Both companies will enter into software license
agreements for a specified number of games that would be
made available on each company's present and future
platforms.

-- Atari will dismiss its legal proceedings against Sega, and each company will release all claims against the other.

The agreements are subject to approval by the United States Department of Justice and the Federal Trade Commission under Hart-Scott-Rodino and to certain other conditions.

"We are extremely pleased with this relationship that has potential long-term benefits for both companies," said David Rosen, Co-Chairman of Sega of America.

"We at Atari are very pleased with this new affiliation. The increased cash position will be used among other things to enhance our marketing position this fall," said Sam Tramiel, President, CEO of Atari Corp.

Atari designs and markets interactive multimedia entertainment systems and is located in Sunnyvale, California.

Sega Enterprises, Ltd., Tokyo, is a nearly $4 billion company, recognized as a leader in interactive digital entertainment media with operations on five continents.

Sounds like Trip Hawkins will REALLY have something to worry about now.....:)

Just a note to say thankyou to everyone who replied to my message about the stuff in the auction, and my probs with the serial port at 19,200. There have been so many, it would take up too much bandwidth to reply individually. Thanks again. I have still not sorted out the serial port, but I haven't had a chance to try out all the suggestions yet !

Cheers.

I still think I'd much rather have an Indy; gotta see how unreasonable
SGI's workstation prices are up here. HP's are *terrible*, and the
price of PC components in Canada is much, much higher. Not to mention
the painful 15% sales tax we have to deal with in Ontario.

I bought my Jaguar in Pennsylvania (low sales tax), and paid about 10%
duty coming over the boarder. Even with the exchange rate, I saved some
cash (it was only $40 less, but still).

21. FTP sites for MIDI patches

Newsgroup: comp.sys.atari.st
Date: 1994-10-01 19:12:09 UTC
From: urbansky@bailey.com
Message-ID: <Cx0DCA.6CL@bailey.com>
Source record: 180044

Forgive me if this is the wrong place to post this question, but it seems the most valid of the choices I have ...

Does anyone know some good FTP sites for MIDI patches? I would very much like to get some new patches for the following:

Yamaha SY77, TG33, FB01, TX81Z
Kawai K4
Korg M1, 01/W, 03/RW (I think that's the name of it)
ART SGX2000

Preferably in MIDIEX or SYSEX format ...

Thanks in advance!

John

22. ST GAMES for sale

Newsgroup: comp.sys.atari.st
Date: 1994-10-01 19:24:48 UTC
From: MPARKHUR@UCSVAX.UCS.UMASS.EDU
Message-ID: <36kd20$aru@nic.umass.edu>
Source record: 180045

For Sale ST versions of the following games:

Midwinter $10
Caesar 10
Castles 10
Test Drive 5
Barbarian 5
The Colonel's Bequest 5
D-Day (USGOLD) 5
Iron Lord 5
U.M.S. 5

If you have any questions about any of the games, I'd be happy to give you an honest description & assessment.

No boxes, but I have the docs for all these.

I am willing to haggle a little; make me an offer if you don't like the posted price. Shipping is negotiable.

e-mail me at: parkhurst@polsci.umass.edu

Another point worth noting is that the ICD Pro utilities (the ones you have to paye extra for) have software for doing CD-ROMs (but not very well) and Flopticals. They probably have support for removable media in general (like Sequest drives). I'm not sure 'ordinary' HD software can cope with these.

Roland.

These are the JVC units. I have seen three of them, and they all whined
a bit (though I am not bothered by it, I could see how room acoustics and
individual taste could make it annoying). They are the best SC1224 monitors
in terms of picture and vivid color, IMHO. Perhaps I just saw three
exceptions....

I get around the whining problem by cranking up the sound :-). I have my
STs hooked to a small amp and some decent speakers, so games really boom.
Good luck.

From: mbates@netcom.com
Message-ID: <mbatesCx0oKA.IH6@netcom.com>
Source record: 179904

I have for sale A STacy 4 with Hard drive interface. Any Embedded SCSI drive will work in it (3.5" form factor). It has the power supply and is in good shape. No problems with it whatsoever. TOS 1.4 DSDD floppy internal. All ports just as a regular ST. 4 MB RAM, of course.
I had a buyer but I seemed to have lost track of him. Price is $600 plus shipping. Shipping overseas will probably run about $100.
All offers considered. Please state whether your offer includes shipping.

I would be interested to know if you were booting from the internal HD through the Atari handler with all that other hardware hanging off the computer. I suspect that with the internal HD set at device 3 that you were not booting from that drive. Now if it is the case that you were not booting from the internal drive then I will say to you that I have no argument with your statements. Also I would appreciate knowing the DIP switch settings to set up the internal HD so that it is not the boot drive.

II
I have some software I don't use much anymore and would rather sell it than
have it sit here. Some of it I do use, but not much.
All include original manuals and U.S. shipping.

Cheap Stuff:
Cad-3D (The very old original collector's item! (:) - $5
Airball Construction Set (works on Falcon w/ backwards) - $10
Spectrum 512 Paint Program (original spiral bound manual) - $10
NeoDesk 3.0 (make to 3.03 with patch. Good for ST, no Falcon) - $10
Aegis Animator (now PD, but the book is helpful) - $10

The Higher Quality Stuff:
Man Hunter: New York (Adventure by Sierra On-line) - $20
Lemmings & Oh No! More Lemmings Double Pack (Brand new.) - $30
(I have it for the Mac now)
The Best Stuff:
True Paint (for any ST/TT/Falcon. Like new w/o warranty) - $45
X-Or Universal Midi Patch Librarian (ver 1.12 is 6 months old) - $75

Send E-mail if you need any info.

40. PORTFOLIO CABLE WANTED! And Info on Install

Newsgroup: comp.sys.atari.st
Date: 1994-10-02 08:14:35 UTC
From: krilov@u.washington.edu
Message-ID: <36lq5b$a0j@nntp1.u.washington.edu>
Source record: 179914
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I just recently got a 486-66, and would like to be able to use my portfolio to upload files to it. Where would I be able to find a cable for doing this, and would I need any special software, or other hardware for doing this.

Is Toad Computers still in business, and would this be something that they might carry?

Also, if someone has one they would like to sell, I would be interested.

Thank you,

Krilovsky Kreutermann

41. Looking for Pilot eSTeem

Hello,
I'm looking for a good object oriented programing tool that I could
use to quickly compose music theory teaching tools. I recall reading
something in an old ST magazine about a program called Pilot eSTeem. Has
anyone out there ever used this program? Is it still available?
Basicly I'm looking for something along the lines of a Logo language,
but I'd like to have a little more freedom than the usual if/and/or conditions.
It would also be nice if it were able to keep fairly large chunks of data
in memory for future access within the application (i.e. Scoring...and
corrections).
Please...if you've any experience with Pilot esteem...I'd like to
find out who you are so I can ask a few questions before buying (if it's
even available any more).

Brian

> Solution?

Really depends on what your trying to achieve.

If all you want to do is to move files from the Atari to the PC's hard disc
without the use of floppies then try GHOSTLNK.* which conatains two programs.

You link the ST to the PC using a null modem cable then there is an executable
to be run on the PC and a program to run on the ST.

Once setup you can access the PC's hard disc from the Atari as if it was
another of the ST's drive partitions. Just install the icon on the Atari
desktop double click and hey presto your looking at the PC's drive.

Whilst sitting at the Atari you can make folders. move, copy, delete, unarchive
files across the link etc but you cannot sit at the PC and do the same to the
Atari's drives.

Regards

I am helping a friend liquidate some of his inventory. He used to be an atari resseller but had to close up. The following items are a partial list. I will be helping him get a more complete list of all of the hardware and software in the next week or two. If you whould like a complete list please E-mail me at mccarter@europa.com I realy dont want to post a multi page ad here and cause anyone any dificulties.

2 Atari 1040st computers
1 Atari mono hi res monitor good for Midi usage
1 Atari daisywheel printer
lots video switch boxes, from atari to multisych w/ audio outputs (rca)
lots of atari software
100 copies of Analyze spreadsheet
frames for external floppy drives and external scsi boxes. from 2 to 4 drives

a
PER box. You add power supply(some use IBM style) $18 each

If you request the main list it will have what is being asked for as far as price goes. Please send me E-mail.

Also available are original atari power suplies and misc parts from components to complete computers in as is shape.
Also there are a couple Jaguar systems new in box and a bunch of lynx software.
and one complete atari portfolio system with memory card 128k (use as A:drive)
, parralel board for printing and transfering files to main computer.

thanks for your time
mike carter

I have been using Teddy Term 2.12 and am totally satisfied
with it! The only thing is that Mark Matts the author has had to quit
supporting it! He had to sell his system because of money problems!
At least that is what I heard. TTerm2.12 is available on aaue, and
I am sure that Mark could use the small Shareware fee he is asking
for it! Might even get hin back into ST, if he get enough of them!
It was the only comms program that could convince me to switch
from Flash 1.06!

This has been discussed several times in the last months in all Atari newsgroups I read. Seems like it's time for an Atari UUCP / Mail & News-Systems / Mail & News-reader FAQ! Shall I make a try? I've tried all three systems I know about: Hermes, UPoint and Taylor. Maybe with a little help from the authors/author of the port, we could bring up something which would be helpful to all uucp-newbies. Since the shlink seems to be kind of Atari uucp center (UPoint and the Hermes uucico are developed/maintained here in Elmshorn, and at least one site is running Taylor 1.03) this should be a good place to start the FAQ.

Ole, Stefan, J"urgen, agreed?

Frank.

While going through the Amiga conferences on the NorthAmerinet,
I found this regarding the recent release of Pagestream3 by
SoftLogic this year. As you probably know, they won't commit in
releasing a new Atari version of the popular desktop publishing
program - but if this is how they treat their Amiga customers, then
good riddance to them!

Subj.: Pagestream 3.0a
Area: F-AMIGADSKTOP |60

SPLIT: 24 Sep 94 15:29:08 @101/337 3 01/02 ++++++++++

I have downloaded the first of what I can see will be many, many
fixes for the premature birth of Pagestream 3. The program, from a
commercial standpoint is utterly useless in its (most) current form.
A lovely manual, and millions of un- or ill- implemented features
will not excuse, let alone justify the state of the program. A
Ferrari without an engine is just another heap. As a professional
who survives solely by my design/publishing business of some 5
years, I have neither the time nor the patience, let alone the
capital to finance SoftLogik's magnum opus. IF it ever works, it
will be a useful tool, although it has seious conceptual flaws (the
font handling for one big one).

For another, I am not used to paying money to participate in a
development project, no matter how dressed up. It is cold, hard fact
in life that time is money, and Soft Logik has had the use of a
great deal of it in advance of the goods it paid for. Since the
product is of no use as advertised (not to say hyped) I think it is
pretty cheeky to tell your customers that all will be well someday.
Lest you think I exaggerate, I include here, the ReadME text with
the 3.0a "Update". From a business perspective, I will have to wait

until the emperor gets dressed before I comment on his wardrobe.

With a heavy heart, I lament another titanic gaff in the Amiga
software development saga.

--Ken Ryan

WELCOME TO THE PAGESTREAM 3.0a FREE UPDATE! September 22, 1994

CHOOSE MACROS/!DISPLAY README FILE TO READ THIS FROM WITHIN
PAGESTREAM3.

CHANGES FROM 3.0 TO 3.0A ARE LISTED LATER IN THIS FILE.

A LIST OF UNIMPLEMENTED FEATURES IS INCLUDED AT THE END OF THIS FILE.

Here's the first in a series of free update patches to PageStream3.
This update implements more features and fixes problems with the
initial release.

The most important new feature is the implementation of frameless
text objects.

Text is still very slow to type and format. (It hasn't changed in
this version.) Text redraws are smarter now so changing text
attributes is easier now.

We recommend not attempting the tutorial lessons until version 3.0b
when all the tutorial files will be included and the necessary
features will be implemented.

CHANGES FROM 3.0 TO 3.0a

TEXT:
- Frameless text objects implemented! Just click on the page with
the Text tool and type!
- Eliminated extra text redraws when applying attributes!

[Length Exceeded - Message Split by Mountain Reader II]

Newsgroup: comp.sys.atari.st
Date: 1994-10-02 17:49:00 UTC
From: dan.dreibelbis@balmybeach.tor250.org
Message-ID: <a1623ba7@balmybeach.tor250.org>
Source record: 179924

[Continued From Previous Message]

- Current attribute defaults are now implemented. (You can now place the insertion point (cursor), change the font or other attributes, and then type, without reverting back to Triumvirate.)
- You can now repeatedly use the arrow gadgets in the Edit palette to change the type size and other text attributes.
- Changed default alignment from justified to left.
- Amiga keyboard shortcuts now work.
- You now get a normal height cursor when you click in a frame.
- Right indent tab are now done.
- Stopped text from being displayed outside of its frame.

PRINTING:
- New custom Epson driver included!
- HP color variants now supported.
- PaintJet problems fixed.
- Some Canon variants are now supported. Choose the Epson driver from the Printing Preferences' Type popup, and choose the Canon model from the Model popup. (These Canon printers are similar to Epson printers.)
- The basic 13 resident PostScript printer fonts are now supported for PostScript printing, but the style variations are not. (ie: Pala(Palatino) will print correctly, but Pala Italic will not; it will print as Palatino normal. This will be corrected in 3.0b. Times Italic, Times Bold, Times Bold Italic, and Triumvirate Bold (Helvetica) will print correctly though, because they are in a different font format.)
- Printing Compugraphic fonts to PostScript now saves the generated PFB versions of the fonts on disk. This solves the timeout problem. See the NOTES section for important details.
- Top offset problem fixed. (You may need to adjust your offsets.)
- Improvd Floyd-Steinberg dithering.
- TO color percentage fixed for PostScript.
- Collate now defaults to off.
- Do Not Print flag (Edit palette, Object/Edit) now implemented.
- Parenthesis problem (PostScript) fixed.
- Multiple copy problem (non-PostScript) fixed.

MISC:
- Tab key problem fixed.
- Enforcer hits on changing edit palette modes fixed.
- Object selection (it selected the stack of objects) fixed.
- Select and move immediately problem fixed.
- Click click drawing for Column tool fixed, and all click click

drawing made less sensitive. (Click click drawing is the 2.2 method
of drawing objects instead of 3.0's drag draw method and is still
supported for those who haven't learned the new method yet.)
- View Prefrences Scale problem fixed.
- Toolbox Prefs: Pie and Arc are no longer reversed.
- Toolbox Prefs: Opaque/Transparent is no longer ignored.
- Fixed the Set Grid pica problem.
- Font Prefreferencess: Cache settings are now loaded.
- Autoscroll now works when resizing objects.

POSTSCRIPT FONTS:
- Fixed enforcer hits when adding ABF files. YOU MUST UPDATE ALL
FONT PATHS WITH ABF FILES IN THEM OR THEY WILL NO LONGER WORK.

COMPUGRAPHIC FONTS:
- Intellifonts should now rotate/slant/twist correctly.

FILTERS:
- ASCII and IFF FTXT tabs now import correctly.
- PageStream2 document filter now loads frameless text objects
correctly.
- An expanded PageStream2.fontlist file is included for greater
compatibility.

BME:
- Trace effect now works with lines and curves. (File requester
wouldn't open to let you save your traced drawing.)

NOTES:
- There are improved help files available for this version in a
separate archive. They were not included with this archive due to
space limitations. The other archive will be available a few days
after this archive.
- The other archive also contains the FontListV2Analyzer utility.
This program will examine your PageStream2 FONTLISTv2 file and add
the names of your fonts to PageStream3's PageStream2.fontlist file
so that your PageStream2 documents can be opened more reliably. (If
an alert stating font ######## not found appears when you open a
PageStream2 document, you need this utility.)
- If you print more than one Compugraphic font to a PostScript
printer, it may still timeout the first time you print a CG font
because the PFB generation is slow. Print to disk the first time you
print a CG font to avoid this problem. Or just print the document
again if it times out because the second time it won't have to
generate the PFB. Once the PFB is generated, you will never have
this problem again. (You need about 35K of hard drive space for each
Compugraphic font you want to print.) Note that printing Times or
Triumvirate will not create a PFB file because these fonts do not

Source record: 179925

[Continued From Previous Message]

need to be downloaded.
- If you get error message 93 when printing a Compugraphic font to Postcript, Agfa's Intellifont engine will have failed. (We're looking into this problem now. It usually occurs when printing more than one CG font that doesn't already have a PFB file.) Click on Ok to allow the print job to be finished. If it fails and there are more CG fonts to print that don't already have PFB files, it will put up the alert again for each remaining font. When it is done printing (it won't print the fonts it failed on), quit PageStream and restart it. (The Intellifont engine must be re-initialized.) Print the document again. We are investigating this problem, but once you have the PFB version of each of your CG fonts created, you will never have this problem again with that font. We apologize for this inconvenience.

UNIMPLEMENTED FEATURES

To help you know what isn't finished, here is a list of unimplemented features:

- Append
- Save Template As
- Revert
- Plate Control
- Place
- Export text - not all formats export yet
- Paste - text in text frames is not pasted
- Undo - only for object features so far
- Find and Replace
- Spell checking
- External text
- External graphics
- Send to Editor - only for BME (bitmapped pictures), not for text
- Document Structure - you can't drag yet. Click on icons to create.
- Layout/Information
- Facing Pages
- Greek Text
- Bold and Italics - applied bold and italics aren't done yet,

and the buttons do not select the designed styles.
- Outline
- Weight commands
- Text Line/Fill
- Paragraph Format - bulleted paragraphs are done.
- Auto Hyphenation
- Insert Soft Hyphen
- Conditional Break
- Picture fencing
- Object/ Information
- Gradient/Shape/Radial - done to PostScript. Only linear
0,90,180,270 gradients done to screen and non-PostScript
- Bitmap fills - done to PostScript, but not screen or
non-PS
- Misc line/fill - most are done to PS, but not screen or
non-PS
- Trapping
- Text Wrap - offsets and modes 3 and 6 are not done.
- Text Anchor
- AutoBackup
- Typographic Prefs
- Edit Hyphenation
- Edit Kerning
- Font/Style palettes - partially done
- Page palette - only shows page icons
- Pen tool - can only draw basic line segments
- Reshape tool
- Edit palette - done except for multiple selected objects
- Primera driver - use Preference driver for now
- Canon driver - use compatible Epson or Preference for now
- Landscape printing
- Double/triple click
to select text

Tip: if you press Return to start a new paragraph in a frameless text object or text frame, the insertion point (cursor) will not appear to advance to the next line. Don't press Return again. It's just a redraw problem.

We hope you enjoy using this updated version of PageStream3. We are committed to giving you the best possible software for your Amiga computer. Thank you for your pati

Dear Binary Software (I know you inhabit this net):

I was recently able to find a brand-new copy of GenEdit v. 2.00
from my local Long and McQuades (which they let go to me for $50.00).

Unfortunately, I'm having a few problems with it. Seems the
configurations designed for the TX802 and DX7II WON'T recognize my
DX7s (which, although it is non-multitimbral, is structurally
identical to the DX7II). I can download stuff to the computer, but
when it's uploaded the computer tells me the file is corrupt - and
when I DO upload it, the sounds come out two octaves below their
normal pitch (thankfully, I have Super Librarian backups). And it
won't respond to the editing templates at all. Also, some of the
drivers tell me there's a MIDI error - namely, it's expecting to see
an F0 but it's getting an FE.

The same seems to be true with my Roland D110 (although I still
haven't done as much fiddling with it as I have the DX7).

Also can you tell me:

What is the latest version available for GenEdit? And if so,
will it allow me to load it onto my hard drive WITHOUT having to use
confirmation with a key disk (a major pain). Could you, in future
editions, dispense with the key disk in ALL your programs and
replace it with a better form of copy protection, like let's say
pre-installation (like Gribnif uses with their programs). If not,
how much for a backup key disk?

As for the system I'm using, it's an STe, TOS 1.6, 4 megabytes,
using an ICD LinkII host adaptor attached to a homemade 40-meg hard
drive - I'm also using Warp9 and Neodesk4 (I also use Geneva, but
that is not used when doing MIDI work on my system.

Any advice would be MUCH appreciated.....

... That was the camel that broke my straw back - Fred Flintstone

55. ST printing enhancement

Newsgroup: comp.sys.atari.st
Date: 1994-10-02 18:39:07 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <36muob$1u6@mailer.fsu.edu>
Source record: 179852

Following up on my post about the Canon BJ200e inkjet printer I just bought,
I have been testing some printer accelerators. The Magic Spooler
(ms_spool.zip on atari.archive) is a combination spooler/accelerator/print-
to-file program. Ffprnt is just an accelerator. Apparently, TOS includes
some braindead code concerning the transport of data to the parallel port.
These programs are supposed to help fix this.

Here are the results of printing a fairly complicated 1 page document from
Pagestream 2.2b (lots of graphics and different fonts), in minutes:seconds,
on my 16mHz MegaSTE:

No accelerator: 7:49 (!)
Mspool, spooling turned on: 3:02
Mspool, spooling not on: 2:34
Mspool (on) + ffprnt: 2:13
Ffprnt alone: 1:42

So, I'd say Ffprnt is pretty much a "must have" for those that print a lot!
It is a tiny auto folder program, and has not caused me any other problems.
Magic Spooler is still a handy program to have, particularly for printing
to a text file.

There is a commercial product called OutBurst that proports to do the same
thing as Ffprnt. Anyone played with it?

Source record: 179929

I don't have any recent issues of Atari mags around right now, but
monochrome monitors can be had very cheaply, I believe. A
40 meg hard drive for the ST is more expensive than the IBM
because: 1) you need to pay for a DMA to SCSI cable (the Link
which is about $90) and 2) the external case costs you.
However, Toad sells hard drives at fairly decent prices and
there are usually used ones for sale on the Net.
As far as MIDI, I do not use my computer for MIDI, but I have
heard that people are quite happy with their STs for music.
Some people will answer your question pertaining to MIDI
software I am sure.
One more thing: there are monochrome emulators for color systems.
They work, but I am not sure I'd recommend them.... however, you
can download a pd/sw one like Sebra and try for free.
Hope this helped. If you haven't gotten Toad Computer's catalog
then get it! E-mail them at: toad@genie.geis.com. They have
tons of stuff and could help you get the software you need!

59. NeoDesk4, problem with groups

Newsgroup: comp.sys.atari.st
Date: 1994-10-02 22:03:35 UTC
From: tdcflcn@infinet.com
Message-ID: <36nann$imi@rigel.infinet.com>
Source record: 179931

First let me say I love Geneva and NeoDesk 4.

I have one problem, maybe it is not a problem, maybe its me.

When I drag an Icon to a group the Icon does not change, I can save the group and close the group and open it back up and the icon is O.K.

But if I select the icon then take the "Change Icon..." option from the "Options" menu and change the "Name in window:" to something more meaningful the icon changes in the group window to the default program icon. Is this a problem or am I doing something wrong?

Thanks for any help.

I would like to see such a FAQ here on the net. I would like to know how I could carry usenet messages on my BBS. I have found STUFIT which converts usenet messages into FIDO comp, which my BBS software handles as an internal message base format. I just need a way of gettting usenet messages to my BBS. I have looked at mercury and hermes, and both seem rather difficult to setup and maintain.

63. HS Modem

Newsgroup: comp.sys.atari.st
Date: 1994-10-03 00:51:41 UTC
From: kfason@csn.org
Message-ID: <Cx2nq5.4DH@csn.org>
Source record: 179934
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

A friend and me are trying to get something figured out. He has a Mega/STe, he also has RATsoft BBS running with a USR v.34 modem. It works fine on Modem1 @ 19200, but since the modem can do 28800 he wants it to be locked @ 38400 or preferbly 57600. We played with HS Modem a little. WHile RATsoft sees the modem on modem2 with no probs, the Modem2 does not have a ring indicator. But with playing HSModem, I read in the docs (MFP_X.TXT) that you could get 57600 on a 8Mhz or 16Mhz 68000 CPU on Modem1. It then has something untranslated under it, so I assume that is the method... How do I get HSModem to redirect the Modem1 to go past 19200?

We tried configuring it, but with the english being poor we could not figure it out too well. but we setup MFP.PRG like this:

FASTINT: Yes
RSVE: NO
HISP: NO
REPL: (this one we had probs with, how do you input it to redirect say 19200 to 57600? we tried 19200 / 57600, 19200/57600, and the reverse, but when rerunning MFP via SETTER.TTP it only shows the second number)

DTR:On
RBL:1024
TBL:1024

any help is appreciated!

65. PLAYMPEG v0.68

Newsgroup: comp.sys.atari.st
Date: 1994-10-03 02:12:13 UTC
From: mdg@ukc.ac.uk
Message-ID: <10555@gos.ukc.ac.uk>
Source record: 179936
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Announcing the release of 'PLAYMPEG v0.68' - *THE* Falcon MPEG player.

PLAYMPEG v0.68 should be available on most popular FTP sites within the next
few days - the version uploaded is greyscale only, to obtain a colour version
you can register by sending 5 pounds (10 pounds for non-UK residents to
cover postage and bank charges) to the below address:

Martin Griffiths,
7 Long Acre Close,
Canterbury,
Kent,
CT2 7TE.

Features added v0.60 -> v0.68.

- Plays all MPEG files (P/B Frames are skipped but all I frames are displayed)
- Restores the screen resolution correctly when using Screenblaster(at last!)
- Handles large MPEG files (upto 480x384) - this limit is imposed by the Falcon
hardware, since True Colour cannot have a horizontal resolution of more than
480 on a standard SVGA Monitor).
- Error tolerance is again(!) much improved, with no loss in speed,
(i.e. 17.62 FPS for MJACKSON.MPG))
- Works on ALL accelerated Falcons, including 50mhz DSP, 40mhz CPU!).
- No annoying DSP '.LOD file 'anymore :-).
- Additional program 'INFOMPEG' provides detailed information on MPEGs.

I urge all users to register this program, 5 pounds is not much to ask for a
program which is heading towards a full DSP based implmentation of the MPEG
standard.

Cheers
Griff

I'm buying several used games from a gentleman in Virginia, and a couple of things have come up. Hopefully some netters can help me out.

1. How many disks does Operation Stealth consist of? The seller can only locate three, and is unsure if this is all of them. I would rather not play through 3 disks and find out I'm stuck....

2. Does anyone have the game Deuteros? If so, could I arrange to get a copy of the manual(s)? I can prove ownership of the original disks (when I get them :-). The seller feels that he has lost his. I'm sure I could think of a favor or gift I could provide in return.

Please email me directly. Thanks in advance for any assistance.

I believe you misunderstood (perhaps the author was refering to his RSVE
hardware mod, which can attain such speeds on Modem1). Modem1 cannot
reliably go faster than 19200 without hardware modification.

No ring indicator on Modem2? Does that mean it is missing a line or
something? There are docs on how to fix problems with both Modem2 and
Serial2 (a GAL programmer is needed). Email me if you are interested.

68. Just got HD, how connect

Newsgroup: comp.sys.atari.st
Date: 1994-10-03 05:26:01 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <10031994.052601@empyr.dircon.co.uk>
Source record: 179861

Hi Everyone, especially those who pointed me in the right direction about what to buy / leave at the auction I've just come back from !

I have bought....a Rodime RO3128T Type 04 SCSI HD, 120Mb
and... a Lion 320VC External SCSI subsystem.

I paid 25 UK Pounds (about 38 US$) for the drive and 12 UK Pounds (18 US$) for the box with the connectors, PSU & fan.

Right, here comes the inevitable....<g>...

The drive spins OK, I can't test it yet as I don't have a host adaptor.

Anyone know how to plug them all together ?

The SCSI box has room for 2 HDs (it has 2 SCSI connectors, power plugs etc) It has 2 numeric displays (mechanical) on the back, with little + and - buttons on each one. By pressing either the + or - buttons, the number cycles from 0 to 9 (or reverse, if you press the - button !). These appear to be multi-way switches. From the back of each switch comes 4 wires, colored Red, Blue, Yellow, Black. These are grouped into three pairs with Black common to all. Nothing else is connected to the switches. Each pair of wires is terminated with a tiny 2 pin connector. These look as if they could fit onto the group of 6 pins on the back of the drive, like this..

1 2 3 |▯▯▯

Assembled in Scotland
30144068 Build Level 007 Option K
LR50240
8926 127
0688-1-03 0140-5-15 0260-5-16

What I would like some kind soul to tell me is....HOW do I plug it all together and what do I do next to get it working with my STFM ?

I understand I will need a host adapter, ICD Link or something like that, and some software for running the HD. Where can I get these things ? (preferably in the UK, but I'll buy from anywhere !).

Could I ask you to reply via e-mail please ? As my sysop is just about to drop the atari echos from his system. My address is:

Kevan@empyr.dircon.co.uk

Thanks a lot friends.

Cheers.
Kev

P.S. The auction was worth a visit, but it was quite funny watching some people bidding up to 90% of the full retail value of the gear, and there was only 24 hours guarantee ! One guy even started bidding against himself ! <g> Prices were, well, disappointing. They had stuff like 486sx25, 1Mb RAM, 170Mb HD, 1.44 Floppy, 256k VGA card, keyboard, all brand new, these went for 320 UK pounds (500 US$), BUT they had NO monitor, mouse, software, support or guarantee. Various cards went for about 10 UK (15 US$), 14 inch SVGA 1024 x 768 - 130 UK (200 US$) There were 286 systems, used (very !), 5.25 inch drives, 640k etc, these went for between 30 UK and 70 UK (45 & 110 US$). It seemed a good place to go if you were building your own PC system, as motherboards & drives etc were quite cheap. The ONLY bit of Atari kit they had were 3 internal floppies, used, not sure if they were SS or DS, but they went for 8 UK (12 US$) each.

Source record: 179941

Once you get your ST up and running...I can assure you that you won't find a better seqencing machine on the market for less than you'll have sunk into it. As for the High Resolution requirement for most of the better sequencers...you'll be glad of this. The high res is better on your eyes, and gives you much more real estate in terms of screen area to work with. There are quite a few sequencers that will work in Color...with tos 1.00 too. Dr. T's KCS Omega should run fine on your system as is. Master Tracks Pro also will run on your system as is. C-Lab's Notator and Creator also will work on a Color Monitor with TOS 1.00. You won't be able to use Soft Link (C-Lab's older multitasking system) with tos 1.00, but the sequencer alone will run just fine, and since you're only running one meg of RAM...you'd never find SL very useful anyway.
Basicly...tell me what kind of work you want to do with your ST...and I might me able to help you see where to sink your cash. There is a lot of great stuff out there you can run AS IS...and some SUPER stuff if you don't mind upgrading your TOS and springing for a mono monitor.

Brian

72. ATARI COMPUTER WANTED/NEEDED!

Newsgroup: comp.sys.atari.st
Date: 1994-10-03 07:29:29 UTC
From: process@cgsvax.claremont.edu
Message-ID: <1994Oct2.232929.1@cgsvax.claremont.edu>
Source record: 179940

I am looking for an Atari Computer. I can use any flavor that you might want to part with. I have only one stipulation: It needs to have one meg of RAM. It does not need a floppy drive or a pwer supply if it is an old 520 upgraded since I have extra floppies and power supplies. TOS 1.4 or newer would be nice, but not required. I cannot afford a TT or Falcon, but a Mega STe is a possibility. I need it for my BBS, so it must be VERY RELIABLE.

Leave me your offers/trades in email.

I would be willing to trade Pagemaker 5.0 for the MAC or Laser C for the Atari or somehting else.

Thanks,

Alan Deffenderfer

That would be greatly appreciated as I've done a lot of searching this weekend
without finding them. On Hensa please for me.

> No. The one on GEnie is 1.0 (I think, maybe I should look again). Where
> is v1.2xx available? Is Edith still freeware?

The latest Demo should be on Umich, it's no longer freeware, but
semi-commercial, good program though.

74. Help with SuperCharger

Newsgroup: comp.sys.atari.st
Date: 1994-10-03 08:04:44 UTC
From: bjr2@Ra.MsState.Edu
Message-ID: <36odus$6ps@Tut.MsState.Edu>
Source record: 179943

I have a Super Charger and two different versions of sofware for it...
1.3 and 1.4. I recently exchanged my old 1040ST for a new 1040STe and
now my Super Charger doesn't want to work. The Ram Drive Tool Box and
and install program works fine...but the PC side of things reacts rather
strangely. It initiates as usual...but then the keyboard locks up.
Sometimes...and very rarely...the Supercharger will react and boot DOS,
but that's only after pounding on the return key several dozen times.
I don't really think there is any hardware problem with the SuperCharger
itself...because I can use its memory as a ram disk with no trouble what
so ever. I did get it to work once by switching from the external power
supply to the old leeching off the joystick port method. Now that wont
work either. Any suggestions? Is my problem in the fact thay maybe the
software is designed to work on and ST and I've got an STe?
I'm all out of options it seems...as I've tried fresh cables..fresh power
supplys...every place in the DMA chain...with a Hard Drive...without a
Hard Drive...Color...Mono...and every thing i could think of to pinpoint
a problem. It seems to me like the supercharger is on stand by as it should
be, but for some reason the keyboard commands aren't making it there.

Also...I've noticed that several games I have that ran flawlessly on
the ST refuse to acknowledge the keyboard and joysticks on my STe. One
example in particular is Dragon's lair. Is this normal? Maybe I need
to have my STe serviced (even though it is less than half a year out
of the new plastic wrapper)?

Thanks,
Brian

I've solved this by going into the Icon Editor and copying/creating a
new icon with the new name assigned to it.

Firstly, actually, I write a little :

People of the world; australian Atarians are not _all_ this dense.
(We shipped Roger off years ago 8)

>Hi Lars, well the MSTe peoblems surface again. Most people on the net
>disagree with me but i will state it again. I have been told by my
>supplier in Western Australia that the HD controller in the MSTe in not
>fully SCSI compatiable.

Ooh. Paragon. Lovely stock of technical expertise we have there.
Suffice it to say that they're not what you'd be inclined to call
rational.

>My experience with this problem leads me to
>believe that the internal controller interfers with any ICD controller the
>reasult of this being the loss of the last partician on the ICD controlled
>HD.

This is of course total gumpf. How can the controller know that the data
it is currently transferring is a partition map?

>So i presume that when you only have one partician on the HD the MSTe
>will not see it at all. So you have proved my theory, in that your
>streamer is seen as the first and only partician and thus cannot been seen
>at all.

Except that sequential-access devices don't look like random-access
devices, nor do they have 'particians'. The only proof here is your
irrationality.

>I have a switch on the MSTe to switch of the internal HD. This
>helps as some older ST floppy based programs will not tolerate a HD in the
>loop. I rearly do not know what you can do about this problem.

Sounds like he should a) check his termination, and b) check that the
SCSI ID of the tape unit is different from that of the disk and the MSTe.
(ie not 0 or 7, and probaby not 6 either if he has an ICD adapter)

>The only
>thing I can suggest is that someone mentioned an Atari SCSI controller, I
>was not aware that Atari made a SCSI controller, but as i said someone
>mentioned it a couple of days ago. I presume that an Atari controller
>would work on the MSTe.

The MSTe has an Atari SCSI controller inside it, funnily enough.

>To those of you who wish to tell me that all i have said is rubbish rember
>that all i have said is concluded from physical experimentation not from
>the theory so if you wish to critise me do so from physical experiments on
>a MEGA STe otherwise don not expect an answer.

shrug. I can say, from purely written eveidence, that you're totally
loopy, but to keep you happy, I fix Atari machines on the side, so to
speak, and I've had my share of MSTe's through, none of which exhibit
any 'vanishing partician' problems.

>Also if the guy who mentioned the Atari SCSI controller reads this please
>pass to me and Lars what info you have on it and were to get it as i need
>one too.

A simple question to test your intelligence : how many particians do you have?

> How about being able to change font size without changing style/face?

I think you can do this by calling up the Font Panel and switch the 'permit' button (the small black circle) on all but the font size sections OFF... Choose the font size you want and save it as a function key....

The sections with permit off aren't affected when you change point size in this way.... Good, eh?

In regards to my earlier post, above, I got a really nasty (and very childish) email flame from James Baumgardner <jbaumgar@bronze.coil.com> which suggested I get a 'real term program' or 'feign computer literacy' and not to 'whine' about my 'inadequacies.'

Lest anyone else in this forum share the same immature views as James, allow me to reiterate that this was a request not for -my- benefit but for those others who may not possess sophisticated term programs. As many of you know, I relay all Usenet Atari newsgroup posts to GEnie. Posts with extremely long text lines may end up cropped and hence unreadable. Since I don't have the time to 'fix' each message before sending it on to other services, I just bypass those with no C/R's, and consequently they don't get forwarded.

So that was the reason for my request. I apologize if it sounded like a 'whine' but it was only for the benefit of other users.

And of course, users may continue to format their messages any way they please. It's yer choice, after all. :)

Cheers,

-Hutch- @ Fair Dinkum Tech

95. Problem: Apple 300 CD-ROM and Egon! CD Utilities

Newsgroup: comp.sys.atari.st
Date: 1994-10-03 15:56:25 UTC
From: Ton van Overbeek <TVOVERBE@ESTEC.BITNET>
Message-ID: <94276.155625TVOVERBE@ESTEC.BITNET>
Source record: 179883
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I recently bought an Apple CD-ROM to be connected to my TT. As software I bought the Egon! Cd Utilities, Version 1.50. Of course, the combination does not work (otherwise I was not posting this message)

The TT is talking to the CD-ROM via the SCSI bus. The CD-ROM identifies itself as 'SONY CD-ROM CDU-8003A' when sending the SCSI inquire command. I checked this with both AHDI (CD-ROM as SCSI target 1) and with the SCSI example program from the German Profibuch.

Has anybody gotten this Apple CD-ROM to work, and if so with what software ?

Please reply also by email, since our newsfeed has been flakey the last few weeks.

Ton van Overbeek, tvoverbe@wk.estec.esa.nl

96. Problems, ideas, announcements wanted!

Newsgroup: comp.sys.atari.st
Date: 1994-10-03 16:00:48 UTC
From: msh@mserv1.dl.ac.uk

Source record: 179866

Hi,

I have created my own Atari Page on the Web and would as part of this service to the Atari community like to invite you all to send your ideas for things to include. I would also appreciate any problems you would like solving (not personal) as I will do my best to find the answers for you. Have you any Atari related announcements to make? Then this could be the place to put them, although less than two weeks old this page has already been accessed by over 600 people and this is bound to increase soon with a mention in Future publishings new magazine ".net:The Internet Magazine" and I believe the next issue of ST Format.

Have you written any articles yourself that you would like to submit, or would you be available to answer peoples questions? Let me know if you think you can help me in providing this service to the Atari public. This is not a commercial enterprise but is done in my freetime and there will be no money involved.

If you have written any softwares reviews for submission, have an area of expertise or just want the new piece of software you've written to reach the public quickly then let me know. I promise to try and answer all letters and to evaluate all submissions for inclusion. Hope to hear from you all soon.

Thanks,

Mark msh@dl.ac.uk

Hi all,

I have some Atari floppy disks which contain files which are not showing up when I look at the folder/directory they should be in. Are there any tools out there to examine Atari disks and possibly restore files?

I heard that MS-DOS 6.2 will read Atari disks. Is this true? How similar are the disk/directory formats? Can I use, e.g. Norton utilities to read/fix Atari disks?

Feel free to mail me for all the errors you see (in the contents and also
in the form because I am French and the English language if no my first
one) or for other information that can be interesting.

Loic

New since last version :
- CD-ROM ROM
- MetaDos v2.4
- Atari archive Mega-CD
- ExtenDOS v1.21 and ExtenDOS Pro
- Egon CD-Utilities

ATARI CD-ROM FAQ

01/10/1994

1 - What driver should I use with my Atari system ?

There are several drivers available :

MetaDos :
Free software from Atari Corp.
Available from atari.archive.umich or ftp.muenster.de (metads24.zip)

The filesystem drivers support ISO9660 and High Sierra CDs, but not
multisession CDs.
The device driver only works for the Atari CDAR504 connected to the
ACSI bus or with generic SCSI CD-ROMs connected to the TT SCSI port.
(Answer from Julian Reschke)

CDROM.XFS :
Free software (Copyright 1992,1993,1994 Eric R. Smith, Michael Bernards
u. Gunther Leis)
Available from atari.archive.umich and other ftp sites.

This driver is a Mint extended filesystem and works on TTs and Falcons.
CDROM.XFS version <0.7 does not work with Mint/Multitos > 1.04.
The current version (0.7) is said to work on Mint/Multitos > 1.04.
It seems to be true on TTs but it does not work with any Mint version
on my Falcon.

CD-Tools :
Commercial solution from Hard & Soft, Obere Muensterstrasse 33-35,
D-44575 Castrop-Rauxel, Germany, Phone: ++49 2305 18014, Fax: ++49 2305
32463

Includes MetaDOS with GEM-based installation program, audio player with
PCM audio data import (only some drives) and custom devices and
filesystem drivers (support for Atari CDAR504 and generic CD-ROMs
connected to ACSI through host adapter, TT-SCSI, Falcon-SCSI,
multisession support (only some drives)).
(Answer from Julian Reschke)

With CD-Tools, you also have a GDPS module and the program Scan-It that
can handle Photo-CD Pictures.
CD-Tools is in German and costs 99 DM.

ExtenDOS v1.21:
Commercial solution from Anodyne Software, 6 Cobbler Court, Ottawa,
Ontario K1V 0B8, Canada.
Available in UK : System Solutions.

Support ST, STe, Mega, TT, and Falcon. Read ISO9660 and High_Sierra
CD-ROMs. It now runs just fine under MultiTOS with no restrictions;
memory protect is OK, and you can run programs directly from CD. It
also runs fine with Mag!X 2.01, with the restriction that the
EXTENDOS.CNF file must be in the root directory.
Support for Multisession Photo-CDs (with Multisession drives).
Configurable cache.

Extendos v1.21 costs $29.95(North America).
(Information updated by Roger Burrows / Anodyne Software)

ExtenDOS Pro:
Commercial solution from Anodyne Software, 6 Cobbler Court, Ottawa,
Ontario K1V 0B8, Canada.
Available in UK : System Solutions.

Like ExtenDOS 1.21 with audio support.

Extendos Pro costs $39.95(North America).

F030_CD :
Fairware from Peter Hilbring, Dietrich Ottmar Stra�e 16, 59597
Erwitte, Germany
Available on ftp.tu-clausthal.de
(/pub/atari/falcon/systools/f030_cd.zip)

This package includes a BOS driver for MetaDOS, MetaDOS 2.3, a
low level SCSI driver (TT & FALCON) and a program named
cd_explorer as exemple of the access of the low level driver.
(Info from Vincent Lefevre)

I�ve just tried these drivers on my falcon with an Apple
CD-300 cdrom and it works without problem.

ICD Pro :
Old versions came with a MetaDOS driver named ICDCDROM.BOS.
The new ones comes with a mint extended filesystem.

Egon CD-Utilities :
Commercial solution from EDV-Service Bontenackels (Germany);
Fax : 02405-74369
Available from several german shops (Ex.: Softhansa Gmbh, Untersbergstr.
22,
81539 Munchen, Tel : 089/6972206, Fax : 6924830)

Multisession MetaDos driver with audio-CD player.
Works with ST(E)/TT/Falcon.
ISO9660 and High Sierra.
Program and CPX for Audio Play.
Audio track to Hard Drive copy in AVR or DVS format.
Support of the Pure C Metados Library.

Egon CD-Utilities costs 79 DM.

If you have some experience with this new driver, mail me.

CD-ROM ROM:
FromCompo (Tel.: Germany : 030-623 82 92; Holland : 04454-6 38 88;
Switzerland : 01-784 89 47; France : 1-47 35 89 66; UK : 0487-35 82;
USA : 415-35 50 862)

It's a Driver plus an interface witch can go in the cartridge port of
every Atari computer and can handle IDE CD-ROM drives.

In Germany, CD-ROM ROM costs 150 DM.

2 - What discs are available ?

There are five Atari specific CD-ROMs :

GEMini CD-ROM :
From Walnut Creek CDROM, Suite 260, 1547 Palos Verdes Mall, Walnut
Creek, CA 94596, USA, Phone: +1 510 674-0783, Fax: +1 510 674-0821,
Email: info@cdrom.com, Ftp: ftp.cdrom.com
Available in Germany from Ingenieurburo Praefcke, Holtzvogtkamp 55,
24220 Flintbeck, Phone: (04347) 7531.

You can find the index of the GEMini CD-ROM on atari.archive.umich.edu.

Bernd Lohrum CD-ROM :
From Bernd Lohrum, Schlossbergstrasse 36, D-66440 Blieskastel, Germany,
Phone: (0171) 4210222

There are two CDs from Bernd Lohrum :
Drachenstarke software : 300 Mb
Tigerstarke software : 500 Mb

Each CD-ROM costs 69 DM (59 DM for MAUS net users).

Wohlfahrtstatter CD-ROM :
From Wohlfahrtstatter, Irenenstr. 76c, D-40468 Dusseldorf, Germany,
Phone: (0211)429876.
This CD-ROM costs 89 DM.

Power CD Volume 1 :
From Compo.
This CD-ROM costs 79 DM.

Atari archive Mega-CD :
From Systems Solutions, Brandt Fernandes (Europe) Ltd, The Desktop
Centre,
17-19 Blackwater St., London SE22 8RS., England;
Tel.: +44 181 693 3355; Fax : +44 181 693 6936;
Email : rperry@cix.compulink.co.uk or gdrayson@cix.compulink.co.uk

This CD is composed of the vast majority of the Atari archive at
umich.edu.
The only things missing are the 8bit section and the GNU minix tools
(whose
filenames are difficult to convert to 8.3 format). The disk contains
some
480Mb of compressed programs, and a further ~115Mb of .mod files which
(hopefully) can be played direct from the CD.

The CD cost 25 pounds. Systems Solutions can take credit cards etc.
which
ought to make things easier for you lot, and they're used to
importing/exporting, so they're more likely to get it right.

(Text taken from the announce on a.a.u.e)

You can also use all the ISO-9660 CDs that exists for the PCs. You won't
run the PC programs but you will access all the text, pictures, and sound
files on it.
The discs already tried are :

Corel Artshow 91 :
~ 1000 scans of paintings (like Manet, Van Gogh,) in 16 and 256
colors PCX files;
All the images from the 91 Corel draw contest in CDR and DIB format;
some midi files.
The PCX and DIB files can be read with Dieter Fiebelkorn's Gem-View
3.xx .

Source Code CD-ROM (Walnut Creek):
660 Mb of program source for MSDOS, windows and Unix.
The March 94 version does not contains the COMP.SYS.ATARI.SOURCES any
more.

Clipart Warehouse

Compton's New Media M.O.S.T. CD-Roms :
Doctor's Book of Home Remedies
KGB-CIA World Fact Book
The Pill Book
The King James Bible
U.S. Presidents

You can view all these M.O.S.T. CDs with Brian Grier Perkp�s
program. (MOST.ZIP, the demo version is on ftp at
Atari.archive.umich.edu).

3 - Can I use Photo-CD on my Atari ?

Of course You can !
To have full use of the photo-cds, you�ll need a multi-sessions drive and
driver and also a program that can handle PCD files.

CD-TOOLS :
The driver from Hard & Soft can read multi-sessions discs and have all
the needed stuff to handle the Photo-CDs.

ColorDisc PCD :
Commercial software from Color Concept, Im Alten Breidt 4, D-53797
Lohmar Breidt, Germany, Phone: (02246) 7132

This program allows you to manipulate the photos on your Photo-CDs, and
save them on hard-disc. It handles Portfolio CDs.
If my understanding is good, it works with metados and a special BOS
file (both included).
It also includes a CD-Audio player.

A demo version is available at ftp.tu-clausthal.de.
ColorDisc PCD works on TTs and Falcons and costs 99 DM.

Studio Photo :
Commercial software from Eurosoft.
This french program can manipulate Photo-CDs.

Gemview v3.xx :
Shareware from Dieter Fiebelkorn, Gr�ner Weg 29a, W4370 Marl-Brassert,
Germany, Email : fiebelko@bonny.informatik.uni-dortmund.de

Gemview is also capable of handling PhotoCD�s. Only in two resolutions
(Base and Base/4 I think)

4 - Can I play Audio-CDs on my Atari ?

Of course You can !

The following programs are available :

CD-TOOLS :
The driver from Hard & Soft includes a player for CD-Audio discs. The
drive must understand SCSI2 instructions(Or CDAR504 or the Apple
CD150).
.

ColorDisc PCD :
It also includes an audio Player.

Audio CD Master 3.0 :
Commercial software from It�s All Relative Software, 2233 Keeven Lane,
Florissant, MO 63031, USA.

This program can play CD-Audio discs on SCSI2 and Nec drives. On
falcon and with some drives, it allows you to control and pipe your CD
audio sound into the Falcon for DSP effects using software like the
Audio Fun Machine that comes with your Falcon 030.

Audio CD Master 3.0 costs $29.99 US, postpaid, worldwide.

Audio CD player 2.0 :
Older shareware version of Audio CD Master 3.0 from Nima Montaser, P.O.
Box 52127, Ottawa, Ont. K1N 5S0, Canada

Does not work on my falcon.

Egon CD-Utilities :
This driver contains a program and a CPX for CD-Audio Play and allow the
copy of the audio tracks to the hard drive.

55 - How do I program the CD-ROM drive ?

Some bindings exists to access the cd-rom drive. They can be found on
ftp.muenster.de (under \pub\atari\Programming\CDBIND01.ZIP).
They can be only used with some drivers (CD-TOOLS can be used, CDROM.XFS
not).

5 - Appendix A

These are some users configurations :

TT, MultiTOS 1.04, CDROM.XFS
TT, MultiTOS 1.08/9, CDROM.XFS v.0.7
TT, MetaDOS

These do not work:

TT, MultiTOS 1.08/9, CDROM.XFS < 0.7
TT, MultiTOS, MetaDOS

Drive : NEC Multispin, external (84-1).

Discs : GEMini Atari CD ROM from Walnut Creek
Clipart Warehouse

MSTE -> ICD MicroSCSI -> ICD AdSCSI+ -> NEC CDR-37
but the first host adapter in the chain has nothing to do with driving the
CD-ROM, its for a hard disk. The AdSCSI+ also has a hard disk running from
it as well as the CD-ROM

Drive : NEC CDR-37

Software :

ICDCDZ2.XFS as supplied on the ICD Pro utilities disk. This only seems to
work under MiNT <= 1.04. None of the other freely available CD-ROM drivers
(MetaDOS etc.) seem to work. I haven't tried Extendos or CD-Tools.

For audio playing, I�m using Nima Montasser�s �Audio CD Master 3v0�. This is the commercial release of the AUD_CD20.ACC audio CD player. Both work fairly well for me, but I haven�t got all the features to work yet.

In order to CD Player configuration to work (the default NEC CDR-37 one didn�t work! with AUD_CD20.ACC) I contacted NEC(UK). They very kindly sent me a copy of their �SCSI 1 Spec� free of charge. This is a 90 page photocopied document which lists all the SCSI 1 commands for a CD-ROM and what they do. I�m sure its pretty out of date now, especially as NEC must be onto SCSI 2 by now.
I used the SCSI.PRG from the ICD Pro disk to send SCSI commands to the CD-ROM to get the combination right.

```
----------------------------------------------------------------
Atari Falcon030, 4MB RAM, 127MB Internal IDE drive, 270MB external
SCSI drive, Viper 105S Tape Streamer.

Drive : NEC 2xi
```

Non-working drivers: MetaDOS 2.3 (no BOS drivers for Falcon).
ICD Pro Utilities (didn�t see the drive at all).
Atari CDROM driver, v0.6 (gave read errors).

```
Working drivers : ExtenDOS v1.11 (commercial, available in the UK from
Systems Solutions, price about 30 pounds).

Discs : Gemini Atari CD-ROM.
Cover disk from a PC CD-ROM magazine. The files read OK, but obviously
the PC-specific executables do not run. I got loads of TIF pictures etc
off of this disk.
The NEC 2xi is about the same price as an Apple CD300 (160 pounds + VAT).
But people seem to have had less hassle getting the Apple drive running.
I chose the NEC because is an internal drive, so slotted into my
mini-tower comfortably.

----------------------------------------------------------------
TT030 4 Mb ST Ram, 4 Mb TT Ram, 210 Mb HD
Mint (1.04) + MultiTOS

Drive: NEC 210 (also known as NEC55j?)
(double speed SCSI internal drive)

Driver: CD-Tools 1.08 from Hard&Soft Computerzubehor GmbH
```

DOS discs tried: - The Best of Demo (Comptec Multimedia)
contains lots of GIF/BMP/MOD/TXT files
- Monster Media issue 2 1993 (by Monster Media?)
contains also lot�s of GIF/BMP/MOD/TXT files
- TOP 101 shareware programs (came along with the drive)
hardly usable, only DOS stuff.
- Music Box 1994 (Powersource inc)
tons of MOD and VOC (about same as WAV) sound files.
Atari discs tried:
- DTP Grafiken (by Werbedesign Schutz)

contains tons of clipart files in IMG and (DOS) PCX
format, disc was made for Atari and DOS

Other drivers I�ve tried are several earlier releases of Metados from
Atari, a modified Metados for the Falcon and some XFS drivers for
Mint/MultiTOS (ICD and Atari).

Most of them work OK but for some discs (for example the DTP Grafiken disc)
the older drivers cannot cope with the large amount of files in a
subdirectory (with DTP Grafiken there are folders with over 700 files!)
Clicking on the folder icon just doesn�t open the folder�
The driver from Hard&Soft seems to work for all of my current CD-ROM discs.

The XFS driver for Mint/MultiTOS is slow� The Metados drivers seem to
buffer much more data, problem with Metados is that it�s supposed NOT to
work with Mint/MultiTOS. However, I haven�t got any problems yet.

TT030, MetaDos, Apple CD300
But it seems that the TT does not recognize a media change, and I get
some �not-responding� messages. After clicking <CANCEL> the loading is
performed perfectly.

```
>I chose the NEC because is an internal drive, so slotted into my
>mini-tower comfortably.
```

It is very easy to remove the Apple CD300 from it�s casing. It just holds
an Sony CDROM player which can then be mounted in a tower without any
problems.
(I�ve done so) The casing can then be used to hold a old HardDisk which was
left
over from a upgrade to be able to transfer data between friends (Works
perfectly!)

```
PS. I bought my Apple CD300 here in the NL for about Fl.470,- which is ca.
$250
-----------------------------------------------------------------
TT, MagiX 2.00, MetaDOS 2.30
-----------------------------------------------------------------

Thanks to all the users that mailed me their experience.
```

Please be careful with your attributions, as I did not write the above.
But back to the topic, does anybody know anything further about the above
mentioned emulator? I have my doubts that it really is a full ST emulator,
maybe it is just MacMINT or something.

103. How to change the screen font.

Newsgroup: comp.sys.atari.st
Date: 1994-10-03 20:42:14 UTC
From: students@cicg-communication.grenet.fr
Message-ID: <36pqb6INNlms@cicg-communication.grenet.fr>
Source record: 179878

I'm using the german vdifont program to tell the VDI to use some different fonts from the usual ATARI system fonts. It works as long as I don't change the screen resolution. When I do so, the old ATARI characters appear again. Does anyone know if there's a trick to keep the font that was chosen ? or is there any other utility program that does it properly ?

Thanks in advance.

Jean-Marc.

104. Mag!X release for Falcon.

Newsgroup: comp.sys.atari.st

I've heard that a release of the alternative OS Mag!X for Falcon was to come
up pretty soon (before the end of October).
Does anyone know any more about it ? Where to get it ? ...

Thanks.

JM

There is a program called ikbdptch (or something like that) on atari.archive
that supposedly fixes some games for use with STE machines. It has something
to do with the keyboard processor. Hopefully the author (Lars) can describe
it further. Look in /Utilities/Tosfixes, or perhaps /Ste. Good luck.

From: dackerma@magnus.acs.ohio-state.edu
Message-ID: <36pvno$bjs@charm.magnus.acs.ohio-state.edu>
Source record: 179880

The problem with Elite II is not so much that it always wants to save to floppy. It's that when you go to save the first place it looks is drive a: and if you don't have a floppy in there the game hangs permenently (at least on the falcon).

> modem, over network, or whatever...

There was a Multi User Dungeon (MUD) at one of the English universities
(Exeter or Essex spring to mind) that might qualify. I don't know if it
was around as far back as 1983.

OTOH I'm sure somebody somewhere had a game which would meet your criteria.
I supose it depends how you define 'video game'.

:-)

Roland.

Ouch!
I had a similar problem a while ago, (undeletable files). I think I
finally fixed it by using a disk editor. Try Knife ST, or something
similar. If all else fails, back up the partition and zero it.

109. Re: -SC1224 monitor making high pitch noise...is it broke?

Newsgroup: comp.sys.atari.st
Date: 1994-10-04 00:18:00 UTC
From: lunman@ChamplainCollege.QC.CA
Message-ID: <36q6vo$5au@samuel.ChamplainCollege.QC.CA>
Source record: 179881

For as long as I've been using Atari ST's (a LONG time), they have ALWAYS made some strange high pitched sound, especially when running in Med, or Low rez. There seems to be some kind of interference whenever GEM does something such as opening a window, or moving the mouse. Rubber-banding from the desktop always made a cute sound.

Perhaps Atari has fixed this problem with in their more recent machines, but it's always been a problem with ST's, ANY ST's, connected to ANY monitor, or even a TV. :-)

From: dackerma@magnus.acs.ohio-state.edu
Message-ID: <36q7of$c4b@charm.magnus.acs.ohio-state.edu>
Source record: 179888

I have put a file called 'medneteng.zip' up in the Network/Midi directory of a.a.u.e. It is an unauthorized translation of the description file and the .RSC into english. You will still need the original med_net.lzh to use the program. All that is in the medneteng.zip file is an english .RSC and the description of how Medium Net works, how to install it and problems. This should be enough to use the file. I did not translation the tech document describing the routines used by Medium Net.

So if my english isn't good enough for you ;) please ask me. Do not bother the original author of Medium Net. They are in no way responsible for either my bad english, bad german and/or bad typing.

Enjoy.

Is it just me, or is the Mac the only system that handles removable
media (like Bournelli, Syquest, Floptical, etc) reasonably well? I
guess the Atari does, too, but I keep hearing all kinds of stories from
PC-land about systems that crash hard when booting without a CD-ROM in
the CD drive, about ones that dies horribly when changing Syquests, etc.

I think this is just another case of the hardware being ahead of the
operating systems, but the operating systems don't seem to be getting
any better in this regard... They're inconvenient under OS/2 (it's
treated as a huge floppy, so you can't put the good HPFS filesystem on
it, only evil DOS FAT), a hassle under most UNIX (they seem to require
the super-user, root, to mount and unmount the removable), etc.

That's not _too_ bad; I only get 5-6 (or 9-16) frames/second on a
'486dx2/66 with 16M of RAM under OS/2.

Incidentally, I get really crappy disk throughput from the Adaptec 1542
(ISA SCSI card?!? In a high-end local-bus '486?!? ARGH!) and the Connor
.5G disk... iostone says something like 160k/s.

>Hey, I just bought a Canon BJ-200e inkjet printer for my girlfriend, and
>also played with it on my ST. Very cool! ...

I agree with your raves on the Canon BJ. I got a 200 about 1 1/2 years
ago for my ST (they had a $50 rebate so it was down to about $300). Worked
great with the ST. When I got my PC last November, it worked fine both in
PC mode and with Gemulator (and Pagestream! :). MUCH nicer than listening
to my Panasonic 1080i (the noise was really starting to get on my nerves :).

>In general, I'm impressed. Inkjets used to suck (back when the ink was
>water-soluble), but this unit really impresses me. Printout speeds using

>Windows driver on a PC. Basically, about a minute or two per page, depending
>on the density of the graphics. Text-only pages printed in about 30-45
>seconds. Also, it is very small (it sort of "stands up") and easy for me
>to swap between our PC and ST systems. It only takes up about 10"x6" on
>the desk when not in use (you pull out the output guide when you use it,
>push it back in when you don't).

One question -- maybe its not quite "water-soluble", but doesn't the ink
from your Canon BJ smear if exposed to water? Mine does, and its one of
the very few gripes I have with an otherwise fine product. Mine uses the
BJ-02 ink cartridge, I assume the same as the 200e? BTW, have you (or any-
one else) tried ink refills? Any specific recommendations?

>Jeez, did I really pay $600 for an Epson MX-80 all those years ago? :-)

Hey, I still fondly remember the 1020 4-pen plotter for my 8-bit. :)

Source record: 179898
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

(the HSMODA-package)

MODEM1 you can run at rates higher than 19200Bd only with additional hardware, eg (my) RSVE.

MODEM2 and SERIAL2 you can run without additional hardware at higher rates, and normally MODEM2 / SERIAL2 are at high rates more reliable than MODEM1. But there is a exception: The bug in some MegaSTE which corrupts files transfered over MODEM2/SERIAL2. This bug can be fixed by replacing a PAL with a new GAL.

MODEM2 and SERIAL2 on the MegaSTE have no ring indicator (only on TT and Falcon there is a RI on MODEM2). Some programs detect a ring by the string "RING" send by the modem to the computer, but if the program does not support this, bad!

I do not know how (and where) the RATsoft BBS asks for a ring indicator line? The next version of HSMODA (it will be released in some weeks I think) may solve this problem, depending on whether method the BBS uses for asking the RI.

Greetings, HS

122. ST -> Linux terminal

Source record: 179899

Hi,

I am trying to use my (very old) Atari 512+ with 1MB, hooked up to a color monitor, as a terminal to my Linux box.

I have found a version of C Kermit that works nicely, and I can connect to my PC.

The problem is that Kermit does not seem to recognize a lot of keys, like the Alt key, arrow keys, etc. When I say to Kermit `show key' and push such a key, it says that it is identified as \0. Leaving me (and Emacs) amazed.

All I would like to have is a good vt100 emulator with all my keys enabled. Is such a beast around? Where? (Somebody mentioned aaue, but that's not enough for me to find it...)

Thanks,

Hi Steve,

ST>(preferably formatted [is the erase option in Gemar the same as
ST>format?])
there is no way to 'format' a QIC 150 tape.
These tapes do not have any format, until they are written. While writing
the tape from the beginning, all other data will be erased by an 'erase
bar'. The same procedure is used without writing data to the tape, on
using the SCSI-Command 'ERASE', which is used by GEMAR's 'Erase'

Bye, Steffen

124. PowerDOS configuration problem

Newsgroup: comp.sys.atari.st

From: gio@wcl-rs.bham.ac.uk
Message-ID: <36r5is$r6k@sun4.bham.ac.uk>
Source record: 179900

I read about this shareware GEMDOS replacement in ST Review. They seemed to like it, so downloaded a version from a.a.u.e. (version 1.02) to have a look.

The thing is, there's no default configuration file, so it runs with a default setup, but when I used the setup editor, it creates a zero length file instead of the expected ASCII file, so I can't alter the default, plus there's no docs explaining indication where this config file should be stored even if I could create it...

What I'd like to know is:

a) is there a later version I could try instead? (1.02 is dated 1992)

b) failing that, has anyone got it running that could mail me their config for me to examine?

Thanks in advance...

Be seeing you,

Sounds like 2B (the NVDI and MagiC authors) could do with some more
staff!

Does anyone know what will be in MagiC 3 (apart from Falcon
compatibility), will the AES be improved to be more Atari-compatible?

134. Falcon's bright future

Newsgroup: comp.sys.atari.st
Date: 1994-10-04 11:23:47 UTC
From: cm3hirjd@soc.staffs.ac.uk
Message-ID: <36re03$3bv@bs33n.staffs.ac.uk>
Source record: 179810

In my local newsagents I was flicking through a copy of ST Format (well you don't expect me to buy it do you?) and I noticed an advertisement from Silica Shops selling 1 meg Falcon's with no HD for 399 UK pounds a piece. This is a substantial price drop and now puts the Falcon base machine in the reach of a much larger proportion of the ST owning community who'd like to upgarde.

Now for the bad news. 1 meg Falcon's are like birds with no wings, they just don't function the way they should. You are severly limited in everything you do, 1 meg on an ST may be fine for most applications, but on a Falcon it just doesn't do the machine justice. Want to view some of those amazing True Colour graphics? Forget it. Heck even in 256 colour mode the 1 meg machines are pushing it a bit. The majority of Falcon Pd and Shareware will not operate on 1 meg machines, lots of the utils will but 99% of the demos will die, most the games will have problems and the other misc software will be a really hit and miss affair.

The solution? Spend 599 on the 4 meg machine. Or hope and pray the Atari giants like Gasteiner and Compo start to kick out 4 meg upgrades at nice cheap prices.

The other problem is the lack of hard drive. At least you have a high density disk drive which can be pushed for format about 1.7meg with ease and little data loss, but still, just try running MultiTOS or Speedo with no hard drive... heck, I'm not sure if it's actually possible. Even if it was life would be hell. 2.5" IDE's are not _that_ cheap to buy, but you can at least kit yourself out with a basic hard drive for a few hundred pounds which is a good thing.

Next there is the monitor to consider. For serious applications use you really need a S/VGA or better (ie the superb MultiSync sets) for that enhanced resolution and clarity. Software/Hardware combinations like Screen Blaster or Blow Up will push this even further. But to use a TV set on the Falcon is _not_ a good idea, apart from the screen glare anyway, you will find most apps are best run in Interlace mode and this can kill your eyes. Having said that RGB monitors/TV's are good for fast graphics work (due to the screen update) and for most demos/games.

My point? Well if anyone is thinking of treating themselves to a Falcon at the new price this Christmas then please consider the above carefully. Sure you get the beast for under 400 quid, but you really need it upgraded to 4 meg. Then a decent monitor (which you will hopefully already have, or could perhaps steal from work or something!) and then the hard drive. It does indeed all add up making a bargain buy something a little more nasty. But... you'll end up with a damn fine machine at the end of it!!!

Happy hunting,

Richard Davey

Hi,

I have created my own Atari Page on the Web and would as part of this service to the Atari community like to invite you all to send your ideas for things to include. I would also appreciate any problems you would like solving (not personal) as I will do my best to find the answers for you. Have you any Atari related announcements to make? Then this could be the place to put them, although less than two weeks old this page has already been accessed by over 600 people and this is bound to increase soon with a mention in Future publishings new magazine ".net:The Internet Magazine" and I believe the next issue of ST Format.

Have you written any articles yourself that you would like to submit, or would you be available to answer peoples questions? Let me know if you think you can help me in providing this service to the Atari public. This is not a commercial enterprise but is done in my freetime and there will be no money involved.

If you have written any softwares reviews for submission, have an area of expertise or just want the new piece of software you've written to reach the public quickly then let me know. I promise to try and answer all letters and to evaluate all submissions for inclusion. Hope to hear from you all soon.

Thanks,

Mark msh@dl.ac.uk

I have a mega STE (as well as an older ST) and have inly recently tried running autobooting games on the STE. They don't seem to autoboot!!! The two I tried will run if I open the a-drive and double click the program in the 'auto' folder, but I cant get them to start by themselves. Am I missing something VERY simple in the MSTE manual? Any help appreciated,

141. Atari TV add last night.

Newsgroup: comp.sys.atari.st
Date: 1994-10-04 12:52:53 UTC
From: lannie@ins.infonet.net
Message-ID: <36rj75$6rd@insosf1.infonet.net>
Source record: 179817

Hey,
Has anyone seen the new Alien game advertisement on fox for the Jaguar? I was watching TV and it came out and bit me. The kid was playing the Alien game when the alien jumped up and stuck itself to the screen! The mother's hand touches the kid on the shoulder and scares the daylights out of him. He says..."Ahhhhh mom!!" Then he looks again and sees the mother's hand is dead looking and when he looks back, the Alien is holding the mother's arm and making it move!

The add then fades away, and says JAGUAR - Do the MATH.....

Pretty cool. It was nice to here the word Atari on TV again.

Later,

Lannie Schafroth
Lannie@ins.infonet.net

>Hard Drive...Color...Mono...and every thing i could think of to pinpoint
>a problem. It seems to me like the supercharger is on stand by as it should
>be, but for some reason the keyboard commands aren't making it there.

The supercharger should be the last item in the DMa chain, definately after
the hard disk. BTW, what sort of hard disk have you got? When I changed
to an ICD ADSCSI I had to tell the software to ignore DMA channel 6, the
supercharger channel, otherwise it tries to initialise SC as a hard disk..

>Also...I've noticed that several games I have that ran flawlessly on
>the ST refuse to acknowledge the keyboard and joysticks on my STe. One
>example in particular is Dragon's lair. Is this normal? Maybe I need
>to have my STe serviced (even though it is less than half a year out
>of the new plastic wrapper)?

Dragons lair also works on my STE. It sounds like you may have a problem
with the KB. I once had an ST where the IKBD chip was loose. I took the
top off the case, lifted the keyboard and then pushed the chip back in, and
it fixed the problem. However, if your machine is still under warranty I'd
get it looked at.

Do you have problems typing text into word processors on the ST as well?

>Thanks,
>Brian

No worries,

Simon

144. Re: Help with Frontier (Elite II) Needed. (Again) (Need To Save Game!)

>Hi All.
>Does Anyone Know if it's even possible to Save one's game in
>Frontier? (Falcon version)
>If it's possible please tell me how!

I am only using Frontier on an STE, but when I tried to run it from hard disk the saved games would show up after they were saved, but if you exited to the desktop they weren't there any more, and if you re-loaded frontier they had vanished.

I run frontier from a floppy in drive A: and save games to drive B:. I NEVER change the disk in drive B:, because the program does NOT detect a changed disk (I lost about two week's worth of playing time like this!)

Hope this helps,

Simon

>everything you do.

>Richard Davey
>Falcon Owners Group (UK)

I totally agree.
(that makes a change in these newsgroups doesn't it :))

If you are going to get a Falcon, you absolutely *MUST* get
4megs of memory
a hard drive (even a small one will do)
SVGA monitor at least although a multisync is the best
either blowup or screenblaster (I have only used blowup)

Without these the machine is a waste as it can't do any of the things it
is best at.
eg you can display 640x400x16 on a TV, but you can't read it....
on a multisync you can get at least 800x600x16 easily readable. probably
closer to 1024x768.

If you can't possibly afford the above then by all means get a 1meg
Falcon. But you may be disappointed with what you can, or more
importantly can't, do.

BTW I bought a 4meg Falcon with 65meg hard drive about a year ago. Up until a
week ago I was using a Philips low res colour monitor. Now I have a
Multisync+Blowup I would never go back.
I have also filled the 65 megs (mostly with demos) so I am in the process
of putting together a external 330meg SCSI drive. (second hand from
various different places).
When I get this up and running I will be a happy and satisfied person.
(At least for now... :))

Just my opinion,
Phil

147. ScreenBlaster2 v BlowUP

Newsgroup: comp.sys.atari.st
Date: 1994-10-04 14:11:00 UTC
From: avsec@westminster.ac.uk
Message-ID: <Cx5JEC.7us@westminster.ac.uk>
Source record: 179824

I know that BlowUP was meant to be the best - However,
Compo are offering Screen Blaster with NVDI for 80 quid - cheaper
than buying BlowUP Hard 2 and then NVDI after.

Are there any hardware differences between B'Up and Screen
or is it all software differences.

Whats that S'Blaster 2 software like and is it worth paying less ?

Cheers,
Phil.

I do know that there's an access for certain types of Compton's CD-ROM encyclopedias out there (I've seen it out on GEnie). Also there IS a new CD-ROM access program being developed by Peter Zalesak of ABC Software that will allow for the text and graphics on most CD-ROM formats to be read from an Atari desktop (don't expect to see one for the Microsoft stuff, though) - he demonstrated it at last month's TAF meeting and it looks like it's going to be a pretty cool program, he's hoping to have it released as shareware in the next couple of months.

>childish) email flame from James Baumgardner <jbaumgar@bronze.coil.com>
>which suggested I get a 'real term program' or 'feign computer literacy'
>and not to 'whine' about my 'inadequacies.'

Hi there. Since you are obviously not civilized enough to restrict
E-mail conversations to E-mail, I have no qualms about raking you over
the coals in public. I must apologize to the denizens of the net who are
reading this, but Hutch (that's right, Hutch <hutch@ilmen.lanl.gov>)
decided that he prefers whining in a public forum rather than dealing with
criticism in a constructive manner.

Hutch, I merely suggested that you should not expect a flow of 100+
messages a day from thousands of people world-wide to conform to
standards that suit your purpose. Certainly, you provide a great service
to G*nie and the customers therein. But isn't it bad enough that G*nie
charges for free information without you asking for that information to
be pre-processed at OUR expense?

I suggest that if you want to continue providing this service for G*nie
customers, you should be inconvenienced. A `real term program' or `one
than can handle >80 columns/line and/or LFs rather than CR/LFs,' to quote
my own message, would easily fix your problem. When you replied and
stated that you had a SUN w/ a 21" monitor, I seriously could find no
reason for your concern. Even a modest programmer such as myself could
write a little GFA program in five or six minutes that could word-wrap to
80 columns and convert LFs to CR/LFs. With all of the resources
available to you that you had mentioned, there is NO POSSIBLE WAY that
unformatted postings could be a problem to you.

I can't fix your problems. Occasionally, though, I'm inclined to help.
However, when I see someone who whines, cannot back up his whines with a
logical argument, is too lazy to perform even the most rudimentary of
text manipulation, and when questioned is forced to twist the facts and
whine in public, I find myself devoid of pity.

At this point, I must turn the soapbox off. I suggest you do the same,
and in future, I certainly hope that you are mature enough to keep E-mail

discussions where they belong.

Via anonymous ftp from atari.archive.umich.edu. You might want to try
the mirror site on src.doc.ac.uk (that is not the right address, but it's
close :-). Both are in /Printer.

> something VERY simple in the MSTE manual? Any help appreciated,

You are being bitten by TOS 2.0x, which fails to work with several rather common bootsector copy protection schemes. I was quite irritated by this myself. Some "cracked" versions of these games do work correctly on a MegaSTE. Major irony, there. Regular STEs running TOS 1.6x do not have this problem, though some games will not work on any STE machine for other reasons.

It is possible that some clever person might be able to write a "booter" program that could perhaps fix this problem with some games (perhaps by company), similar to the 16mHz booter programs. I have not seen one, though. Incidentally, do be sure to try the 16mHz booter program on some old games. I found games that sorta sucked at 8mHz, but are great at 16mHz! Look in /Ste/Mega on atari.archive. Also, /Tosfixes might give you some useful stuff.

Another related issue: some very common ST bootsector viruses also don't work with TOS 2.0x. Thus, if you have a floppy disk that really shouldn't have any self-booting stuff on it, but it gives bombs when you boot, check the disk with a virus checker (I recommend Vkiller on atari.archive.umich.edu). I found a new outbreak of the Signum virus on some of my disks this way :-).

That is right, but only few know that there is a very cheap and simple possibility to do so. You only need a CD4040 chip, cut one pin of the MFP and make some cables between them. Then you have 110 to 19200 and alternatively 38400bps, choosable with a simple switch.

regards,
Volker

It depends which version of NVDI. I bought 2.5 a couple of weeks ago for
25 pounds. Add another 65ish for Blowup and there isn't _much_ difference.

>Are there any hardware differences between B'Up and Screen
>or is it all software differences.
>Whats that S'Blaster 2 software like and is it worth paying less ?

I have not seen screenblaster at all but I am very impressed with Blowup.
It could do with one or two slight improvements though :)
(nothing major, just things to make it easier to use)

>

Hold down ALTernate and press any key with the disk in the drive
when booting (ALT stops the harddisk from booting, any key skips
the memory test and harddisk wait). Some games still won't work,
and this is because some things are different on the MEGA STE
(one problem I've got is that TOS 2.06 uses a timer (in a chip)
that was unused before - and some games use this too :-)
This problem can be solved with a patch program (send e-mail)

-=> Quoting Frank Allheshack.demon.co. to All <=-

> If you have any info on HSMODA04, I'd be grateful for some help.

F@> I can email you a UUencoded copy of mine if you want to try it?

Hi Frank,

I already have HSMODA04, it's just that I can't understand the docs !

Incidentally, someone else e-mailed me to say that my version of TOS, i.e. 1.2 (1.02) is the *only* version that has RTS/CTS working properly, and therefore it needs no fix. Is this right ?

Also, I tried running DTERM at 19,200 port speed, and whilst the screen gets garbled and loses characters, it seems to be fine for z-modem downloads. I had a small glitch with an upload, which was fine when I went back to 9600.

Anyway, the only reason I'm using D-Term is because it is quick to load from floppy. NOW, I've just bought a 120Mb HD, [haven't got the host adapter yet], I will (tempting fate a bit here Kev !) be able to run mega super comms progs with all the trimmings, and have them load in the blink of an eye !

Cheers.

Kev.

Source record: 179841

Hi Everyone,

I've just got a HD for my STFM, and would now like to upgrade the memory.
Why, I'm not too sure ! It just seems like a good idea ! I don't have any out of mem messages or anything. That's a point, can anyone give me a good reason to upgrade my 1Mb machine ? What benefits would I get from say, 2.5Mb ?

Anyway, what I want is to do a D.I.Y. upgrade, to keep the cost down.
I know I can do one with SIPPS (8 or 9 chip 1Mb only), BUT, can I do it with any other chips ? Because I'm having trouble finding used SIPPS.

Can I use SIMMS ? Are SIMMS and SIPPS fundamentally different devices, or do they just have different connectors ? (because Gasteiner do a SIMM-SIPP adaptor for $5)

Must I use ONLY SIMMS/SIPPS with 8 or 9 chips on them, or could I use the three chip ones (which are plentiful on the used market), and must they be only 1Mb ones ?

Thanks in advance.

Cheers.
Kev.

From the Holy Book of <36rupc$1ah@bronze.coil.com>
as spake by jbaumgar@bronze.coil.com (James E. Baumgardner II) :

>In article <9410031452.AA07562@ilmen.lanl.gov>,
>Hutch <hutch@ilmen.lanl.gov> wrote:

>>In article AA07248@ilmen.lanl.gov, hutch@ilmen.lanl.gov (Hutch) writes:

>>>PLEASE... when you post a message to ANY newsgroup on the Usenet, keep
>>>your messages to a width of 80 columns or less and use a hard carriage
>>>return at the end of each line. [...]

This bears repeating. This is not just for GEnie, folks, and not just
for this group. This is everywhere.

>>In regards to my earlier post, above, I got a really nasty (and very
>>childish) email flame from James Baumgardner <jbaumgar@bronze.coil.com>
>>which suggested I get a 'real term program' or 'feign computer literacy'
>>and not to 'whine' about my 'inadequacies.'

>Hi there. Since you are obviously not civilized enough to restrict
>E-mail conversations to E-mail, I have no qualms about raking you over
>the coals in public.

And since you are obviously not civilized enough to respect basic net
etiquette, I have no qualms about doing likewise.

> I must apologize to the denizens of the net who are
>reading this, but Hutch (that's right, Hutch <hutch@ilmen.lanl.gov>)
>decided that he prefers whining in a public forum rather than dealing with
>criticism in a constructive manner.

No, sir. Hutch did not force you to post your continued rants here; you
chose to do so. Apologize for your own actions.

[That said, I must also apologize for continuing this here, but I felt
it important to attempt to offset some of the damage done by Jim's
implication that it's okay to violate basic Usenet rules.]

>Hutch, I merely suggested that you should not expect a flow of 100+
>messages a day from thousands of people world-wide to conform to
>standards that suit your purpose.

Sigh. From the news.announce.newusers article "Rules for posting to
Usenet":

|In preparing an article, be aware that other people's machines are
|not the same as yours. The following is a list of things to keep

|in mind:
| * Keep your lines under 80 characters, and under 72 if possible (so that
| the lines won't get longer than 80 when people include them when
| responding to your postings). Most editors have a fill or format mode
| that will do this for you automatically. Make sure that it
| actually puts ("hard") newline characters into the file, rather
| than just wrapping the displayed lines on your screen.

This is not something that Hutch plucked out of his ear to satisfy his
own petty whims. This is _basic_ net etiquette. This is part of the
stuff people are supposed to know _before_ they start posting. This is
to accommodate systems over which neither you nor I nor Hutch have
any control. And it's not even that hard. Hell, my editor does it
for me. If yours doesn't, might I humbly suggest that you obtain a
`real editor'? ;)

> Certainly, you provide a great service
>to G*nie and the customers therein. But isn't it bad enough that G*nie
>charges for free information without you asking for that information to
>be pre-processed at OUR expense?

In the first place, it's not Hutch alone that is asking you to do so; in
the second place, it's something you're supposed to be doing already;
and in the third place, if it's so horribly "expens[iv]e" for you to
format your own article, how much more so is it for Hutch to format
hundreds of articles per day?

>I suggest that if you want to continue providing this service for G*nie
>customers, you should be inconvenienced.

The phrase "No good deed goes unpunished" springs to mind for no obvious
reason.

> [...] With all of the resources
>available to you that you had mentioned, there is NO POSSIBLE WAY that
>unformatted postings could be a problem to you.

By the same argument, there is no possible way that formatting your
articles before you submit them could be a problem to you.

>I can't fix your problems.

Sure you can. Follow net etiquette. Encourage others to do the same.
And above all, don't blindly accuse someone who does so of being a
whiner.

>However, when I see someone who whines, cannot back up his whines with a
>logical argument, is too lazy to perform even the most rudimentary of
>text manipulation, and when questioned is forced to twist the facts and
>whine in public, I find myself devoid of pity.

Amazing. You vehemently insist that the user not be "inconvenienced"
by having to format hir own single article, and yet Hutch, who would
have to deal with hundreds of such messages per day, is "too lazy to

perform even the most rudimentary of text manipulation". Talk about "twist[ing] the facts and whin[ing] in public". Physician, rake thyself through the coals.

>something VERY simple in the MSTE manual? Any help appreciated,

What drive are you booting from? The AUTO programs have to be on the boot drive (so if you're booting from drive C, the AUTO folder has to be on that drive too). Also, make sure that these programs actually do belong in the AUTO folder; most regular programs do nothing when put in the AUTO folder, and most AUTO programs do nothing when run from the desktop.

If you are trying to run normal programs at boot time (like a word processor or something), you have to select the program, then choose "Install Application" from the Desktop Options menu, and select AUTO from the dialog that pops up, then click on "Install." If your Desktop doesn't have the "Auto" option (i.e. TOS < 2.x), you need a program like HEADSTART.

Jim,

You might not like this, but some of us can't help that the terminals don't handle more than 80 columns very well. I, for instance, have access to the net via my school's VAX system, and I have no control over how the newsreader formats messages. It is annoying (though livable) to read messages that have words broken in the middle (at the edge of the scr een). Worse, if I try to reply to such a letter, the VAX editors ref use to properly format messages with more than 80 columns, so I am le ft with a couple of lines (each one a complete paragragh) that I must manually format before replying.

In the end, it is easier to not reply to such posts, regardless of how much the person could have benefitted from my input, or I from their's.

I too request that, wherever possible, posters restrict the line length to 80 columns.

Thank you,
Tom

: >monitors please ?

: >- Rahin
: > (rahin@scs.leeds.ac.uk)

: Funny to answer my own post.

: I connected the 8514 to a PC with VGA output and the monitor and the VGA
: output connectors are compatible and what's more the monitor displayed
: everything ok. The PC I tried can only output VGA, so 8514 can reliably be
: used as a VGA monitor. I'll try again with a PC with SVGA output and see
: what happens.

: - Rahin

The pin out of an IBM 8514 monitor is the same as a standard VGA monitor.
The 8514/a video card uses the id bits to determine which monitor is
attached (ie. 8514) and sets up the signals appropriately. This monitor is
capable of 1024x768, BUT it is interlaced at 43Hz (I think, of the top of
my head). As I don't have any spec's on the Falcon, I don't know what it
wants, but the 8514 will sync horiz. at about 31Khz and 36Khz, it is a
fixed frequncy monitor and is not a multisync.

There is a much easier way - get ahold of DC Software's DC-Format. I think it's at version 3.0 or something. It will write an IBM bootsector to your disk, thereby making it readable by a PC. The two disk formats are identical except for some bootsector differences. Once you do this to a disk, it will be readable by both computer types. Any decent virus detector will recognize an IBM disk and will not set off an alarm.

180. HELP! Where do I get these programs?

>SILKBOOT (eliminates 90 sec. delay for HD)

I mentioned these, I'm afraid, without realizing that they aren't generally
available on the net. I will d-l them from GEnie and upload them to Hensa
within the week.

>GEMSOUND (assign different sounds for different tasks etc.)

There is a program like this on GEnie called CLICK. I will upload this to
Hensa, also, unless somebody can tell me it's there already.

BTW, Hallvard, how about I email you my shareware catalog (I'll be
uploading it to Hensa soon)?

186. TeddyTerm 2.1

Newsgroup: comp.sys.atari.st
Date: 1994-10-05 02:02:03 UTC
From: sheppard_r@ix.wcc.govt.nz
Message-ID: <36t1er$e2n@golem.wcc.govt.nz>
Source record: 179714
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Well as a few people here raved about TeddyTerm 2.1, and being
a avid Flash 1.6 user i thought I would give it a look...

Well has far better support for Zmodem and let you have Auto Zmode...

Had a bit more glitter than Flash 1.6, but as they say all that glitters
is not gold...

Has a lot of features that Flash 1.6 does not have, but I could not find
any use for all these features, they were no usefull..

One BIG BIG minus is that it does not support a capture buffer, its a external
thing, and no Editor, how a Flash 1.6 user here could rate this program
as better than Flash 1.6, I would like to know, the capture feature and editor
are one of Flashes 1.6 big points, I have read that its the envy of PC Clone
users....

I am still trying to find a Replacement to FLASH 1.6 that is as fast, uses
standard fonts, I think I have tried them all, THE STORM was my hope but is
still very buggy....

Here is a list of Terminal Programs that I have tried..

MasterLink,Interlink,St-Talk Pro,Connect,Rufus,FDT,Teddyterm,Taz,Trapido,
Flash 2.2,STalker3/STeno,ANSITerm and Uniterm, plus a few otheres that I
can't think of now and a few demo ones...

Trapido looked a possibility but its no longer supported, some are far to slow
and only work best on a TT/Falcon, but those machines are far to dear here,
at least 3 times a good 486 Pc Clone and NO SUPPORT AT ALL...

So when are we going to get a Good Terminal program that works on
a ST/STE/MEGA, that is at least as good or better than Flash 1.6...??

Hallavard,
Please accept my apology...
I was careless in uploading this list as I thought all data was intact
when I sent it. Not trying to evade responsibility here...I deserve the
pounding for being careless. I can only ask that you and other supporters
of this thread and the Atari community will understand the posting was made
out of eagerness to return the same services I enjoy on a daily basis through
Use Net. I honestly thought all information was intact in the posting...
including Author, and address for sending updates. My mistake...and I agree
that it was a big and tacky mistake. Please believe it was out of carelessness
and not bad character.

Sincerely,
Brian

Yes stick to well know standards, Ataries are not Unix machines, if you need a
real Unix machine go by a Sun or Acorn..

Those Archivers don't support Directories/Folders, so for real Atari users are
usless....

:
: >Richard Davey
: >Falcon Owners Group (UK)

All of this is true indeed..but I do have a question for those of you who
have Falcon knowledge...

Would this be a good deal for someone who already owns an STe? Is there
any reason the SIMMS can't be swaped out? When I purchased SIMMS for my
STe I went ahead and got the fastest 1X3 boards I could find in hopes they
could be salvaged should I ever change machines. Adding a Falcon to my
set up and swapping the memory between it and my STe would be a worth while
deal...if it would work of course (I.E. exchange my 4 1X3 SIMMS for the smaller
ones in the Falcon). The same question stands in terms of Hard Drives. Is
there any reason that would prevent me from using my currnet SCSI drive with
the falcon? A switch to bypass my AdSCSI+ host shouldn't be very hard to make,
and disableing the ICDBOOT.SYS file should pose no grave difficulty either.
Would this work? Also...since my main interest in a FAlcon lies in its ability
to record Digitaly direct to HD..wouldn't I be better off directing money
towards a VERY LARGE SCSI II based drive rather than the internal 40 or 80meg
IDE unit? As for the monitor...I'd eventualy have to buy one anyway should I
ever demand anything beyond the performance of my present SC1224 or SM124. At
least they will work on a Falcon...they're useless should I move to a PC or Mac
for HD recording.

I may be clueless...but I'm trying,
Brian

We are always looking for users to write reviews, articles about
computing in general, the computer industry, or just
some light humor and chit chat.

Since 1991 we have been a non-profitmaking magazine for Atari users,
one of our aims is to produce a magazine that is written by the people
it is aimed for - and do this as cheaply as possible.

You don't need to have a degree in writing, if you have a view on something
or you want to write a review on a peice of software etc.. then
you can write something for us!

For more info then send mail to s.ticehurst@bton.ac.uk with the subject
line "MMcontrib"

: >piece. This is a substantial price drop and now puts the Falcon base

OK News Update... Gasteiner are selling Falcons (1 meg, no HD) for 300 QUID.
And you can upgrade this to 4 meg for 150 pounds.

This makes the whole bundle a LOT better. You save a hundred quid, or
put it another way get a 4 meg for only 50 quid more than Silica charge
for their 1meg machines.

Hey people... BUY BUY BUY!!!

My Falcon certainly did not have SIMMs. It had an Atari memory board, which
had surface mount memory chips up to 4MB. (ie eight chips, 4MBx1bit).
According to the silk screen on the board, it's used for 1MB too (presumably
with 1MBx1bit chips). But upgrading yourself would be difficult.

I bought a FalconWING board, which adds SIMM capability; then put
on 4 4MBx8 SIMMs for 14MB total.

Does anyone know enough details about this to make it really interesting?
For example, how about rights to the Atari logos? So which of the
two Ataris make the Jaguar? I suppose that's Jack T's lot. Is there no
connection whatsoever between the two companies?

>No pre-emptive multitasking in Geneva, so there's no contest as far as
>I'm concerned.

I don't wish to be accused of some form of discrimination or racism or similar :-) but what I think is the case is that in the United States there has grown to be a giant bias towards Geneva, and the same has happened in Europe for the German stuff. An honest comparison is impossible. It is basically the same sort of thing that made WordPerfect popular. Not quality, but marketing and fate. The US ``like'' Gribnif, the UK ``like'' HiSoft, and the rest of the world likes the German products mainly (and that is because they're generally actually good).

I use neither of Geneva, Magix or MultiTOS except when feel like getting a firm headache porting my software to those systems. One very important reason is I don't want to lose my WINX compatibility, and most multitasking systems have some nasty effect on my graphics board/NVDI ET4000 setup. Geneva is the worst. It is incompatible with standard GEM in almost every aspect I can think of. (OK, this is a slight exaggeration...)

I find opaque window moving, colours and speed more important than real multitasking. For me it is sufficient to have my text editor run in parallel with the rest.

So my conclusion is: NeoDesk, MagiCdesk and Teradesk are all NOTHING compared to Gemini with a neat plain single-tasking TT Tos and WINX.

Atari and MultiTasking are a hype. When it comes to doing serious work most people reboot and run plain TOS anyway. So why not admit this and save loadsa bucks, quid or whatever you use to pay for your software?

Let's be realistic about this and add the price for a CPU board for
32MHz. Nobody buys a 16MHz system today. As far as I know, only
Atari still has the courage to do this today.

>Can any one confirm this....??

The 4M Falcon did not have simms - at least mine didn't - but it was one of the early ones. I don't know about the 1M Falcons but I would expect them to be along the same design as the 4M with a memory board with 1M worth of chips on it. My understanding is that you have to "waste" the 1M since there is not much you can do with it. This, I believe, has kept a lot of people from buying the 1M Falcon and choosing instead to go with the 4M off the bat (plus you get internal HD and software that way.)

BTW - I still have a 4Meg board for the Falcon if anybody needs one. Contact me and we can wheel and deal. Wayne Booth

>just like a STE....

>Can any one confirm this....??

The Falcon doesnt use normal SIMMs slots, rather a daughterboard that
sits in the machine. On this daughterboard is memory, and could differ
in implimentations.

The 4mb board that comes from atari is useless as is, since its got
memory chips soldered on, and is only useful for another falcon that
might have 0 memory.

Third party boards offer the capability to remove the atari daughterboard,
and replace it with a daughterboard that HAS SIMMs slots, and gives you
the ability to go to 14/16 megs. I got one such from Toad, for $65, and
populated with 4 4mb SIMMs I had laying about.

To move STe SIMMs into a Falcon would require such a board. If one
can purcahse a 0 memory Falcon, this would be a good idea. Youve
already got 4mb of memory from your STe, so that cost is transparent.
You would need one of these memory boards, but even unpopulated memory
boards go for under $100. The in the future, when you run into the
walls of 4mb, you can simply pull the 1mb SIMMs and replace them with
4mb SIMMs and go to the top with 14/16mb.

There are also apperently third party products which will take you
above 16mb, but the cost here grows.

Message-ID: <36ubuj$360@archive.ny.jpmorgan.com>
Source record: 179760
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Here's one for all you MiNT experts:

Having downloaded and compiled MiNT 1.10 (pl8) I find that MinixFS no longer starts up when I boot. I thought that the patches to 1.10 were supposed to make it work but this doesn't seem to be the case. I also tried applying the patches to take MiNT to 1.11 (pl2) but this didn't work either.

One thing that occurred to me was that in my gcc setup I have replaced the include files with the MiNT ones (pl44) and compile MiNT with the '-mint' flag. If I don't do this then MiNT doesn't compile at all.

Any help with this would be greatly appreciated...

My system: Falcon 4/127, TOS 4.02, Gcc 2.5.8, MinixFS 6.10

Thanks in advance,
Piers

Roger, Nope you are incorrect.. the Falcon uses a board that slots onto
two rows of pin connectors. You can buy a third party board that will
accept SIMMs tho. I personally have one of a very few official 14Mb
boards that atari produced :)

: So it would be easy to upgrade a 1 meg Falcon to a 4 meg one,
: just like a STE....

Nope :(

Not to ruffle any feathers, but it seems to me that the British mags have a tendency to downplay American software. I've noticed it especially with ST Format (since no one around here carries ST Review). I would suggest that the -2% difference should be 0% to +2%.

Mind you, I don't own NeoDesk, and I haven't seen Ease, but I've noticed these differences with other programs where I thought the ratings should have been at least equal. And just for the record, this isn't a "Buy American" commercial, either; just my honest opinion.

Well Roger, from what I have gathered you are not a FzDt fan, but
I cannot go along with the fact that Flash 1.6 is a better program.
It is soooooo slooooooowwwwww.

I like nice quick screen updates, and after having used Flash 1 & 2
and Stalker, and Connect etc. etc. etc. I really believe that
the registered version of FzDt. kills em all. It may not have VT100
but so what, I use ansi emulation and there is no problem at all.
When you add all the other little bells and whistles in the program
it is ALMOST the perfect program. Perhaps when stuff like mosaic
etc is developed (or am i dreaming) for Atari, then i might change
my mind. Unfortunately Fzdt's problems really are with the authors
total lack of support.

I recently bought a second hand hard drive for my 4meg STe. It is a Protar Progate 50DCII. It seems to be a good drive except fo one problem, I can't use STOS wih it. It won't laod any programs from it if STOS is loaded. Is this a known problem with the drive or the drver S/W (I have version 3.0)

Any help would be greatly appreciated

Thanks in advance of any assistance

Toby Coe

>
> Now for the bad news. 1 meg Falcon's are like birds with no wings,

Shame your text cancels out your subject! What you are basically saying is
that Silica will sell you half a machine at the cheap price or a whole machine
at the usual expensive price.

As you say, a Falcon needs at least 4MB, a 100MB hard disk as basic spec. Add
the cost of a monitor. Then buy the bits which Atari left off to make it a
usable modern machine, like Screenblaster, NVDI, Speedo, and multitasking OS.
Add non essential essentials like Neodesk, and you end up with a dent in your
wallet to the tune of 1200 pounds. That doesn't include things like a 32mhz
CPU upgrade, a tower case and decent keyboard, a multisync, etc.

The thing is still insanely overpriced for what is, lets face it, a hobbists
machine. I still use my ST and am frustrated by its lack of power, and cannot
justify investing money in it - it's obsolete. I wont consider a PC
until the PowerPC thing settles down and we have another crappy but fairly (?)
futureproof standard. The Falcon option is my favoured one, but until I can
get one for half the current price I'm not interested.

Message-ID: <10051994.201628@empyr.dircon.co.uk>
Source record: 179756

Hi All,

Thanks for all your advice about my HD. I've done a bit more research and would appreciate your opinions....

I have contacted several stores in the UK and have been given the following prices for SCSI host adaptors:

Gasteiner GE Soft - 60 UK Pounds / $93 US / 143 DM
Gasteiner Top Link - 70 UK Pounds / $108 US / 168 DM
ICD Link 2 - 90 UK Pounds / $139 US / 215 DM

What are the relative good and bad points of each ?

A friend recommended the AdSCSI + to me, but I have been told that these are no longer being produced.

These appear to be the only host adaptors available in the UK. Could I have opinions from you on which you think I should go for please. I don't really have a lot of cash to spend, so if anyone knows of a cheaper alternative, I'd be very glad to hear from you !

Thanks.

**** IMPORTANT ****
If you are outside southwestern British Columbia, Canada, please ignore this
message. (Some distant sites display messages even when the distribution is
set to BC-only.)
**** End of disclaimer ****

For those of you still reading:

B.C.'s original and best (*see below) computer event,
the PACIFIC COAST COMPUTER FAIR AND SWAP MEET
is back for its 15th year!

Time and date: Saturday, 15 Oct, 10am to 4pm
Location: McPherson Centre, 7325 MacPherson, Burnaby
(near Metrotown, south of Kingsway and east of Royal Oak)
Admission: Only $3.00 ($2.00 for children and seniors)
(Compare that to other computer shows!)

The swap meet portion of the Fair will consist of 40 to 50 vendors with a total
of 70 to 80 tables. Vendors will be selling new and used computer equipment,
ranging from the latest technology to "I remember when..." technology. On the
software side, there will be shareware, CD-ROMs, and assorted applications
and games for various makes of computers. With about ten days to go, it looks
like we have a shot at beating our previous record for the number of vendors.

Several local computer user groups will also be putting on displays. These
can be a great source of (mostly) unbiased information. (Of course, if no
salescritter has ever lied to you, you probably won't need this :-))
We also hope that the local SIGGRAPH chapter will be there with videos of
the latest in computer graphics.

The Fair is run by the Pacific Coast Computer Fair Association, a non-profit
society of volunteers drawn from the local personal computing community.
It is in no way associated with the commercially-run computer swap meets being
operated in British Columbia. In particular, we have no connection to
Computer Fest, the organizers of which chose to schedule their event on the
same weekend we've been using for years.

Remember, we only run a single Fair each year, so if you miss this one you'll
have to wait a whole twelve months!

If you are looking to sell some computer-related items, there MAY still be a
couple of vendor tables left. The rental charge is $50 per table. You can
reserve a vendor table by calling (604) 420-3286.

* You may not believe me, but this is what I have been told by a number of people I met outside somebody else's computer swap meet last month.

cs>?
cs>I will also be making this decision in the coming weeks, so I'd
cs>also appreciate some opinions on the two products.

I'm using Screenblaster (and when I 've upgraded my NVDI to 3.0, with
NVDI) on a falcon and it works fine.
I only have one strange thing: when I use NVDI (2.42) the systemfont
is smaller, but most programs don't recognise this and think it is
bigger. This is giving serious problems once in a while; even GEM
doen't recognises it!
I don't know wether NVDI 3.0 is solving this problem (or I'm doing
something wrong), but the speed in incresing a lot and that's
important to me :-)

About screenblaster: I only have German DOC's and I don't understand a
word of it (though I can understand Das Profibuch) Fortunately it's
working :=) _very_ good; I would recommend it to every Falcon user.

To use simms you need an additional board, because the Falcon has an own memory board. With the simm board you can use 256k, 1M or 4M simms. You must have four of a kind => 1M, 4M and 16M(14M) is possible.

I hope I got this correct...

Are you using a software-only version of the ScreenBlaster? I got
mine from a place in USA, Compo software or something, and got a
VERY small package of documentation. But I must say, its really
plug-and-play, and works wonderfully. I run my Falcon at
800*600 all the time now, and when I really need it, I can go
to 1024*768

Agreed, even if a VGA will do the job!

I use both. I have the software version of BlowUP and the demo version of SB. I
use SB for TV/RGB and BlowUP for high-rez interlaced on TV and for VGA.

PD>
PD> Without these the machine is a waste as it can't do any of the things
PD> it is best at.
PD> eg you can display 640x400x16 on a TV, but you can't read it....
PD> on a multisync you can get at least 800x600x16 easily readable.
PD> probably closer to 1024x768.

Hey, with BlowUP and a standard VGA you can get 912x608x256 easily. Using
BlowUP or screen-blaster you can use 800x576xTC on TV/RGB (interlace shit).

Then there is this cool but totally unusable program SWABS (Shit What A Big
Screen :)) which gives 1600x598x16 on TV, using interlace (such shit) and not
working with NVDI.

PD>
PD> If you can't possibly afford the above then by all means get a 1meg

247. Warp 9 and other Screen Accelerators...

Newsgroup: comp.sys.atari.st
Date: 1994-10-05 22:37:17 UTC
From: hopper_t@msupa.pa.msu.edu
Message-ID: <36v9qt$q27@msuinfo.cl.msu.edu>
Source record: 179782

Hello, fellow Atarians!

After the little discussion on-line about Warp 9, QuickST 3, and NVDI, I thought I'd ask one of the Codeheads about the issue of relative speeds, telling them Lars-Erik's assertion that QuickST3 was actually faster than Warp9. Since I imagine others around here would be interested in the response, here is John Eidsvoog's response (plus a couple more ;-).

I also asked about the "VDI Enquire" that shows up in tests done with GEM Bench, since this is one area that NVDI is much faster. The reply doesn't appear below, but VDI Enquire only happens when an application initializes the VDI (when you first run a GEM app), so speed-up there will be negligable in the over-all scheme of things.

I asked simply because I'm considering buying NVDI, and already use Warp9, so naturally I was curious about relative speeds. I present the responses here on the assumption that others will be similarly interested.

Regards,
Tom

Tom,

Warp 9 is _negligibly slower_ than Quick ST in some areas, not "much slower". Warp 9 is _much faster_ than Quick ST in programs that use raster copy for text scrolling because Quick ST did not handle raster copies. You won't see this in any benchmark tests, but it's _visually_ perceptible while scrolling in a Steno window -- doubters should do a stopwatch comparison.

In the areas that Quick ST handled, it was imperceptibly faster than Warp 9 because we had to add a few instructions here and there to fix bugs caused by Quick ST's shortcuts. But the only way to notice this is to run a benchmark test. This would show Warp 9 to be less than 1% slower (Quick Index users who would challenge this do not understand the difference between "percentage" and "percentage points", but I'd prefer not to leave another long message explaining this -- it's simply not important).

As for NVDI, it is slightly faster than Warp 9 in many unimportant areas. But Warp 9 is slightly faster at text displays and the most frequently used GEM routines. Unfortunately, NVDI comes with a benchmark program which is totally slanted. It contains numerous tests which measure lots of system calls which rarely occur in daily use of the Atari (such as circle drawing) and which Warp 9 does not waste memory to handle. This leads many people to believe that NVDI is "much faster" than Warp 9, because only a couple of the tests in its benchmark program measure routines which are frequently used (and Warp 9 beats NVDI in these tests).

One area where NVDI is faster than Warp 9 even at text and frequently used routines is in resolutions with more than 16 colors, like 256-color and "true color" modes on the Falcon. Warp 9 was never optimized for these resolutions because we find them to be unacceptably slow, even with optimization (such as that done by NVDI). You'll find few people (if any) who use these resolutions for much other than occasional picture viewing.

Doubters may take my comments with a grain of salt, but I don't care. If I were trying to mislead people, I certainly wouldn't have mentioned Warp 9's downfalls. Those who don't believe me are free to purchase NVDI and make their own assessments.

John

J.EIDSVOOG1 [CodeHead] at 18:35 PDT

gnox,

Thanks for reminding me. I forgot about the "regrab" technique used by the Warp 9 ACC. My previous message documented the behaviors of Quick ST and Warp 9 with nothing else installed. The more resident software you have, the more Quick ST will slow down because it doesn't regrab the vectors at the end of the bootup process.

Since very few people run with a screen accelerator as their only resident software, it's not even pertinent to mention that Quick ST is negligibly faster on an otherwise bare system.

And of course, Warp 9 has numerous other features not found in NVDI or Quick
ST.

John

M.MOTOGAWA [MEL] at 17:33 PDT

Rich,

I like putting Warp 9's auto folder prg as close to the beginning of the auto folder as possible so that the auto folder msgs flit by super fast. You system will boot slightly faster. Then try to have the Warp 9 Control Panel accessory load last of all your desk accessories (Multidesk Deluxe can do this for you easily) since this will allow W9 to see screen output calls first. You can also use the WARP9CNF.PRG to do this, running

it after bootup, with the caveats mentioned at the bottom of p. 45 of the manual.

- Mel

249. MiNTNet SLIP and TIA anyone?

Newsgroup: comp.sys.atari.st
Date: 1994-10-05 23:29:17 UTC
From: woodford@esca.com
Message-ID: <1994Oct5.232917.18930@esca.com>
Source record: 179652

Hi all,

Sorry if this has already been covered in previous posts...
My other internet service provider (not my employer!) has recently
installed 'TIA' on their system. For those who haven't heard of it,
it allows SLIP connections over your standard dial-up interactive shell
account. Apparently, it works with Mac and PC native SLIP implementations
without any problems. There are no static or variable IP addresses
to mess with, since TIA makes all external connections look like
they are coming from the service provider's host. Never-the-less,
all the usual internet services are available over the link; eg.
DNS, telnet, ftp, www and gopher etc.

In the next day or so, I'm going to attempt the same thing with
MiNTNet SLIP on my Atari. Are there any other Atari users who have
done this already? If so, any pitfalls I need to lookout for?

I'm going to be running Mgr on top of all this so I can have
multiple windows open over the link, plus a couple of local windows.
Should be interesting to see how the old ST copes with this!
(I don't expect there to be much memory left out of 4Mb with all
this going on!)

Cheers, Steve

PS. More info on TIA can be found at http://marketplace.com/tia/tiahome.html

251. autoboot on mega STE

Newsgroup: comp.sys.atari.st
Date: 1994-10-06 00:00:08 UTC
From: Nesral@closer.brisnet.org.au
Message-ID: <f7c_9410070325@softtech.brisnet.org.au>
Source record: 179776

Sorry, I picked up this subject second hand so I don't know your name. But

I may be of some help. You will find in your MSTe manual on page 2-5
information under "Starting your system from a floppy Start up disk" sixth

paragraph down, section No 2.
I presume that you are trying to get floppy based games to auto boot from
drive A with out using the internal HD. Obviously if it is possible to run

these games from the internal HD then I would have to recommend that you
do that as you will find that the games will load and run faster. If this
is not possible and you have to run them from floppy then I recommend the
following procedure.

1. Switch off the machine.
2. Put the boot disk in drive A.
3. Turn on the machine.
4. Wach the floppy drive light and after it flashes the first time depress
the key on the keyboard (lower left hand corner) marked "Alternate".
5. Continue to press the Alternate key until it becomes obvious that the
boot has worked. ie. the program is running.
6. If the desktop depicting drive A & B and the trash can appears (and or
plus hard disk devices.) the auto boot has failed.
If the auto boot has failed proceed as follows:-
a. Perform a Warm boot. (press the reset switch[left hand side of the
machine]) or (hold down together the Control & Alternate keys together
and press the Delete key).
b.As in step 4.
C.As in step 5.

If the boot fails again then start again from step 1.
The MSTe can be very hard to get on with during this procedure so a bit of

experimentation is necessary.

The object of holding down the Alternate key during the boot is to disable

the internal HD and to let the system boot from the floppy. However I have

found some software that will not boot because the HD is still seen as
present by the system, to avoide this I have had a switch installed in the

front pannel of my MSTe that shuts down the HD.

I am sorry about the fine detail in the setting out of the procedure for
booting from floppy, but if I do it that way there is less chance of you
making a mistake. Let's face it we don't exactly live around the corner
from each other.

I hope this has been of some help and that your problem is as simple as
not holding down the Alternate key on boot up.

Seeyoulatermate.

I have been given a copy of NVDI V2.50. Unfortunately the entire program is in German!! Can someone please tell me how to install NVDI.

I read a review of NVDI in an older issue of ST Review which said that installing the program was easy. All that is required is to use the installation program on the disk, enter your name, address and serial number and the drive you want to boot NVDI from. What does it mean by "DISK SERIAL NUMBER" and "ADDRESS"????

If you know how to install NVDI V2.50 please P-mail me on;

Hello!

I would seriously like to register your program, but sending you 5 pounds
would probably cost me quite a bit more than the equivalent in dollars.

I wrote ANSITerm. The registered version is $15. How about a trade?
Considering that you have a Falcon, I don't know how useful that would be
to you, but if you can think of anything else, I'm willing to talk.

Thanks.

P.S. I have version 0.6, and I was able to play two of the 8 MPEG's I have.

262. ST stuff in Japan

Newsgroup: comp.sys.atari.st
Date: 1994-10-06 02:48:11 UTC
From: whitema@rtsg.mot.com
Message-ID: <36vohb$7rk@delphinium.cig.mot.com>
Source record: 179763

Facing the possibility of going to Japan for a while next year, I
thought I'd see if the ol' 1040 STe could survive over there.
The monitor and laser printer can take the voltage/frequency, but the
Atari says 117V@60 Hz, while Japan is 100V@50Hz. Is this a problem?
Does any part of a 1040 STe need 60 Hz from the power line?
Also, what about my hard drive? It's an ICD FaST case and ICD SCSI+
host adapter, but ICD did not include electrical specifications in
their manual. My Hayes modem's adapter also say 60 Hz. If I recall
my transformer stuff, frequency doesn't pay that big a part, especially
10 Hz at these piddly low frequecies anyway.

Thanks,
Mike

Source record: 179787

I am trying to move lots of data from an ATARI TT (with TOS 3.01 I think)
to an IBM PC.

Both have a Syquest SQ5110 drive that reads and writes 88MB removable
cartridges.

The Atari has its drive connected through SCSI using TTs direct SCSI interface.
The IBM uses also SCSI and a on board NCR adapter to read the Syquest drive.

I tried to format/parition it under DOS but the ATARI could not recognize
the cartridge. The other way around is even worse.

What do I have to do? Are there drivers for the ATARI to read/write DOS
formated Syquest 88MB cartridges? Where can I get them on the net.

Thanks, Stefan

Please post, because I am posting this from a friends account and I don't

It's possible... If you have a Falcon or a TT all you need is a cable. For
for the other machines you need a SCSI-hostadaptor too.

John,

I'm from the Detroit area, and the the only computer store that I know of that deals in Atari is Power Computers, over in Clinton Township on Garfeild Rd. I think it's between 16 and 17 mile roads, which puts it at least an hour's drive from you. If you find any more, please let me know.

Thanks,
Tom

Atari Corp make the computers and the Jaguar, and Atari Games Corp make
the arcade machines. When you see the Atari Logo, that's why you will
always see either ATARI or ATARI GAMES below the fuji.

Hi!

>b) failing that, has anyone got it running that could mail me their config for
>me to examine?

I've been using PowerDos for more than one year until I got MagiX, which
doesn't work together with PowerDos.

Powerdos must be in the AUTO-folder as the first program, the configfile
has to be placed in a subdirectory named POWERDOS.

\AUTO\POWERDOS.PRG
\POWERDOS\CONFIGUR

This is, where PowerDos and PDEXPERT will search for the configfile. You
can safely use the default configfile, all you have to take care of is the
cache-statement because if PowerDos can't get enough memory it will refuse
to start at all and probably throw a few bombs :-(.

I have a completely documented version of PowerDos with a sample
configuration file on my BBS, it's about 95 Kb, perhaps I can mail it to
you (hope my uplink won't kill me)..

In case you have too much money, here's my BBS-Number: 0049-7131-507329

> used GEM routines. Unfortunately, NVDI comes with a benchmark program
Text is the most important feature. But each application that uses only text
is fast enough for me, regardless if you take Warp 9, NVDI or whatelse.

Applications where _I_ have to wait for seconds for a redraw are graphic
applications.

Let's define important/unimportant:

- Important(1) = what is used most frequently
Then text is the most important feature

- Important(2) = what I wait for most frequently (what steals my time!)
Then graphics is the most important feature.

2) is my choice.

> which is totally slanted. It contains numerous tests which measure lots
> of system calls which rarely occur in daily use of the Atari (such as
> circle drawing) and which Warp 9 does not waste memory to handle. This
The most time consuming part of the circle drawing is to fill an area.
This is important(1) and important(2)

> leads many people to believe that NVDI is "much faster" than Warp 9,
> because only a couple of the tests in its benchmark program measure
> routines which are frequently used (and Warp 9 beats NVDI in these tests).
>
> One area where NVDI is faster than Warp 9 even at text and frequently used

>
> Doubters may take my comments with a grain of salt, but I don't care. If I
> were trying to mislead people, I certainly wouldn't have mentioned Warp 9's
> downfalls. Those who don't believe me are free to purchase NVDI and make
> their own assessments.
See the diffencence between important(1) and important(2)

Those who have both programs (Warp 9 and NVDI) say that there are a lot of
bugs in Warp 9 but not in NVDI.
Usually you think these are bugs in the application until you have Warp9
AND NVDI.

And:
Since NVDI 3.0 you have to compare NVDI 3.0 with Warp9+SpeedoGDOS 5.0

> ----------
> J.EIDSVOOG1 [CodeHead] at 18:35 PDT
>
[...]
> And of course, Warp 9 has numerous other features not found in NVDI or
> Quick
> ST.

Speedo fonts? Type 1 fonts? VERY fast printer drivers (10 kB long)?
That's important for _me_.
Could you enumerate the "numerous other features not found in NVDI"?
I want to put them into the GDOS FAQ.

> NUMBER" and "ADDRESS"????
Where's the problem? What you quoted is English!

The disk serial number is the serial number on your disk.
If you don't have the disk it's piracy.

The address is your address.

Works fine here! If you don't see the Minixfs startup messages, check
to see where Mint is loading the XFS files from.

Did you compile with -DMULTITOS ? That may make a difference.

Agreed. There are also good Dutch products (well, at least one :-)

I find that software coming from Europe is also more compatible with
different graphics cards and stuff, which is an extra attraction.

I'm still keen to find out what 2B are adding to MagiC 3, though.
Anyone?

283. Problem: 1040ST Power Supply

Newsgroup: comp.sys.atari.st
Date: 1994-10-06 13:03:08 UTC
From: tom_smith@ccmgw.bal.mmc.com
Message-ID: <370sic$ima@theopolis.orl.mmc.com>
Source record: 179680
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I have a 1040ST (1986 vintage) that no longer works. The power light doesn't come on. I don't know a
lot about hardware, but I did pull out the Power Supply board and found that its getting 125 volts, the
switch is OK, and so is the fuse. So much for the things I can fix. I then checked the 6 wires coming off
the board: 2 red 5 Volts, 1 blue 12 Volt, and 3 black (I guess these are the grounds?). I found that there
is no voltage across any of these, e.g., red to black, blue to black. I think this is a bad sign!

Can anyone tell me if I tested this correctly?

Can anyone tell me where I can find a Power Supply?

The Power Supply board is labeled: 5657-B001-1.
The Mother Board is labeled: C070523-001 1986 Rev C

I'll take any help that I can get.

Thanks.

II>configurations, the number of combinations is at least 25*24!

II>BTW I am posting from MausNet, a European network, which has recently
II>connected to the comp.sys.atari.* newsgroups, so I am not sure if the gate
II>*into* Internet is working. Can someone confirm this is ok. I tried to post
II>a similar question on comp.sys.atari.st.tech without reply :(

Ian, the ST parallel port is output-only. If you want a bidirectional
cionnection, you will have to use the serial port and a null modem. The
good news is that you can go up to 19.2k with that method (I used it in
the past to link my original 520ST and several other types of systems,
including IBM clones and Atari 8-bit, albeit the 8-bit is limited to
9600). The bad news is that it's still too darn slow. You can buy a
null modem connector for between $5 and $20 at most computer specialty
shops.

Another option is a hardweare modification that makes the ST printer
port bidirectional. I don't have the details on that one, but I'd bet
Mickey Boyd does.

AFAIK development on HSC and Gemfast ceased last year when Ian Lepore
sold his Atari stuff and moved to California.

There are better GEM libraries around, including Enhanced-GEM 2.00
which is at Hensa and atari.archive (egem200.lzh). As for C compilers,
there's always gcc if you've got memory to spare, or Pure C/Lattice C
which are both commercial (and very good too).

From: blade01@pplnet.com
Message-ID: <03795CAMAVFRPLDUQLH@pplnet.com>
Source record: 179686

IC>Now for the bad news. 1 meg Falcon's are like birds with no wings,
they
IC>just don't function the way they should. You are severly limited in
IC>everything you do, 1 meg on an ST may be fine for most applications, but
IC>on a Falcon it just doesn't do the machine justice. Want to view some of
IC>those amazing True Colour graphics? Forget it. Heck even in 256 colour
IC>mode the 1 meg machines are pushing it a bit. The majority of Falcon Pd
IC>and Shareware will not operate on 1 meg machines, lots of the utils will
IC>but 99% of the demos will die, most the games will have problems and the
IC>other misc software will be a really hit and miss affair.

IC>The solution? Spend 599 on the 4 meg machine. Or hope and pray the
IC>Atari giants like Gasteiner and Compo start to kick out 4 meg upgrades at
IC>nice cheap prices.

Chris Richards in the USA has already produced a Falcon SIMM card that
replaces the Atari RAM card - there's room for 4 SIMMs, which allows for
either 4 Mb or 16(14) Mb of RAM in the beast and it's a beautiful fit.
I saw it installed at the Atari Safari here in Houston last year.

>wallet to the tune of 1200 pounds. That doesn't include things like a 32mhz
>CPU upgrade, a tower case and decent keyboard, a multisync, etc.

It isn't *that* bad. If you do decide to change computers in the future
you can still use lots of bits from a Falcon (or ST). For instance,
external SCSI drives should be no problem, as well as memory (SIMMS) and
the monitor. Whatever machine you have you still need a decent monitor.
How many PC's do you see using a low-res colour monitor (320x200)?

>The thing is still insanely overpriced for what is, lets face it, a hobbists
>machine.

It is overpriced agreed.
This can be minimized though if you are careful....

297. Atari TT -> IBM PC with Syquest 88 MB drive?

Newsgroup: comp.sys.atari.st
Date: 1994-10-06 14:13:31 UTC
From: kimmel@curuws
Message-ID: <Cx98uK.KJx@euu.siemens-albis.ch>
Source record: 179627

I am trying to move lots of data from an ATARI TT (with TOS 3.01
I think) to an IBM PC.

Both have a Syquest SQ5110 drive that reads and writes 88MB removable
cartridges.

The Atari has its drive connected through SCSI using TTs direct
SCSI interface.
The IBM uses also SCSI and an on board NCR adapter to read the
Syquest drive.

I tried to format/parition it under DOS but the ATARI could not recognize
the cartridge. The other way around is even worse.

What do I have to do? Are there drivers for the ATARI to read/write DOS
formated Syquest 88MB cartridges? Where can I get them on the net.

Thanks, Stefan

298. Re: HSC status and author id

Newsgroup: comp.sys.atari.st
Date: 1994-10-06 14:23:27 UTC
From: dsb@amazon.cs.duke.edu
Message-ID: <37118v$mu9@amazon.cs.duke.edu>
Source record: 179603

From the Holy Book of <1994Oct5.182415.7910@vax.sbu.ac.uk>
as spake by fountad@vax.sbu.ac.uk :
>Does anyone know what the status of Heat n Serve C is? I have v1.40 with
>Gemfast v1.8. Is there a later version? Is Ian Lepore or anyone still working
>on it? Did the commercial Gemfast ever materialise?
>
>Also, does Ian Lepore have an Internet account? The one in the HSC 1.40 docs
>(ilepore@nyx.cs.du.edu) is dead.

As Chris Ridd has already noted, Ian has ceased development on HSC and
AFAIK left the net. There is a beta version of HSC 2.01, but it's not
really stable enough to release.

However, there is an upgrade path -- Sozobon C eXtended version, by
Jerry Geiger (jerry@zelator.de). As I understand, it's a port back to
the Atari of the DOS port of the original Sozobon C. You can get it
from ftp.cs.tu-berlin.de[*] in /pub/atari/Programming/Sozobon.c. It
includes (I believe) an improved Gemfast library, and the MiNTlibs are
also available for it.

-sbigham

[*] And if anyone knows of another site that carries this, please let me
know; tu-berlin can be deathly slow from overseas.

AFAIK, H&S C v1.40 and Gemfast v2.0 are the most recent. From what I remember seeing in the Gemfast 2.0 release (very recently), Ian Lepore was "leaving" and would probably not be making any more Atari software. The release of Gemfast 2.0 mentioned that it hadn't been extensively tested and was probably buggy, but since he wouldn't be able to support it anymore...

>Also, does Ian Lepore have an Internet account? The one in the HSC 1.40 docs
>(ilepore@nyx.cs.du.edu) is dead.

Given the above, I doubt that he does.

Of course, my information may be faulty. Someone correct me if they know more.

Thanks,
Tom

: >Also, does Ian Lepore have an Internet account? The one in the HSC 1.40 docs
: >(ilepore@nyx.cs.du.edu) is dead.

: There are better GEM libraries around, including Enhanced-GEM 2.00
: which is at Hensa and atari.archive (egem200.lzh). As for C compilers,
: there's always gcc if you've got memory to spare, or Pure C/Lattice C
: which are both commercial (and very good too).

There was supposed to be a v2 of HSC going around....in it's beta
stages...then Ian just disappeared....si I think that tere is no more
HSC...or maybe Scott Bigham, or Erland Nagel can expand on this...they
were also a part of the HSC mailing list...

If you want to stay with the HSC type of thing, then you could always
get Extended Sozobon....which will be making an appearance at a HENSA
near you soon... ;->

I'll post later, when it is on-line...

I was a little bored last night, so I thought I'd try a few games. I'd just go the registered english version of Walls of Illusion, so I thought I'd try that. However, all that happens is that it says :

TOSVERSION 3.6
LOADING ARCAN TT

and then nothing else. I even tried leaving it for 10 minutes or so. has anyone managed to get it to run on a TT?

Having failed at that, I thought I'd try Frontier on the hard drive. All that does is give my 4 bombs. With MiNT installed, it doesn't bomb, but it locks up later. I can only get it to run when it boots from the auto folder on the floppy. Can anyone tell me how to get it to run on the hard drive of a TT?

J

PS. I gave up after that and built some Lego.

Hi

Look at these savings!

1) That's Write 3 40 pounds off
2) Imagecopy 3 5 pounds off
3) Fontkit Plus 4 11 pounds off

How do you get these savings?

Easy.

1) That's Write 3 costs #140 new, but you can upgrade from Write On! for only #90. If you buy my copy of Write On! for #10, you save #40.

2) Similarly, upgrade my copy of Imagecopy 1, for sale at #5, and save #20.

3) And buy my Fontkit plus 3.4 for #5 and save #11 on the #25 retail price by upgrading for #8.95.

Other bargains (all including postage) include:

Timeworks 2 DTP + font disks #20)
User's Guide to Timeworks DTP #6) #22.50 for the pair
Naksha Mouse (incl. Op Stealth) #7
Quick ST 3 #4
Molgraph 2 #4
Quartet & Playback (stereo) #10
Multiface ST #5

Please do post these instructions. I don't yet have the game, but I'll
probably break down and get it soon (I know me :-).

The ICD software can deal with removable media devices (primarily Syquest
removable platter hard drives, but can also include Floptical disks with the
right host adaptor) just fine, no problems, a joy to use, super cool, etc.
You can also share data with Macs (no problem, under Spectre) and PCs
(more of a problem, unless you restrict partition size to 32mb or 16mb,
depending on TOS version, in which case it is trivial) using removable
platter drives. Syquest drives are great! The 3.5" 105mb units are dirt
cheap nowadays, BTW.

This is probably true, though the huge explosion of CDROM stuff has certainly
helped (as adding read/write capability to a read-only removable paradigm is
relatively easy). UNIX boxes have been able to handle Syquest drives for
years, but the drivers to do so are commercial and expensive, and Syquest
units don't really have enough size to interest more UNIX folks. As far as
root permissions go, that is easy to safely get around this for particular
devices with just a bit of C code. Floppies on Suns and other UNIX boxes
have been user mount/unmountable for years. Newer versions of UNIX come
with special daemons just for such user-removable media (Volume Manager in
Solaris 2.x, for example, though it is in some ways awful as well :-).

Anything that is available on atari.archive.umich.edu is either PD,
Shareware, or a commercial demo. Both Magic Spooler and Fast Print are
either PD or Shareware.

Incidentally, Fast Print alone produces the best acceleration. Magic
Spooler is still useful for printing to a file, or for straight spooling.

There is a commercial program called Outburst that is similar to Fast Print,
but I have not tested it.

>
> Thanks!
>
> --
> --Chris
>

Modem ports 1 & 2 each are run by an MFP chip. Serial ports 1 & 2 (or
Serial 1 & the LAN port) are run by an SCC chip.

The max bps rates are:
Modem 1 - 19,200
Modem 2 - 153,600
Serial 1 - 19,200
Serial 2 -125,000

But TOS can't set the rate higher than 19,200. But at least in Connect,
these higher speeds are available.

I'm not sure, but I suggest you call 1-800-448-TOAD and get yourself one
of their catalogs. They are superb, lots of good info in there. Also,
if you call 800-800-2563, you can get a free 3 issue trial subscription
to ST Informer, which would yield numerous ads for Atari equipment. Not
bad for two free phone calls, eh?

Can anyone tell me how I'm supposed to get past Level 2 on Mission 9 of Cannon Fodder. It seems based entirely on having extremely good luck.

It's the level consisting mostly of water in which there are gun-turrets dotted around the land which blow you up as soon as you get into range....

Level 1 is called "Around the Garden". I can't recall what Level 2 is called. (And WHY oh WHY didn't they support more than 512K of RAM!? Or STE palette/sounds/scrolling? It's one of the nastier ports I've seen!

They even left out "Boot-Hill" which only consists of a single picture basically.....

> : Hope this helps 8-)

While the above is true, note that the original Link is no longer made.
The Link2 supports parity, and is truly plug-and-play with external Mac
devices. At worst, you might have to move a jumper on the drive to
provide terminator power (from which the Link and Link2 operate). An LED
on the Link2 shows you when this is needed.

The Link2 is about $90US from Toad computers and other places. It comes
with all the software needed to make such a drive work. It looks like
an adaptor plug, and is completely external.

>whatelse.
>
>Applications where _I_ have to wait for seconds for a redraw are graphic
>applications.

What went here (your description of what was important to you for a screen
accelerator), serves to show that each program meets slightly different
needs, and that buyers should therefor purchase whichever program is best
suited to their needs. In your case, it's obvious that the greater
attention the makers of NVDI paid to certain graphics routines (like
circle drawing) has made that program better in your eyes.

>Those who have both programs (Warp 9 and NVDI) say that there are a lot of
>bugs in Warp 9 but not in NVDI.
>Usually you think these are bugs in the application until you have Warp9
>AND NVDI.

I've found that the bugs are usually due one of several things: AUTO
program conflicts which require a slightly different order in the AUTO
folder (a common problem on Atari computers); incompatible hardware
(graphics modes that aren't supported, etc.); and software
incompatibilities, which usually seem to be the fault of the application,
and not of Warp9.

>> ----------
>> J.EIDSVOOG1 [CodeHead] at 18:35 PDT

[...]
>> And of course, Warp 9 has numerous other features not found in NVDI or
>> Quick

>> ST.
>
>Speedo fonts? Type 1 fonts? VERY fast printer drivers (10 kB long)?
>That's important for _me_.

Warp9 doesn't pretend to have GDOS built in; it also doesn't take up the extra memory those features require. For someone like me who uses GDOS only a couple times a month, these things aren't important.

>Could you enumerate the "numerous other features not found in NVDI"?
>I want to put them into the GDOS FAQ.

Sure. Warp9 doesn't have a built-in GDOS replacement (too bad; G+Plus was the best, before it was outdated!). It does have: an excellent mouse accelerater; Pinhead (like having the "fastload" bit set, only faster); the ability to replace the system font (although NVDI may be better at that); and a function to replace the desktop background with either a picture or a fill. Oh, and I almost forgot, what may very well be the best modular screen saver available for Atari computers (certainly some people think so). Combine that with the fact that Warp9 is as fast as or faster than NVDI in most catagories (certainly the ones most used by the OS), and you have an excellent graphics accelerator.

It is true that Warp9 is beginning to show its age, and that NVDI is generally compatible with a broader range of software and hardware configurations. I never intended to give the impression otherwise, only to give fair voice to what is, IMHO, an excellent and still extremely useful product.

> anything. That's a point, can anyone give me a good reason to upgrade
> my 1Mb machine ? What bene fits would I get from say, 2.5Mb ?

Extra memory only really comes into its own when you have a specific program to use it. In my case I'm in to C programming and operating system (MTOS/MiNT). Its very handy to have lots of memory as much stuff in these areas is ported from UNIX and requires lots of memory. Other people find it useful for DTP, music, all sorts of sampling and graphics.

Of couse it also helps to have a faster processor ;-)

Even for general use 2.5MB is useful. I have a 2.5MB STM which proved a very adequate workhorse untill I decided I needed more horsepower. Even when doing mundane things, it was nice to have plenty of memory and enough space for decent HD caches.

:-)

> telephone network in the world. The answer may be to hack some device
> which already has pretty world-wide approval -- but what???

I'm pretty sure that in the UK, as soon as you hack an approved device it ceases to be approved! OTOH in the UK, nothing is approved until the BABT approve it, so you wouldn't be able to skip UK approval anyway.

My own opinion is that the DSP modem is dead in the water. Sure - using a DSP for a modem is a *good* idea, but when dedicated modems with V32bis+v42/v42bis+FAX can be had for a little over 100ukp, the margins for making a Falcon add on don't make sense. There just isn't enough money in it anymore.

:-(

Roland.

I forgot who wrote this, but it starts with az:

az>fvdakker@sterbbs.nl writes:
az>
az>Are you using a software-only version of the ScreenBlaster? I got
az>mine from a place in USA, Compo software or something, and got a
az>VERY small package of documentation. But I must say, its really
az>plug-and-play, and works wonderfully. I run my Falcon at
az>800*600 all the time now, and when I really need it, I can go
az>to 1024*768

Nope Hard and software. The trouble was installing it, because I want
to understand everything and try everything.
With screenblaster that isn't a very good idea if you don't know what
you're doing (like me).
Fortunately my Screen survived and now I'm using it on 758*516 or
something like that.
I think Atari should include screenblaster on every Falcon!
It's _very_ good and *much* better.

Greetings,

Frits.

Did Toad Computers ever actually send out their new catalog? I guess I'm asking if anyone has received one yet?

Is there an email address I could send another request for a catalog?

Richard,
Personally, as a Falcon owner, I like things the way they
are. The only reason for changing things as I see it is
if Falcon talk is annoying the ST users (is it, guys?)
I mean most messeges that pertain to the ST can be applied
to the Falcon as well. Just my HO :-).
Anyway, would there be enough traffic for a Falcon group?

Try formatting the disk on the PC, with several partitions of 32mb or less
each. The "normal" MSDOS partition scheme is recognized by the ICD software
version 6.4.3 and higher (may have even been before that, but I can vouch
for 6.4.3+). Anything over 32mb is a BigDOS partition. I'm not sure about
other software but it is worth a try. If you get the Pro level ICD software,
you should be able to do it.

I bought some used 44mb cartridges from a PC buddy, and could read and
write those types of partitions just fine.

>found/already in use.." and it quits.

So it goes. Both MGR and MultiTOS (actually the MultiAES) try to get exclusive
access to the keyboard and mouse, and both use the VDI. Aside from the fact
that there's no scheme for sharing access to these devices, the VDI is also
non-reentrant. You can run one or the other, but not both at once.

You could perhaps write a GEM/AES emulator under MGR, or an MGR emulator under
GEM AES. Neither one would probably be particularly wonderful.

Yes, that's true :-(I spoke to Mark on the day he sold his system, as a
friend of mine has Mark's HD.

> I am sure that Mark could use the small Shareware fee he is asking
> for it! Might even get hin back into ST, if he get enough of them!

I don't know how Mark feels about this, but I think if anyone wants to
register they shuold be aware that there is no support. Then again, the
fee is so small, it's really only a "thank you" :-)

Here is a bit more:

AEO News Bulletin #6
Wednesday, Sept. 28, 1994

According to a press release issued today, Sega Enterprises, Ltd. is
plunging nearly $90 million into Atari Corporation. $50 million to
come from direct payments for worldwide access to Atari Corporation
videogame patents for several years. The remaining $40 million will
come from a purchase of 4.7 million shares of Atari common stock.

To quell all rumors, this is -not- a "buyout" of Atari Corporation.
The size of stock purchased is 7.4 percent of total Atari Corporation
stock.

In the same joint press release, the two videogame giants announced
that they may come to agreement on cross-platform title licensing in
the future.

The press release follows:

Contact: Sega Enterprises. Ltd. Atari Corporation
Richard Brudvik-Lindner Sam Tramiel
(415) 802-3657 (408) 745-8824
August Liguori
(408) 745-2069

Manning, Selvage & Lee (for Sega)
Brenda Lynch
(818) 509-1840

SEGA AND ATARI ANNOUNCE LONG-TERM LICENSING AGREEMENTS, EQUITY
INVESTMENT, AND RESOLUTlON OF DISPUTES

SUNNYVALE, Calif. (September 28, 1994) -- Sega Enterprises, Ltd., and Atari Corporation (AMEX:ATC) announced today an affiliation that includes several agreements designed to serve as the basis of future working arrangements between the two video game manufacturers.

Under the terms of the agreements:

- Sega will receive worldwide, non-exclusive rights with certain exceptions to Atari's extensive library of patents, a number of which extend beyond the turn of the century. The agreement covers Sega, its subsidiaries, its licensees, and its customers for more than 70 U.S. patents and applications, for a fully prepaid royalty to Atari covering the remaining 7 years of certain patents, amortized at approximately $7 million per year. Atari will therefore receive a total of $50 million, les are all trademarks or registered trademarks of Atari
Corporation. All other trademarks mentioned in this edition of AEO News! belong to their respective holders.

OK, I'll bite. The reason I didn't like GEnie is because I found it difficult to find things on it. The categories and libraries, etc. And downloading was difficult, for me at least. Sometimes I could unzip stuff, sometimes I couldn't. And I found their news and stocks (only daily closeing quotes) services irrelevant; AOL has lots of daily newspapers, and major magazines like Time, on line; their stocks are updated every fifteen minutes, and have a nifty portfolio feature that computes your net worth as of that minute . AOL's stuff is easy to download, and most of the stuff unzips itself. I couln't access USENET on GEnie. I can on AOL. etc., etc. The proof for me is that I have racked up a $60 bill on my first month on AOL. I found GEnie so cumbersome to use that I didn't like to log on, and I rarely exceeded the nine bucks a month. I must admit, however, that GEnie does support Atari, but I could't figure out how to get the most out of it. My problem, I know, but I don't like spending hours on line to try to figure stuff out. AOL has a user user friendly graphic interface. -- Mark van Wyk

Must be a driver software problem. Try to trace what's happening
with SysMon. From a flaky part of my main memory, I seem to remember
that Protar's driver software hooks into both trap 1 and 2 to
boot from other drives than C and for other purposes. Try to switch
off these special features if the driver configuration software
allows this.

Add a standard host adapter such as the ICD Link and a cable, that's
it.

Do you want to be able to read the Mac partitions on the drive?
Spectre might be able to do this.

> this going on!)

Hi Steve,

I'm using MiNT-NET doing SLIP every day. All important
clients are ported from BSD/Linux/Unix to MiNT as ftp, telnet, lynx,
RPC, nfs, ping, ntalk, udpprobe, irc ...

What do you need?
a MiNT version higher than plain 1.10
Minixfs 0.6pl10
MiNT-OS of S. USHER
and MiNT-NET (0.53 is the current version)

I don't have any expierence with mgr, I'm using PD Korn shell 4.8 r11
and virtuell consoles of J. Lock (simply great)

What are the pitfalls?
I can't see any pitfalls yet.

>
> Cheers, Steve

Sozobon X C is excellent because it features profiling and extended debugging functions; this means that when a crash occurs, the source code file and line number at which the bomb happened is displayed.

However, some of the Xdlibs functions seem to be a bit dodgy - I've had problems with bzero() and putl(). Also, GemFast 1.5 is given with it, which is not as good as 1.8. But, and this is what I do, I just use 1.8 with it. Apart from these problems (which will hopefully soon disappear) it is a great and very fast system.

Also available are tools such as an include file compiler and a version of Lint. Unfortunately some of the tools are in German, but hopefully they'll be English versions soon.

British ftp-ers can get the stuff from src.doc.ic.ac.uk. Just cd to 'computing/systems/atari/uni-paderborn/lang/c/sozobon-v2x' and the archive files are there.

Stuart.

Richard,

Yep, I'd support the creation of such a group, given that enough people
agree (it'd be unfortunate if we created one and the traffic on it was
so slow that it wasn't worth using).

Anyone else support this worthwhile cause?

David

[P.S. Richard, I've been trying to email you for the last few days but
soc.staffs.ac.uk doesn't seem to recognise your email address. Peculiar.

: Teradesk, now at version 1.39. Very nice desktop replacement, though you
: may not need it having TOS 2.06.

I was a fervent Teradesk user before I got Magic. Teradesk, in my view, is
the perfect replacement desktop for singletasking Ataris, but once I had
a multitasking OS, it was not really suitable, as all programs started are as
child processes of Teradesk.

Now that I have sussed out MagXdesk, I am very happy with it, but I still
miss several features of Teradesk. I would imagine that Teradesk could easily
be updated to take advantage of Multitasking, as only a simple shel_write
call is needed, instead of I assume the current pexec call.

Is the author of Teradesk on the 'net or just availabe by BBS?

Beleive me: You did the right decision.

> Would you care to elaborate on exactly what made you change from the Falcon
> to the TT?

- The FALCON is too slow. With those graphics extension like BlowUP the machine gets even slower. And I prefer 1280x960x2 on a nice 19" monitor and I do not need colours.

- The FALCON does not have much RAM. 4 MB isn't a lot if you want to use MultiTOS, MiNT, MiNT-Net and/or gcc. The only RAM upgrade option is to waste *six* MB: Pin your four MB card on the wall and buy the 16 MB card, from which two MB are always unused. After the waste of six MB, you have 0 (*zero*) MB of FastRAM.

- I've seen enough demos. But the demos are the only thing I miss on my TT. But I've recorded all the FALCON demos on video tape before selling it. ;)

- The FALCON has just one useful serial port. The TT has four of them. With my TT I can do a nullmodem connection to my Sun *and* to my UNIX PC. This was impossible with the FALCON (The FALCONs LAN port did not work for me).

- The TT has a keyboard. The "keyboard" of the FALCON is even worse than those of the old 520 ST. And the keyboard is external.

- The TT has space for an internal 3,5" hard disc any height. With the FALCON I had to have an external case for this.

- The TT has an VME bus. So if I one day have too much money, I'll buy one of those ethernet cards and use this rather than SLIP like at the moment.

Now it's your turn. If you want to tell me something about great accelerator cards for the FALCON, please shut up. If you want an overpowered CPU on a tall and slow bus, you should better get an ISA 468DX-2/66. The PCs have learnt late about the bus, but please do not do the same mistake now on the ATARIs. And remember: All the things I mentioned above are *included* in the TT! And my TT with TTM194, 4+4, 48 was *cheaper* than the FALCON I sold with 4 MB RAM, 42 MB IDE,

BlowUP and Multiscan monitor.

Bye,
Knarf

I assume this woudl be possible in the way you describe. However, it would
probably be marginally slower in operation. The size of memory wasted, even
if you set FOLDR500.PRG (i.e. 500 additional folders) is very small, and
hence this seems to be the preferred solution.

If I write a shareware program for example, I would want to spread it to
as many places as possible.
I can't think of any reason why a program should have a limited
distribution unless it is commercial, in which case it shouldn't be
anywhere on the net.

Right this is the situation as far as I can make out. After wanting Chroma Studio 24 for a year and hitting brick walls with news of of its release I was just about to give up when I read the preview in Falcon Owners Group Diskmagazine issue 6. This got going again and I was determined to find out what was happening once and for all.

I rang Floppyshop and a nice Scottish lady said that she neither knew when or at what price Chroma Studio would be out (useless). Not to be discouraged I phoned Douglas Little who is partly responsible for the programming of Chroma.

His reply was that there had been legal arguments between Black Scorpion and Floppyshop over ownership rights. Although the program was complete neither could go ahead and release it without the others say so, so it remains in limbo never to be released.

The good news is Apex is bigger and better. It was scheduled for release at the start of October but Douglas said it is more likely to be the end (I'll hold him to this) of October. The reason for the delay is beta testing is being finished and the manual is being written.

Personally I have my cheque book ready and will contact Titan soon to put my order in. Fingers crossed this looks like the best piece of graphics software for the Falcon.
I have some more information from my talk with Douglas in my Atari Web pages:

http://www.dl.ac.uk/MISC/ATARI/atari.html

Contact me with any questions and I'll do my best to sort them out.

Bye,

Can anyone recommend a complete C-COMPILER (totally ANSI compatible
so one can easily port source over to PC later) and LINKER, GEM-BASED
(editor included) shareware or commercial for an STFM (4 megs) that has all
regular libs stdio, maths, comms etc and with GRAPHICS?
I have looked at SozobonX,inconjunction with C.V.Wuellens ANSI C68
compiler which uses MiNT libs and CPP1.1.2 preprocessor but still I think
has limitations on size of functions and no. of variables owed to SozobonX (see
sozo docs). While this may be good for short programs, I need C package with
for path planning algorithms which tend to be a tad long!
With regard to commercial packages, I am aware of products from Hisoft
but little else; Prospero-C by Hisoft, as I understand, is an intro to C
language. The other package, ?Lattice C? is a bit expensive and I don't really
know of its compatibility with ANSI.
Any help warmly welcomed!

>difficult to find things on it. The categories and libraries, etc. And
>downloading was difficult, for me at least.

It is different from some other services, but with a little experimentation, it becomes very easy to use. If you use ST Aladdin (the GEnie-specific comms program), everything is automated and you spend very little time on-line. I like their BBS, though the library system leaves a little to be desired. Your downloading problem sounds like line noise, or perhaps your settings weren't quite right (this sometimes happens, if your modem settings aren't supported by GEnie - MNP5 can cause problems).

>Sometimes I could unzip
>stuff, sometimes I couldn't. And I found their news and stocks (only
>daily closeing quotes) services irrelevant; AOL has lots of daily
>newspapers, and major magazines like Time, on line; their stocks are
>updated every fifteen minutes, and have a nifty portfolio feature that
>computes your net worth as of that minute . AOL's stuff is easy to
>download, and most of the stuff unzips itself. I couln't access USENET on
>GEnie. I can on AOL. etc., etc.

I agree that GEnie isn't all that great for most bussiness services, but their Atari section is unrivaled, and they have a few other unique Round Tables.

>[...] GEnie does support Atari, but I
>could't figure out how to get the most out of it. My problem, I know, but
>I don't like spending hours on line to try to figure stuff out. AOL has a
>user user friendly graphic interface. -- Mark van Wyk

This problem is alleviated, as I said, by the use of Aladdin; I can do all sorts of things on-line (actually, I do them off-line, and Aladdin automatically logs on and takes care of things), and still keep my bill down.

For Atari support, GEnie is a hands-down winner, but if you have other, more pressing needs, AOL, CI$, or Prodigy are probably all better (in the USA; don't know about other countries ;-).

372. OutburST! info

Newsgroup: comp.sys.atari.st
Date: 1994-10-07 13:11:08 UTC
From: dburns@world.std.com
Message-ID: <CxB0MK.5xA@world.std.com>
Source record: 179573

Dear Mickey Boyd, et al;

I dug out my OutburST! manual. It claims up to 23 times speed increase, printing a Pagestream page in 13 seconds instead of 301 seconds under TOS 1.4 without OutburST! I'd say that's about right--it is an amazing increase in speed. It comes with drivers for Pagestream and Calamus, and works with HP Laserjet, Deskjet, Canon Bubblejet, and Postscript printers.

It comes with an ACC/CPX print spooler (text only) and set-up utility to automatically turn the spooler on/off, depending on the app you're running. The manual is very good, explaining usage and the way the program "fixes" the Atari print routines.

I installed it on my system a couple years ago, and never give it thought--it's proven campatible with everything I run, including Atariworks, Geneva, and NeoDesk4.

I've seen it available at Toad, or from the author, Frank Pawlowski. Costs about $30.00. Kind of high for a utility, but worth it in the time it saves. Published by:

I'm using the freeware GNU C package (compiler, preprocessor, libs,
assembler, linker, debugger, etc.), and am very happy with it. You'll find
it almost anywhere on the 'net. The only problem is that you need several
megs of hard drive space to fit it all (the compiler itself takes up more
than a meg!). It needs to be run from a shell (I use Gulam), and there is
a GUI shell available.

> With regard to commercial packages, I am aware of products from Hisoft

Lattice C is fully ANSI-compliant, and from what I've heard it's the
defacto compiler for serious application programming on the ST. Don't know
about HiSoft C, but I would guess it also is quite good.

no

To put it simply :)
I have version 2.1 (I think) and it doesn't work. I tried contacting the
authors and they said they might make a patch so it would work. This was
a *long* time ago and I have heard nothing since.
So I went out and bought Pagestream instead!
MUCH better than Timeworks (I would even go so far as to say usable!)
but it could still be improved on.

Lattice C from Hisoft is a very competant version which is, as far as I know,
now fully ANSI complient. The offer to get LC5.52 for 50GBP might have
finished by now, but if now then that's a really good deal.

I've used LC for the last couple of years (StormTracker is written in it -
see this month's STU coverdisk) and have never had any problems.

Yep, but you would not want people to distribute beta versions,
dont you?
Winx 2.3 is in an open betatest, you may download it from the
Maus OF2, but you re not allowed to spread it.
When the author thinks, WINX 2.3 is stable enough, it will
be officially released and can be spread.

Yes, but AFAICR, the author didn't want to release a beta test version
for the general public...and no one really wants to do that...

Just checking on it's status...

: What does it do differently?
One of the best features has got to be when you click on the top bar of
the window with the right button, the window disappears, and only
leaves the bar...another click, and the window returns...a lot less
clutter on the desktop.....sort of an alternative to an icon bar or
something..

: BTW is there a english version of the latest version of Gemini?
It's coming soon....

Richard,

it's a rather arduos procedure, if you are sure that you can get
over 100 Yes votes and no less than 1/3 No Votes that group can be passed.

It also requires you to read a lot of document files on the
ins and outs and why's of the creation of such a newsgroup. It takes about
3-4 months the whole procedure from starting the RFD (request for discussion,
and making the CFV: count for votes).

If you still think you wanna do it, email me and I'll help you

Yat @ Lexicor Software

>My problem is, that that disk is missing.
>
>How or where can i get the contents of that disk?

Well, you could try contacting Atari (good luck) or check with
one of the larger Atari dealers to see if they have TOS 1.0
on disk to sell you (good luck there, too).

Your BEST solution would be to purchase TOS in ROM form and
install those in your machine. AFAIK, the early TOS on disk
520ST's had the empty ROM sockets so it's an easy plug-in
task. You would be MUCH better off to buy a set of TOS 1.4
ROMs but for minimal expense, someone on the net must
surely have an old set of TOS 1.0 ROMs they could give you
or sell very cheaply. Not a huge market there, ya know?

Be aware there are different language versions of TOS so be
sure to get the one that matches your keyboard setup.

And while it wouldn't be strictly legal, someone could just
give you a copy of TOS 1.0 on disk if you can find someone who
still has it. I doubt if even _Atari_ would complain. :)

This was discussed in -depth- a few months ago. I don't believe it was ever formally put up as a CFD or CFV, however. Seems to me that the overriding consensus was that there was just insufficient traffic in c.s.a.s. to justify the formation of yet another Atari newsgroup.

I'd vote against it solely because it would be inconvenient for -me- to peruse so many newsgroups for Atari-related info and it would lead to even more cross-posting than we already endure. But I wouldn't argue the point if the majority of users wanted a .falcon group. It's no big deal to me. I just don't see the need for it. Whatever...

Apple makes a modem (Geoport) that utilizes the DSP chip -inside- its AV machines. The 'guts' is all in the software and the Geoport itself is mostly just a physical connection device. It's been poorly received, however, as the software seems to be glitchy and the unit sells for about what a decent 14.4 fax modem costs. I had one for awhile but dumped it when the Supra 14.4 LC jobs came out which works nicely on both my Mac -and- my Falcon.

Yep, Toad's new catalog came out about a month or so ago. It's very nicely done, 50+ pages, and very informative, too. It says $3.00 on the cover but I don't know if they ever actually charge anyone for it.

You can email to toad@genie.geis or phone 800-448-TOAD. You can use US 800 numbers from Canada, right? If not, another number is 410-544-6943.

Then there is always snail mail:

>I admit it - I've gotten spoiled using Framemaker at work. Is there
>any comparable package out there for us ST'ers? Or will I have to
>fudge around with a Spectre cartridge and the Mac version?

I agree that FrameMaker is very nice for long, technical documents (I use
both the Unix and Mac versions... anybody want to buy FrameMaker 3.0 for
the Mac for $100?). On the ST, you could give Calamus or Calamus SL a shot
(latter easily compares with FrameMaker's feature set) or PageStream 2.2.
I understand that Calligrapher is supposed to be good for mathematical
documents, but I don't have any first hand experience with it.

From Toad's latest catalog, the prices are:

Calamus 1.09N $179.00
Calamus SL $599.95
PageStream 2.2 $179.00
Calligrapher 3 $159.95

>It is different from some other services, but with a little
>experimentation, it becomes very easy to use. [...]

Dang, Tom beat me to it. :)

Tom covered it all very well but to add my $.02 I'll just say that for ATARI users, GEnie is your best bet for commercial online services. If you need business or professional services or if you own a Mac or PC then I would recommend either AOL or Compuserve. But GEnie's Atari forums are the best available, it's the 'official' network of Atari Corp (for whatever that's worth, anymore), it has more Atari files, forums, and product support areas than any other network, and the use of the excellent ST Aladdin software allows one to automate nearly everything you would want to do online, saving you big $$$ AND time. Uploads to GEnie are always free as is the ST Aladdin software.

I agree that AOL's graphic interface is snazzy and easy to use, but all those spiffy graphics takes a toll in throughput and online time and can be agonizingly slow at 2400 baud (which is all my local access number allows, darn it!). The biggest problem, of course, is that there is no Atari-based AOL access software, AFAIK.

Bottom line? .. "You pays yer money and you takes yer choice." ;-)

Prospero C is a full C package (not actually made by Hisoft, I think the company is not longer active). It was one of, if not the best C developmental packages for the ST for quite some time. I have also read that it has excellent documentation for all the ST specific stuff (AES, VDI, etc.).

I believe ST Review had Prospero C on a coverdisk fairly recently. They probably can sell you the full manual set for the package as well, in addition to the back-issue. This could be a great way for you to get a fine commercial C package for little money. Good luck.

I've actually found a faster way that Atari probably didn't intend
for anyone to find, but:

Hit the reset button and then hit space before the hard drive
re-initializes. The system will then boot from the floppy.

If you wait for the hard drive to initialize.. and it doesn't take
long on mine, then it will boot from the hard drive.

Hitting CTRL-ALT-right shift-DEL will also give a cold boot. A little
easier on the hardware this way.

I'm not sure about DC Right...
Start Selector replaces the GEM file selector with a much better selector box.
This ismainly intended for use with TOS 1.00, as it provides little click boxes
for choosing the disk drive/partition. With the old file selector in TOS 1.00
you were required to type in something like A:/*.* in a text box in order to
change the drive. If you are useing a TOS version gerater than 1.00 you don't
really need Start Selector, unless it offeres some extra features besides the
little disk drive icons.

> Does anyone know if Heat 'n' Serve C is Falcon compatible?

It produces Falcon friendly code AFAIK, except some of the GemFast stuff which craps out under MTOS etc.

The compiler should also run fine on the Falcon AIUI because Ian had two Falcon's at one time and modified the compiler to do so.

Krilovsky Kreutermann (krilov@u.washington.edu) wrote:
: I just recently got a 486-66, and would like to be able to use my
: portfolio to upload files to it. Where would I be able to find a
: cable for doing this, and would I need any special software, or other
: hardware for doing this.

You will need a Parallel Interface and a standard DB25 male to male
cable. The software you need to transfer files this way is supplied with
the Portfolio. There is also a Serial interface available, with this you
need to get a SMALL terminal program for the portfolio and transfer via
null-modem. I use the parallel version, its easier and the software is
built in to the PF, all you need is the software for the PC. You can also
print out whatever you want from the PF with this interface.

: Is Toad Computers still in business, and would this be something that they
: might carry?

Yes TOAD is very much still in business, and they used to carry
Portfolio stuff.. don't know if they still do or not.

If you need anything else (help wise) just ask, I've got one of these
things myself.

Message-ID: <BK.BW.781587357.1103527590.ylwm0118@yvr.cyberstore.ca>
Source record: 179581

Gotta quick query, has there ever been an update for FizzDizz past
version 2.2??? I'm looking particularly for a version that doesn't
bomb when the editer window is activated, and one which will support
speeds past 19200.

That is a BIG problem, I've got a 28.8 and I hate every term but FizzDizz!
What's a TT owner to do?

Sigh. Any ideas?

I'm not exactly sure how looking to buy a legitimate copy of First Word Plus qualifies as piracy but I guess there will always be a paranoid member in the crowd. Seems a little strange that I get accused of being a pirate just because I want to buy a piece of software. I had rather assumed it would be easier to buy another copy than to get a replacement for what is now about 6 year old software. I'm quite sure I don't have a receipt any longer as I haven't even used the st in about 3 years. I'm just now getting it out of the closet because my parents are interested in a cheap word processor. As I don't seem to be having much luck locating a replacement copy I'd appreciate it if someone could provide a manufacturer contact number or even let me know if one exists.

My apologies to all of you out there. I accidentally posted two requests to see if anyone wanted my modem and box of OS/2. I'm new to the Internet and somehow attached my posts to someone elses (in the form of a reply). The person had cross-posted (it seems) to practically every Usenet from Australia to Russia. Mine, unfortunately, went along for the ride. I had not intended those posts to go to most of the forums in which they ended up.

The responses I got from those posts ranged from very earnest parties interested in the items I had... to many who politely alerted me to my cross-posting error... to (quite disturbing to me) angry and insulting people who blindly assumed I had done it deliberately. Some of those posts actually spewed forth obscene language at me (and they had the nerve of accusing "me"of misusing the Internet!

To all of you who stumbled upon my two posts and foundthey they did not belong in your forum, again I am truly sorry for the mistake. It won't happen again.

From: kkallio@vipunen.hut.fi
Message-ID: <kkallio.781607766@vipunen.hut.fi>
Source record: 179590
Cross-posted to: comp.sys.atari.st,maus.sys.atari.software,sfnet.atk.atari

I have just uploaded a demo version of a tunnel-section of a game called
"Stardust" to following ftp-sites:

ftp.uni-kl.de
ftp.funet.fi

I will also upload it to atari.archive.umich.edu as soon as I can get a
connection.

Get the files sdtunnel.lha and sdtunnel.readme. They may not be visible
right now, but usually it doesn't take very long from the ftp stuff to
move them to the appropriate directory.

The original Amiga-version as well as this Atari-conversion are published
by Bloodhouse Ltd. The Atari conversion is made by Aggression.

The final game, as well as this demo, works with STe, MegaSTe, ADSpeed 16
and Falcon 030. It requires 1 Mb.

I guarantee that this demo will blow your socks off when you see it!

Hi does any one know any thing about this file on tu-clausthal.de

arj992.tos sym-link arj.exe (dos) full kompatible

Is this a full ARJ archiver for the Atari....??

Also can some one fix there Gopher server so people can get files,
.TOS files are being listed as TEXT.....???

I find that this is a very BIG problem with Gopher servers
every were, to me a big wast of time, if you are going to have Gopher
support, Please do it correctly... Thanks....

Kabold Help...

I have found a feature with MAXIfile, but can Kabold do the same thing...??

MAXIfile has a Copy files option, that will Auto select files
that will fit the destination, good for copying files to floppy, it will select
the files that fit...

How does Kabold replace the TOS Copy/Move/Format and delete, is this a TSR
patch, not mentioned in the Demo and addverts...

Source record: 179495

>What would a 20 meg atari sh204 be? RLL like a megafile30?
>Shouldn't this be in the faq? (not when I looked at my old
>hard copy)

The SH204 is an Atari ACSI-to-SCSI host adaptor (one SCSI device only, no parity bit), an Adaptec 4000A SCSI-to-MFM controller (one or two MFM devices) and either a Seagate ST225 or Tandon 262 drive (20 MB MFM, the Seagate being 5,25" and the Tandon 3,5").

Funny enough, this oldest of all Atari hard drives is the only one that works on the Falcon030: Just remove the host adaptor.
Furthermore, one can remove the Adaptec and the drive and replace with a plain SCSI drive.
And last but not least, one can add a second MFM drive (driver with LUN support needed).

bye, Peter

Heh, I still got my original System disk from my first Atari.
It's got TOS 0.9 something, mushrooms instead of bombs, and nice Norwegian
text. I doubt he is interested in that one - you get to see the bombs a lot :-)
(Not to mention that the Norwegian text could be confusing - although I
remember that some of it wasn't even translated, it appeared in German....)
It won't run on any of my current '030 machines, but I am planning on
getting one of the original (small) 520's if I can locate a cheap one.

DC Right is probably available on atari.archive.umich.edu with full docs.
My guess is that it affects the right mouse button in some way (perhaps
making it act as a non-instant left button, or perhaps a single click on
right equals a double click on the left).

Start Selector is an alternate file selector (the dialog which pops up
whenever a program wants you to select a file). The one that comes with TOS
on versions earlier than 1.4 pretty much suck, and even the later ones
don't have a lot of bells and whistles. Try Selectric and Universal Item
Selector 3 to see some really good file selectors. UIS3 is an absolutely
must-have for me. The nice thing about having a fancy file selector is that
virtually any program will give you access to it, so you can format disks,
move/copy/rename files, create folders, etc. etc without having to go back
to the desktop.

Source record: 179453

The biggest problem with starting up yet another Atari newsgroup is the proliferation of cross posts - forced by our shared common peripherals and software. Before trying to start a new newsgroup- think about the extra messages that will innundate both groups because of our very common coupling.

I record many messages - with eitheran .st or a .fal ending. The ones that are truly .fal are pretty darn limited. .st still outruns it by about 11:1 by my count fromast month's collection.n.

When the RFD comes out, you'll get my NO vote. Wayne

>line.

The real point of a "software" modem isn't to beat the price of current modems but to give you something that has more expandability than current modems - you simply change the software on the next purchase instead of also changing the hardware. SO they up the speed, the software modem can do that in seconds. So they add a new encoding method, again, seconds to change in software with no hardware change. They develop a new "product" which still uses phone line interface (just like Fax was once new). No problem - a small software change and you are there already - again, no new hardware.

This is the essence of the software modem. Where does it fail - when the speeds become so fast that only hardware can do the job. That software is just too slow.

How about adding ISDN access over either a B or D channel to a software modem (although here the phone interface may have changed slightly - seems to me more lines run from the box for our ISDN phones.) - or maybe you provide packet switching over ISDN on the software modem - there all you would need is te software modem with appropriate software (in fact, you don't need the A/D hardware.)

Modems becoming so cheap may be what's holding up the acceptance of ISDN (but guess that is a bit off topic here.) Sorry for the digression. Wayne

Worked fine for me on a MegaSTE. I am using Gulam as a command shell from
which to run it. Perhaps you should try a shell (though I'm not sure why
that would matter)?

FM> net.
Hmmm, what hard disk software you using? The reason I ask is that I have a Floptical drive and use the ICD Pro 6.55 software. When I format the Floptical disks the software asks me if i want to format them in Atari format or Compatible format, I would assume that it would be something similar for the Syquest drives.

I have a problem with the GNU G++ compiler. I can compile C++ files without problems, but when it comes to linking it doesn't work. The strange thing is that I can compile the files from GNU-Shell with exactly the same setup!

I have the g++.olb and try to compile with the option -lg++.olb with no success. C-files can be compiled and linked without problems.

Any suggestions of what might be wrong is appriciated...

Christer.

Yup. I'm up to date on all the code versions.

Well, I'm pleased to say that at this very moment I'm connected via
SLIP on my ST to the internet using TIA on the host.

It's taken all night (I was up all night :) to get the thing working
properly, mostly caused by having to hack modm0dev.c and the network
files in /etc. At this time, telnet works perfectly. However, I'm
having some problems with ftp. I've already downloaded the vanilla BSD
source for it and used it instead of the ftp-03 in the net.tools
archive. It's still a bit flaky, but better than the original.
I reckon part of the problem may be data overruns in modm0dev. I
can think of a few optimisations on that code, so there's hope...

>What are the pitfalls?
>I can't see any pitfalls yet.

Well, lack of documentation on the MiNTNET resolver doesn't help...
I've only now got it figured out so I can type "telnet src.doc.ic.ac.uk"
and get MiNTNET to query the ip address from TIA.

I've also had some mysterious crashes of MiNT where the syslogd exits
with signal 15 for no apparent reason. Sometimes it exits when I
do an "ls -l" of /usr/etc, which is where syslogd is located. <boggle>

Cheers, Steve

448. Re: Are there any DSP Modems?

Newsgroup: comp.sys.atari.st

Doesn't DSP modem refer to the thing that plugs into the Falcon and uses
the DSP chip as a modem rather than the normal external hardware modem?

449. St-Guide

I see virtually every package I download lately has both ST-Guide HYPErtext _and_ normal ASCII text files in them, increasing filesizes by a fair bit, and giving very little extra advantage to those using a decent text-viewer (e.g. Guck/Revenge/Masterbrowse). Since it looks like I'm going to end up having little choice. Where do I get the _latest_ _English_ version of the ST-Guide viewer? (I don't need the utilities for it & the assorted other garbage, just the ACC viewer....)

While I'm at it same thing for 1st-Guide (The text/picture viewer & sample-player). What is the latest english version (if available), and where do I get it....

Down with frilly extras! :)

I will have you know they are more than 120,000 Falcons by now world
wide. How do I know???

Because I am a dealer who keeps in touch with these figures.
There are new products continously being offered.

In my opinion, the Falcon is being supported quite nicely and I for one
are pleased with the hardware and software support and hope that all
other users will feel the same!

Even on Unix boxes - 80 columns tend to be the standard - and its the
standard on Ataris. As this is an Atari conference - suggesting that
anything other than 80 columns is acceptable seems very strange.

>``like'' Gribnif, the UK ``like'' HiSoft, and the rest of the
>world likes the German products mainly (and that is because they're
>generally actually good).

Bit removed...

>Atari and MultiTasking are a hype. When it comes to doing serious
>work most people reboot and run plain TOS anyway. So why not admit
>this and save loadsa bucks, quid or whatever you use to pay for your
>software?

I could not aggree more so.....

Also Gribnif gives great support for updates, mainly on GEnie, the German's
don't realy offer that kind of support, and most of there programs only
run in Mono..

The other problem is the UK agents don't have the rights to do the upgrades,
they have to be sent to Germany, and as Germany does not support Credit
Cards it can be a great pain...

The other problem that I have found that most German software houses have
droped English versions of there software, yes I have been caught with 3 pieces
of software that no longer has English support...

I have yet to see updates for UK/German software posted here on the net,
but I have for US software....

NOTE: I did managed to get my Auto Overscan here updated with a help from
a German and Swedish friend..

Many many thanks for their help...

The UK updated version 3.0zm is in Overscans mail box, (BBS) and COMPO
were no help at all, stated that there was no later Enlish version,
or they did not have it, do you call this support, Overscan go and find
a better agent, one that works for you, not againsed you....

455. Neodesk 3/4

Newsgroup: comp.sys.atari.st
Date: 1994-10-09 01:06:23 UTC
From: wells_s@kosmos.wcc.govt.nz
Message-ID: <377fmf$jtn@golem.wcc.govt.nz>
Source record: 179484

Well, after extensive testing, I've decided to stop using Neodesk 4 until Gribnif fixes it's problems, and if not done soon-ish, I'll be getting a refund as for what I do, it's unusably buggy. For now, v3.04 works very well though. (Being used with Geneva). Here's what results I came up with:

All done on a 2-meg STE with a 30meg SCSI-drive with only 16K cache.

Neodesk 3 + Geneva takes 15 seconds to load, and ends up with approx' 1026K / 1027K available. (1027K total, 1026K is the largest free-block.) Memory is fragmented into 3 blocks. ~1K lost due to fragmentation.

Neodesk 4 + Geneva takes 24 seconds to load, and ends up with approx' 790K / 856K available. (856K total, 790K is the largest free-block.) Memory is fragmented into 3 blocks. ~66K lost due to fragmentation.

Neodesk 4 + Geneva takes up ~170K more memory than Neodesk 3 + Geneva. Actual increase is ~236K due to fragmentation.

Memory after running & exiting Icon-Editor: (Neodesk 4)

# of times total RAM available RAM (Kb) fragments RAM lost (K)

1 856 408 5 382
2 856 221 8 569
3 879 229 9 561
4 863 221 12 569
5 856 230 13 560

After running the Neodesk 3 icon editor five times, there were no changes in RAM usage or fragmentation. Icon-Editor initialisation time was on average 3 seconds faster. (Using exact same icon-files).

Neodesk 4 took 4 minutes 23 seconds to do a partition-to-partition copy of 315 files, 21 folders from E: partition to D: partition. (5577K). And then took 26 seconds to delete them all.

Neodesk 3 took 4 minutes, 17 seconds to copy them, and 43 seconds to delete them.

The GEM desktop took 3 minutes, 51 seconds to copy them, and 22 seconds to delete them.

Kobold took 35 seconds to copy them.

Everything was set-up as close to eachother as possible. (All had verify on, memory limitations set to nil, run in single-tasking mode etc.)

Hmmm... I wonder how fast Kobold would be with verify turned _off_! :)

Hopefully the problems can be fixed. Neodesk 4 doesn't like copying large amounts of files to/from floppies... It tends to crash (Neodesk v3.04 doesn't). Memory fragmentation... Speed....

It'd be the first program I've ever returned due to dis-satisfaction.

I've got no complaints about the Neodesk v3.04/Geneva v1.02 combination though. It's brilliant!

I wont doubt your claim, but I for one am happy with the support
I get for my Falcon. Since at least 1987, Ive been relying on
net support for any computers I own: finding people, getting new
software, and the like. There is a serious lack of dealers for Atari
in my area (northern NJ, USA), but I have the new Toad catalogue, amongst
other advertisements, and if something doesnt exist as freeware/shareware,
chances are that I can get what I need from Toad.

Weve all learned to deal with the seeming lack of support that Atari
gives its computers, but if you just sit about and bitch about it,
well, no matter how hard you look, you wont find it. If someone doesnt
like the support that exists, rather than complain, DO something about
it. I just got several new exciting peices of software for my Falcon,
all gotten off the net. With the unfortunate geography, its sometimes
hard for USA users to register European software, but people like
Wolfgang Wander of Connect, they set up a way to allow USA residents
to register without costly currency exchange and postage... (this
is a subtle HINT! especially to the authors of Shangai!)

I am selling all of my Atari STE stuff. I will take the best offer for all listed items. Please E-mail offers to DSSJMS@aol.com or call (614) 235-8809.
I have the following:

HARDWARE
Atari Mega STE with 4 meg ram, 210 meg, 11ms hard drive, NEC 15" multisync monitor, keyboard and mouse, Toadswitch resolution switch

A/B printer switch with cable

Black & Red hi res Beetlemouse

SOFTWARE
Multitos
NVDI
SpeedoGDOS
Diamondback
X-Boot 3
Codekeys
TBX Cad
Superbase Personal
Atariworks
Calligrapher 3 Gold with extra fonts

GAMES
Defender of the Crown
Tenth Frame (bowling)
AD&D Heroes of the Lance
The Pawn
Phantasie 1
Phantasie 2
Phantasie 3

All manuals included. Exact shipping charged.

Thanks!

David S. Smith

>though. It's brilliant!

I fully agree with you Steven, but I droped NEODESK 4 after 2 days, its a dog,
I could not recommend it to any one, the memory fragmentation is very very bad
with using NEODESK 4 on it own, and it looks like they stuffed up the icon
editor...

That boot up message get on my nerves, if they ever fix it I will remove that
message.....

All this with NO TSR's or ACC's, come on Gribnif what went wrong, I don't like
NEODESK 4 at all, far far to cluttered, features that are not needed, buttons
to small, far to slow, (16mhz cpu) I don't need help on every thing, there is
a Help button on every thing you select, this is going to far...

I can recommend NEODESK 3, 100%, but not NEODESK 4, unless I wish to lose
a few friends....

462. Shareware Developers - Read This!

Newsgroup: comp.sys.atari.st
Date: 1994-10-09 04:58:12 UTC
From: frank@theshack.demon.co.uk
Message-ID: <941009Z045812.932frank@theshack.demon.co.uk>
Source record: 179533

Hi Everyone,

This post is mainly aimed at Shareware Developers, but I'd like to hear anyone's opinions:
I'm currently researching an article about the piracy of Shareware programs: Cracked keys, Key generation programs, illegal distribution of registered packages etc. This isn't a crusade - I'm not asking for people to "name names" - I'm just looking for background information. I'd like to hear from:

a) Shareware programmers who have had their work compromised by pirates distributing cracked versions etc.
b) Shareware programmers who haven't as far as they know suffered from this, but who may be concerned about it.
c) Users who have either come into contact with this, or have strong opinions (either way) about this subject.

As I say, anyone's opinion is welcome, and replies can be posted here, or via email if anyone has anything private to discuss. If anyone has anything pertaining to this subject in their posession, I'd love you to email me (anonymously or otherwise, all replies treated with strict confidence) about it.

Cheers,
Frank.

Try to format with partitions each smaller than 32 MB. This should work
with most harddisk drivers (AHDI, HDDRIVER, HuSHI...). With the appropriate
formatter (SCSI-Tool), you can even partition the cartridge on the Atari.

It was none other than Daniel D that wrote on 3 Oct 94 that ,

DD> floppy. It's that when you go to save the first place it looks is
DD> drive a: and
DD> if you don't have a floppy in there the game hangs permenently (at
DD> least on the
DD> falcon).

on the ST aswell ...also interesting feature is instant hangup if you press the
TAB key .

```
IT>I have a 1040ST (1986 vintage) that no longer works. The power light doesn'
IT>come on. I don't know a
IT>lot about hardware, but I did pull out the Power Supply board and found that
IT>its getting 125 volts, the
IT>switch is OK, and so is the fuse. So much for the things I can fix. I then
IT>checked the 6 wires coming off
IT>the board: 2 red 5 Volts, 1 blue 12 Volt, and 3 black (I guess these are th
IT>grounds?). I found that there
IT>is no voltage across any of these, e.g., red to black, blue to black. I thi
IT>this is a bad sign!

It doesn't get much worse, true.

IT>Can anyone tell me if I tested this correctly?

Yep, that's right.

IT>Can anyone tell me where I can find a Power Supply?

Call Toad Computers in Maryland, or Megabyte Computers in Hurst, TX,
whichever is closer to you. Expect to pay about $70 for a new power
supply, plus shipping.

470. German ST, convert ???

Newsgroup: comp.sys.atari.st
Date: 1994-10-09 08:15:10 UTC
From: Captain_Blade@pplnet.com
Message-ID: <026497KKIIBEAQRMXNSS@pplnet.com>
Source record: 179493

IK>My friend has been offered a German ST really cheap. Is it possible to run
IK>in English by running Neodesk, or some other desktop replacement over the
IK>German TOS ?

IK>What about the keyboard ? Does it have German-specific keys, and if so, can
IK>they be reconfigured ?

The various alert boxes will still pop up in German. You migth consider
a TOS upgrade (to 2.06) as a real imporvement - at roughly the same
price as Neodesk, you'd get the English TOS and a much-impeoved desktop
as well.

The keyboard has several German-specific keys, but I think they'll come
up with different characters in English TOS. I'm not real sure about
that one. They can be remapped with software, though.

1 Technical info

My email address will change more than once nexttime. Due to this reason I have an alias, pointing to my actual location - and if it's in the MAUS net: G.Castan@physik.uni-stuttgart.de

For easy location of this document at servers and mailboxes, I ask for using the following name(s) and saving the ascii AND TeX versions:
FILENAME=
gdosi22e
gdosinf22e (when using UNIX) CR+LF should be used when saving at UNIX-Fileservers too, not just LF

2 Introduction

Actually I'm writing a program, that makes his print-out via GDOS. Looking for printer drivers I faced the problem, that many times no documentation is included to the drivers.

Otherwise it may happen that there are different drivers with the same name.

Here I have briefly collected my experiences with printer drivers.

This collection doesn't generally want to describe coders how to use printer drivers (except to problems not mentioned in literature). And you wont find information about the concept or how to install printer drivers. To get this refer to the list at the end of this FAQ.

What I want to exclaim here is more information about the several drivers:

o Where are the drivers available?
o How to distinguish them?
o What are the problem with them?
o Which drivers can be used for certain printers?

If anybody has more experience or questions, please write me. I will face the work to update this FAQ.

Gerd Castan.

3 Motivation

With GDOS it took me ~2 hours of coding, to get the screen output to the printer in maximum quality. And (almost) with no extra work I get output to printers I even don't know.

Whoever wants to write a program with printing options should better take care of the main job of the programm.

Nobody wants to pay for printer drivers if there's another program that didn't take the coder extra work with such stuff making this program less expensive (and surely better).

The user has - besides the lower price - another advantage. If he uses several programs he needs place for the driver and the fonts only one time on the HD.

SpeedoGDOS is available from Atari shops (Atari Competence Center in Germany) now.

The (qualified) feedback to my FAQ has - compared to autumn '92 - raised remarkable. Due to Speedo the coder's interest in GDOS seems to be bigger.

4 Changes

Beginning with release 2.0 I mark the changes in the contents list above.

'+' means a new chapter/info and a
'*' stands for changed chapters
This chapter will only be used if I have to mention something about the changes S. Damerau of course. Blame me, not Gerd ;-)

Gerd has one note about the changes: He hopes to have included all changes noted, but isn't sure because he got a
big list of spelling errors in German
2.1 and tried to include the changes
there.

5 VDI drivers

In this table I have listed distributor, errors and useable fonts.

5.1 Ink printers

PAINTJET	14.08.92	60173	I				SP, OTL
PAINTJET	13.10.91	45934	WT				SP

Note: The drivers named HP_LJET and DESKJET can be used for (HP compatible) ink and laser printers. The difference is in the transfer to the printer: Packed (p.) or not packed (n.p.). 'Delta' means that the data is delta packed.

PAINTJET:
180X180: 2-8 colo(u)rs
90x90: 16 colo(u)rs

MT90 is made by Patrick Dubbrow.

Ink drivers produce a problem with bitmap fonts. Using 300dpi everything is ok. But 360dpi fonts are optimised for best efforts with pin printers with thick pins. Together with ink printers the fonts look much too thin.

Solution: either use 300 [600, 1200 :-)] or exclusively use vector fonts

5.2 9pin drivers

_SLM_HS____	17.01.94_	_63663_	_ROM_________	___	_n_	________	LS,_SPD_____

SLM_HS is a SLM driver for the Falcon (when using the Heatseeker interface)

5.6 Screen drivers

The screen is (if VDI functions are used) seen as an output device just like printer, plotter etc. That's why fonts for the screen can be installed in ASSIGN.SYS just like for printers.

Usually this isn't noticed because the drivers are in ROM. But they can be replaced like printer drivers.

Note: For system fonts only (like the original ones) non proportional fonts with a 8*8 or 8*16 matrix can be used. That's limited by the AES not VDI.

With newer AES (from 4.0?) it's no problem to use fonts of free choice (Variable AE_FONTID and AE_FONTSIZE in GEM.CNF, see [15]). Coders should make sure their programs can take that. (even like scrollbars of free width)

Bitmap fonts not assigned for screen driver 1 are not available for other screen drivers.

5.6.1 LineA

The so-called LineA routines are subprograms of the screen drivers of the ST series. Take them as undocumented. This is the hardware depending part of these drivers.

The attentive readers discovers it: Exchanging the drivers removes the LinaA routines too. This happened with the TT for example.

So never use them!

/Reading/ acces can be taken to the LinaA variables. But I can see no reason for it.?

5.6.2 Setscreen & Getscreen

These XBIOS-Functions (mostly Setscreen) should'nt be used.

But what am I talking. For those useing them or those being tortured because someone did it:

The video hardware of 1040STE and Mega STE has a hardware bug. When defining a new physbase with Setscreen (and if it's the same that is returned by Getscreen), it may happen that the screen is 'folded'. This happens if a register is set at an arbitrary moment. But this is only allowed only at special phases of the screen output.

What has to be done?

Users: The programs NVDI and FALT_OFF stop this error. Or give this FAQ to coder.

Coders: Either even don't use Setscreen.
If you use it though: If physbase isn't changed, the value returned by Getscreen may not be used. Use the value -1 as physbase instead!

5.6.3 NVDI and WARP 9

There are two frequent replacements of the ROM drivers: NVDI and WARP 9 (earlier QuickST). TurboST was distributed by BELA but isn't updated any more.

Once you use them, you will never want to miss them: the Desktop seems to be terribly slow. I never want to work without NVDI on my Atari. Others say the same about WARP 9.

NVDI uses strongly optimised drivers for the ST and TT resolutions. Infortunately I don't know which drivers are replaced by WARP 9.

NVDI is available from Behne & Behne and contains not only the drivers but a GDOS and a manual describing exactly all VDI calls.

WARP 9 is available from CodeHead.

Due to this NVDI is spread in Germany and WARP 9 in the US

Different to NVDI WARP 9 only speeds up the text output. Grafics stay slow as before. AND the newest version doesn't work with MultiTOS. It Works on the Falcon too, but I don't know if it supports *all* resolutions there (Like with Screenblaster, BlowUp030 or others)

T_OFFICE			wt			98/196dpi	SPD
IMG-0300			Reschke,wt	n			LS

IMG-0300 can be copied (non commercial). The other IMG-0??? drivers are by SciLab. ZEBRA is for the Zebra Labelprinter.

5.7.1 Memory drivers

A memory driver doesn't do anything else than a screen driver (see [15] and [13]). But the output isn't written to the screen memory, but to another memory.

The usual v_openwk binding doesn't have all necessary parameters to open this driver. If not included to the language this binding must be written by yourself. A listing is found at [15].

The memory driver listed above is only capable of b/w output only and has a logical resolution of 300dpi. The (matrix) drivers tested by me have no problems with fonts installed that are for other other drivers. The memory driver should take screen fonts although it has a logical resolution of 300 dpi.

The aspect ratio (relation of pixel width to height) which usually is not equal to the screen resolution can cause the problem that circles are displayed as ellipses.

With NVDI V2.5 or higher the GDOS output can be made to offscreen bitmaps and copied in the screen windows.

5.7.2 Plotter drivers

A HPGL driver seems to be distributed with the program DATA. On PD disk ST 458 (German PD series) is one too. If I get more about it I'll include this info here.

5.8 What's missing

I don't know drivers using the abilities of the following printers:

o Canon BJC 600 - A colour printer with 4 heads (CMYK) 64 nozzles each.
In the colour mode it's compatible to:
- Canon BJC 800
- Epson LQ 2550/2500
Its resolution is 360x360. I dont's know any GDOS driver
supporting the BJC's capabilities directly (or via
compatibility mode) when using colours.

6 Errors

Errors in the printers drivers - that I know - are the following:

1 These drivers display fonts with the attribute 'light'
2 Doesn't work on TT
3 The EXTENDED ENQUIRE FUNCTION (VDI 102, vq_extnd) doesn't give back the parameters as listed in the German 'Profibuch' (Jankowski, Rabich, Reschke - Sybex)
4 Using the attributes 'italic' and 'outlined' the letters of bitmap fonts are cut off on the right side. This error appears independent from other attributes being used.

This error was in the Libraries of the driver sources from Atari and
seems to be included in all drivers except to NVDI and SpeedoGDOS.

If theres nothing written about an error I don't know if this error appears
or not.

It's no accident, that Xact only uses the attributes 'fat', 'italic'
and 'underlined'. (See [4])

Another reason against using 'outlined' is the following:
If you make a driver calculate an outlined font from a normal one it gets
'wider' by two pixels. Due to the reason that a pixel has a width depen-
ding to the resolution (other than a fitted font) a text gets different
widthes in each resolution. But who wants to have different textformat on
different printers? The only way to stop this is letterspacing -
typographic 'bullshit'.

7 Fonts

First: What's the difference between a font and a face (German: Schnitt)?

When calling a font selector there may be Swiss 721, Swiss 721 italic,
Swiss 721 Bold and Swiss 721 Bold Italic. These are 4 faces, alltogether
form a font.

This separation isn't that simple at bitmap fonts, due to all attributes are
created from only one file (this can be made with vector fonts too, but it's
quite nonsens In my opinion). That's why I first didn't note that this
attribute creation is buggy in some versions of SpeedoGDOS (see 13.3.3).

I don't always distinguish between font and face in this FAQ.
Especially in the chapter about font formats.

7.1 Bitmap fonts

The fonts used are bitmap fonts in the DR standard format. They have to be
saved in Intel format. Motorola format isn't supported by any GDOS.
(See [1] and appendix)

GDOS bitmap fonts have their width information defined in both, screen font
and printer fonts. Unfortunately the designers were a bit too zealous and
fitted the width of the sreen fonts to make them look very beautiful.
They've done a good job, but they're not similar to the printer fonts and
don't allow WYSIWYG.

There are many fonts on the Internet only for the screen and maybe useable
for one printer. Everybody using these fonts should know that he can't print
documents in an acceptable quality via GDOS.

But in the Atari and former BELA package there are containedthe fonts for
all printer drivers in this package (the 360*360dpi fonts are missing in the
Atari package). If you have a useable program you can print every document
with every driver.

7.2 Vectorfonts

Vector fonts don't use pixels, they are created with algorithms - supported by shapes and hints. These algorithms (see METAFONT for a good example) make the fonts copyrighted like usual programs. (See [21] for this)

7.2.1 FSM-GDOS Fonts

The vector fonts with the old FSM-GDOS format are named with OTL.

These fonts and drivers shouldn't be used any more and are listed to only for completion of this FAQ.

7.2.2 Bitstream Speedo fonts

The vector fonts in speedo format are named with SPD.

They are supported by all SpeedoGDOS releases and by NVDI 3.0 or higher.

7.2.3 Type 1 fonts

Type 1 fonts are available for MacIntosh abd MS-DOS/Windows. They only have differences in the internal representation, not in the information.

At least one of these formats is supported by SpeedoGDOS from V5.0a. But I already found some that SpeedoGDOS 5.0a can't display.

7.2.4 TrueType fonts

This format is available for MacIntosh and MS-DOS/Windows too. The MS-DOS format is a superset of the MacIntosh format.

SpeedoGDOS from V5.0a can handle both, no matter if it's for MacIntosh or MS-DOS/Windows.

NVDI from V3.0 will be able to handle it too.

7.3 Comparison of vector formats

(This chapter is to be completed yet)

There's no noncommercial program on any platform that can convert one format into the other. A lot of fonts are only available in one format.

But what makes a conversion so difficult? To ask different: Which informations are stored in which way?

7.3.1 Curves

First the shape of the chars should be saved. But that for many ways are used:
Type 1: Uses cubic Bezier curves
TrueType: Uses square B-splines
Speedo: Uses Bezier curves

(Does anyone know, which order is used by Speedo? Does Speedo 5.0 use several orders? How has v_bez_qual to be set to make an output with v_getoutline and v_bez_fill have the same result as the font engine?)

Square B-splines are much faster than cubic Bezier curves but you need about 4 times as much points.

7.3.2 Hints

The next problem is the display on media with low resolution. For a neutral observer Speedo fonts always look quite good on the screen (well, some fonts are ugly by nature).

But I've found TrueType fonts that look as ugly as nothing else on the screen. For example the two vertical lines of an 'n' are not the same, one is 1 pixel and the other is 2 pixels thick.

The way to prevent those errors are hints. This method is used by Speedo, Type 1 and TrueType (but not by Type 3 and CFN). But the possibility to store hints in a format doesn't mean that they're used!

So, finally: All these three font types can look very good on the screen, Type 3 and CFN can't [ever tried to print CFNs on a printer with less than 360x360dpi?]

7.3.3 Internal resolution

After the problem with low resolution now there's the problem with the high resolution. Even if you think there shouldn't be any; there are!

To display a vector font first an internal system of coordinates has to be selected. CFN has one from 0 to 16000, Type 1 (which was created when there were no high-res printers) one from 0 to 1000. Due to this there are 'corners' visible at large letters or high resolutions (in the professional league). CFN can make the big deal here.

(Which internal resolutions do Speedo, TrueType and OTL have?)

7.3.4 Linear and optical scaling

Do we now have - with the description of the shape, a high internal resolution and the hints - a scalable font? Sure not!

A font that is designed for 16pt has a totally different shape as a doubled 8pt fonts (see Knuth: The METAFONT book; Kopka: LaTeX etc.). A well designed font isn't scalable.

In large fonts vertical lines are much thicker than the empty space between them. But this information for optical scaling can be saved in a font too.

So a font, being 20 pixels high on the screen (this is usually a large font) should look different to one being 20 pixels high on a laser printer (this is a small font that should have small vertical lines).

(Which formats do save these informations?
to COMPO and 2B:
If it's saved in Speedo, Type 1 or TrueType: How can I tell SpeedoGDOS or NVDI that a printout has to be downsized in a photomechanical way and has to be scaled different to a font that don't have to be changed?
Does this make it useful for programs setting the font size in pixels and

points too? If this is the case: which has to to set first?)

There are rumours about Type1 fonts supporting optical scaling automaitcally. But I think this should be supported by the font engine because there may be one window with a title and one with an enlarged document. Here scaling has to be made different - with same size in pixels. The font and the font engine CAN'T know this.

8 Printer

Producer	Printer	Drivers Fitting
NEC	P6+,P7+, NECP... P60,P70	NB15_(FX:_:,:NX1000)_
HP	LaserJet_II	HP_LJET
HP	DeskJet,_LaserJet_III,IV	DESKJET_(HP_LJET)
CANON	BJ10E	BJ10
CANON	LBP_4/8	CANONLBP,_LBP
Mannesmann-Tally	MT_90	MT90

Drivers in brackets work but don't use the ability of the printer totally. This means - for 24pin printers - that these are used in 9pin mode. At HP compatible laser and ink printers this means that the data isn't packed although this is supported by the printers.

Some deskjet drivers are told to make problems. In this case try the laser-jet driver. The printing takes longer then (due to more data) but the problems should be solved then.

The BJ10 drivers use the Proprinter emulation. Don't use the BJ10 in the epson mode!

The Stylus shouldn't be used with 24needle drivers. The needles overlap (the ink dots of the stylus don't) and so the drivers just don't print some dots.

The meaning of compatible usually is defined by the producers of the compatible printers.

Notes:

o If you don't find your printer in the list and you know a fitting driver, please write me a note.
o Try other drivers even if you have found one fitting to your printer.
o Of course the FontGDOS drivers have a lot of problems with the memory. But the speed of'em is faster than the other (Speedo not considered).

8.1 Market overview

In the German TOS-Magazin July '92 page 24 contains a list.
If You know about lists available europe-/worldwide inform me.

9 Programs

Nowadays it's obvious (but not usual) to use GDOS in every program.

The following list is limited to those using GDOS to print too.

```
_____________________________________________________________________________

```

This list is no commercial. I'll include every program I get to know.
(Comment by the Translator: Sorry for mentioning Atari Works three times,
but I wanted to keep the 'Text/DTP' and 'Spreadsheet' Chapters')

Notes:

o Programs listed in the Speedo column with 'y*' support Speedo but don't
output text.
o 7up only uses non proportional fonts (e.g. Monospace 821 from Speedo)
o Xact can print Speedo fonts without SpeedoGDOS too.
o FSM-GDOS is included in the Wordflair II package.
o Platon only outputs metafiles via GDOS.
o I didn't make it to print via GDOS in OPUS.
(I've been told, OPUS doesn't chose the fonts it can handle with,
and doesn't print if even one of these fonts is installed. See 7.1 too)
o Programs only printing via device 21 (like OPUS and CLA are out! (see
16.2 too)

Kandinsky Version 1.73
ftp.cs.tu-berlin.de pub/atari/Graphic/kand173

10 Utiliies

10.1 fontfix

Problem: The font height is wrong in some fonts. fontfix discovers this
error and corrects it.

On the Internet fontfix can be found here:

ftp.uni-muenster.de /pub/atari/Applications/Dtp/Fonts/Gdos

ftp.cs.tu-berlin.de /pub/atari/utils

10.2 Outline Fonts

Outline Fonts Accessory by CJG

This utility edits the EXTEND.SYS for SpeedoGDOS. This file
contains a description of the size of the Speedo caches, the
fonts and the font sizes. The caches can be saved to disc and loaded
again from there too.

A good done program except to the preset cache sizes fitted to
FSM-GDOS not Speedo.

Filename: OUTLINE.PRG alias OUTLINE.ACC, 67644 Bytes (49254 Bytes Speedo 5)

Spread with SpeedoGDOS.

(Why doesn't Atari make it to make programs including a display of the
version?)

10.3 Printer driver

GDOS Devices Accessory by CJG

Edits the ASSIGN.SYS

Filename: DRIVERS.PRG alias DRIVERS.ACC, 64878 Bytes (41592Bytes with
Speedo 5)

Before starting this program it's better to create a backup of the
ASSIGN.SYS!
The (at least) two reasons are the following:

1. The informations about the bitmap fonts are removed without comment.
2. ASSIGN.SYS is replaced by a new one if 'Benutzereigen'-'Hinzufuegen' (in
the German release) is selected wihtout any chance to get it back.
(The English Version should have a Dialog like 'Own drivers' 'Add' or
similar). To all coders: Don't copy that style!

If this utility should display no drivers sometimes simply start ASSIGN.PRG
(see next subsection)

DRIVERS.PRG/ACC only displays the Speedo drivers of my collection. It
doesn't display the Filename, it displays a name included as string in
the driver. Does anybody know how it gets this information?

10.4 ASSIGN

ASSIGN 1.0a is by Dirk Sabiwalsky (PD).

It tests three things:

o Are there several fonts using the same ID and have different Names
(Typefaces)?
o Are there several fonts using the same ID and the same Pixelheight?
o Are there several fonts with the same name (Typeface) and different
IDs?

10.5 FONTCHK

FONTCHK tests GDOS fonts if they have possible errors.

It's spread with ProList for example.

10.6 FONTCNV

Converts GDOS fonts from Motorola to Intel format.

Comes with ProList too.

10.7 GEMFont

Fonteditor has the capability to read Signum- and PK (TeX)- Fonts too.

Internet: ftp.tu-clausthal.de:pub/atari/systools/gdos/gemfo120.lzh
Use the chance to get a new unlzh or lhxarc.

10.8 FontMonger

Converter and editor for different vector formats including Speedo. Only
works on IBMs or MAC though.

10.9 Font-ID

Font-ID is a little freeware tool made by Frank Schneider. In a window it
displays the fonts (in different sizes) installed with GDOS or SpeedoGDOS
including the Font-ID. So you can get an overview when you don't have a
program with font selector/ID display function at the moment.

10.10 X4U

Speedo fonts have much more glyphs than the ones mapped in the ASCII
charset. With this program by Peter Hellinger you can setup, which char is
to be used at which ASCII code. It's distributed by R.O.M.

11 Font selectors

We all know this useful thing about file selectors:
The Operating system doesn't only offer a file selector, it's got an
interface to use one file selector in every application.

A standard interface for FONT selectors doesn't exist, usually they're
offering their jobs by cookies. The work to make a program support font
selectors via cookies is much smaller than writing one for yourself.
If there wouldn't ... but let's take a look at the candidates first.

11.1 UFSL

UFSL from Michael Thaenitz is freeware and may distributed with any
application. The last version is 0.97 from April 30th 1994.

Fonts (faces) and size can be selected comfartable. But after typing
a free size I didn't get a face displayed at this size.

Attributs are missing and the dialoge is only modal.

UFSL unfortunately isn't in development any more.

11.2 XUFSL

I only know two things about this selector: It's existing and told to be ugly.

11.3 Magic from Peter Hellinger

This selector is part of Magic 4.00 from Peter Hellinger and not available separately. Magic itself - NOT MagiC! the multitasking OS - can be copied freely. But the information how to use it must be paid.

It's nice that this selector can be a non modal window dialog, FlyDial or normal dialog. Scrolling through the list is fast, too.

But the long loading time (proportional or non proportional faces can be shown and each face has to be checked about this. An application can't switch off this checking) isn't that nice. One more bad thing is the jump to the beginning of the list after alternating non/proportional faces.

Attributes aren't selectable and the size selection in the edit line isn't acceptable the way it's done.

The selector only can be used when the event handling is completely done by Magic, what makes the coder use a fixed code structure (working parts must be rewritten, other things don't work anymore) and produces new errors.

The actual release only shows Speedo faces, not Type1 or TrueType.

I'm desperately waiting for an update ...

11.4 FontSel

FontSel Version 1.00 from May, 11th 1994 from Holger Weets is totally cmpatible to UFSL for the programs. Its small size and the selecteable attributes are a very nice feature.

Together with Speedo 5.0a it only shows the System Font.

11.5 Minimum requirements

A font selector should work with all OS-releases (TOS, MiNT, MultiTOS, MagiC!, Geneva), with every video hardware supported by the VDI and should show each font available from every GDOS version. (Pixel fonts, Speedo fonts, Type1 and TrueType).

11.6 Desirable properties

Its quite complicated to make the user set further characteristics of fonts in an extra dialog. So, at least the standard attributes (bold, outlined, ...) should be directly made available. If a program doesn't support them they should be made non selectable/invisible.

The same holds for the skew angle.

Not every program can handle all fonts. According to this every program must be able to set, which faces have to be invisible or disabled.
An example:
Some programs (like 7up) only use non proportional fonts.
A further feature (but not exlusively, due to BASIC) it should be possible to pass a procedure variable to the selector setting the kind of displaying for each face.

It would be nice if the program could set the selector in a window or normal dialog too. It can be done much easier and more flexible than in Magic.
The font selector opens a window in the calling program's name and gives back the window handle to it. The application further handles the events and if one is for the font selector's window it is passed to it via a procedure call. This simple mechanism enables the use of multiple (system wide) selectors, colour pickers (and more) distributed by different producers in windows at the same time.

Once more:
This parallel work only is possible when every selector doesn't use it's own evnt_multi loop.

Finally an application should be able to set if it doesn't matter if a font is proportional or not (the user can have displayed it if he really wants to). When this information isn't used the call of a selector can happen much faster!

My favourite selector actually is the one of papyrus, but it only works in papyrus (yet?) [Stefan says: It's my favourite too ;-)]

12 Distribution

12.1 Atari

The drivers named with Atari are availabel from Atari. Send three disks, Money for shipping and a kind letter to them and you'll get them with printer drivers and fonts.

This Package is available at Atari shops too.

No docs but for this price ...
(That's the way in Germany - other countrys may differ!)

12.2 BELA

The fonts named BELA were available from BELA

There were two disks with packed printer drivers and fonts for them.

The fonts DO have the same IDs like the ones from Atari, but the internal font NAME is different. Due to this these fonts are correctly not accepted by some programs if used with Atari fonts.

There's almost no documentation. Not even a hint about the one owning the copyright for the drivers or about the author(s)

One last thing about BELA: R.I.P. ;-)

12.3 Language

The driver named Language is spread on the language disc of the MegSTE

12.4 Internet

The drivers signed with 'I' are to be found on the Internet.
For example: ftp.cs.tu-berlin.de

12.5 Working Title

The WT drivers are spread with Calligrapher. They are (c)Working Title, the
wt driver are licensed by Working Title.

No drivers are on the Calligrapher DEMO disc. The drivers coming with
Calligrapher lite (15DM) are signed with CL in the tables.

Screen fonts are on both discs.

12.6 XWindow System

There are PD Speedo fonts from Bitstream. These can be used with Speedo 4.2.
I (Gerd) have no problem using them (even the umlauts are correct)

To find them let Archie (see 11.12 FTP) search as follows:
set search sub
prog speedo-

The fonts:
font0648.spd -bitstream-charter-medium-r-normal--0-0-0-0-p-0-iso8859-1
font0649.spd -bitstream-charter-medium-i-normal--0-0-0-0-p-0-iso8859-1
font0709.spd -bitstream-charter-bold-r-normal--0-0-0-0-p-0-iso8859-1
font0710.spd -bitstream-charter-bold-i-normal--0-0-0-0-p-0-iso8859-1
font0419.spd -bitstream-courier-medium-r-normal--0-0-0-0-m-0-iso8859-1
font0582.spd -bitstream-courier-medium-i-normal--0-0-0-0-m-0-iso8859-1
font0583.spd -bitstream-courier-bold-r-normal--0-0-0-0-m-0-iso8859-1
font0611.spd -bitstream-courier-bold-i-normal--0-0-0-0-m-0-iso8859-1

12.7 COMPO

COMPO offers two Bitstream Speedo packets with 100 fonts each. One costs
DM99.-
(At your own risk)

Since some time COMPO also offers a CD-ROM with TrueType and Type1 fonts/faces.
These seem to be the same ones as on the StarType CD, but TrueType and Type1
on a single CD-ROM.
The price is DM99.-

12.8 IMG-0300

On the Internet:

ftp.uni-muenster.de /pub/atari/Gdos

12.9 Others

I don't make a choice of drivers. The limit is all of them. The authors (and
users) of the programs are asked now to write me, which GDOS drivers come
with the programs (With information of: lenght, date and known bugs).

11.10 FTP

Many students can get software worldwide via ftp. Prices for steady
connections are constant, but connections between America and Europe
have to be paid depending to the volume of data transferred.

Please try not to ftp across the big blue and use short ways.
Use transferring times not in the working hours at the server!
('9 to 5')

Files with known names can be found by Archie.

In Germany:
telnet archie.th-darmstadt.de
login: archie
help

In the US e.g.:
archie.ans.net

Archie will automatically display other archies. use the one that's closest
to you.

The Archie databases ask about once each month one ftp server after the
other for freely available files

One more small hint: atari.archive.umich.edu ist always totally busy. Not
even mirroring to other servers helps.
Better connect to
- amiga.archive.umich.edu
- msdos.archive.umich.edu
and type cd atari from there.
This computers have the same HD mounted. BUT: First search your own vicinity!

12.11 SciLab

SciLab's GDOS drivers are not mentioned in the driver's tables though they
are very favourite - specially the colour drivers.

These drivers no langer can be ordered without a program. This is due to the
programs that lots of programs have when using the colour drivers. SciLab
would be blamed then.

You only can get these drivers by ordering a program from SciLab or making
the distributor (of the software you use) licensing those drivers. SciLab
always has 'an open ear' for that. Those are especially the Speedo capable
drivers for HP 600dpi and HP 500C/550C. Actually these are distributed with
Speedo 5 too.

12.12 Star Division

Star Division sells two CD-ROMs (StarType) with 500 TrueType/Type1 faces.
These are mostly complete typeface families.
One example:
Zapf Humanist 601 is available as:

o roman
o italic
o bold
o bold italic
o demi

o demi italic
o ultra
o ultra italic

A lot of Bitstream fonts are included. (e.g. Zapf Humanist 601 as noted above) There are two ITC faces too. In Germany these two CDs are (at least) available for DM69.- from Vobis. A booklet with a short overview is available there too.

13 GDOS versions

13.1 The ones from the bones

Atari-GDOS, AMCGDOS, ABCGDOS, NVDI and possibly G+Plus use the same drivers.

13.1.1 Atari-GDOS and AMCGDOS

The Atari-GDOS is the ancestor of each GDOS. Its most remarkable properties are lots of bugs and it's horrible slow speed. But that's history.

AMCGDOS is faster and has less bugs. But it almost has the same capabilities and was distributed together with Atari-GDOS.

13.1.2 ABCGDOS

Comes from The Netherlands (I think so) and is almost totally unknown. I only mentioned it because it's a GDOS.

13.1.3 G+Plus

Does anyone know anything about it?

13.2 One step forward

Even though there was a very good GDOS in NVDI, Atari had an open ear to the request of users and coders and tried to raise the capabilities of GDOS.

13.2.1 FontGDOS 2.0

This is a GDOS still using bitmap fonts. It uses own drivers.

The drivers from this package are really much faster than the former ones. (Only bitmap fonts and graphics are comparable of course)

I didn't have any problem using these with other GDOS versions but you must limit to the old fonts.

FontGDOS is the successor of the Atari GDOS. Mainly it differs with the Bezier function and faster (and color-able) drivers. It's got nothing to do with FSM-GDOS or SpeedoGDOS.

FontGDOS is availabel from several firms which use it for their programs.

13.2.2 FSMGDOS 3.0

During the development of FontGDOS, Atari created a GDOS that can handle vector fonts (named OTL in this FAQ). So FSMGDOS isn't a successor of FontGDOS.

It was developed the same time. FSMGOS practically was ready to be released
but due to massive protest by the developers it was cancelled in the last
moment. Except to bundles it never has been distributed officially.

13.3 Actual developments

13.3.1 SpeedoGDOS 4.0 and 4.1

Contents:

o Installation program
o Speedo font engine
o 2 Programs to edit ASSIGN.SYS and EXTEND.SYS
o 14 fonts in Speedo-format by Bitstream
The Falcon Speedo (in Germany) comes with 18 fonts now
o 14 Printer drivers
o An installation manual [Stef: hmmm, manual? Gerd: _installation_ manual!]

Outrageous features are:

o Speed
o Not the whole Font-file has to be read (memory saving)
o 16bit fonts (no 256 character limit)

See [4]

The information if it's a Speedo or bitmap font can be found in byte 33 of
the Fontname (vqt_name, INQUIRE FACE NAME AND INDEX, VDI 130). Zero means
bitmap font and one means FSM- or Speedo font.

Some Problems are inportant to be mentioned:

A coder can't find out if a driver can handle Speedo fonts (see last
question in 10.3)

Some font IDs are used by bitmap AND Speedo fonts, though different fonts
with similar IDs may never be installed the same time.

If you don't take care of this you'll get bombs.

It depends to the user to install the right drivers and fonts. The coder
can't help here to stop errors.

The best way is only to install bitmap fonts with the right drivers or to
use a Speedo only system.

The monospace font coming with SpeedoGDOS 4.0 has no umlauts (ae, oe, ue ...)

For installation and coding I recommend to read [5-7].
Remember starting NVDI before SpeedoGDOS in the AUTO folder!

The ones that bought Speedo in the early days got 4.0, the Falcon buyers
got 4.1.

13.3.2 Speedo 4.2

Let's see what Ulli Ramps has to say:

Huhu! [TM]

The following is a list of changes made to SpeedoGDOS.

1) Line-A - Due to many requests from developers, SpeedoGDOS is now no longer Line-A dependent. All output is done through VDI calls. This was done to make Speedo compatible with various graphics cards, and to make it more multi-tasking-friendly. In addition, users should be able to use various VDI replacements with GDOS.

Another benefit from removing the Line-A dependency is that we no longer have to worry about the scratch buffer used for algorithmic special effects. We have implemented the special effects inside of SpeedoGDOS and the drivers, so that the user/program does not have to worry about the memory needed to accomodate arbitrary sized characters. Unfortunately, this means that old drivers need to be relinked with the new independent library (found in the new driver kit).

There are plusses and minuses of the new implementation of special effects. In many cases, the special effects will be slower. With all previous incarnations of GDOS, you could not use 'bolding' or 'skewing' at non-90 degree rotations; now both of these work at all rotations. On the other hand, 'lightening' used to work at all angles and combinations of effects; now 'bold' mixed with 'lighten' only work at 90 degree rotation angles.

Miscellaneous Note - When using special effects, many applications have a hard time placing the cursor. In both the v_gtext() call and the v_ftext() call, the only cursor compensation to be made is for bolding. Bolding adds the thicken value to the number of pixels of each character. For rotated characters, note that the extra pixels can be considered a vector along the positive x-axis which is rotated at the same angle as the text and added to the advance vector; therefore, the length of the text string should remain the same at any angle. This is true even when SpeedoGDOS generates characters on a scanline basis (when the character does not fit in the character cache), although it does not implement the special effects. Also, applications should watch for the case when they keep track of the cursor position with vqt_advance() or vqt_width(), instead of vqt_extent() or vqt_f_extent(). In versions prior to 4.2, the application could accurately place the cursor by adding two pixels for every outline character and by adding left and right skew offsets for a skewed string. Now these effects are generated by the outline font engine, so the application must either rely on the extent calls or it must inquire for the advance vectors for characters that are skewed and/or outlined separately. For compatibility purposes, it is recommended that the version number of SpeedoGDOS is checked so that programs can handle both old and new characteristics.

2) Font ID's - Speedo font id's have been promoted to a higher range of ID numbers. This was introduced to avoid conflicts with bitmap

fonts and more importantly, with the system font (which conflicted with a variation of Swiss 721). For those applications which use the usual interface with Speedo (i.e. use vqt_name() to find out what the font ID's are), there should be no problem, except if documents have font ID's embedded into formatting information. Of course, all the user has to do is substitute the font. If the application actually goes into the font file header to read the ID, note that we are adding 5000(decimal) to all Speedo font ID's.

3) Printer Driver Incompatibilities - Speedo will now check the printer driver it is trying to load for the '_FSM_HDR' cookie embedded in the driver header information. If GDOS does not find the cookie, it will not allow the loading of any fonts; therefore, you can still use your driver for non-text applications. For future reference, please be sure that the driver header begins on a word boundary for all drivers to be used with this version and any future versions of GDOS.

4) Vst_load_fonts() - We have made two optimizations to the loading of fonts. The first is when a load_font call is made, GDOS checks the date of the extend.sys file to see if it was modified since the last load. A reload used to be mandatory because a bigger scratch buffer might have been required. Since we no longer need a scratch buffer, GDOS only checks to see if a change has been made to the list.

The second change is that GDOS no longer deallocates the global list of fonts if there are no more workstations using GDOS fonts. Therefore, application launches will be faster. On the other hand, the miscellaneous cache never gets cleared of font header information, unless a reboot happens.

5) Memory.sys - The memory driver used to mistakenly open a printer handle.

6) vst_height() - Vst_height used to have a bug in which a maximum point size is reached and then the size begins to shrink. This is fixed.

7) Postscript table - The Postscript table has been fixed (i.e. the indexes were off by 32 for certain Postscript files).

8) Fixed vrt_copyfm() in the drivers.

9) When in 'bicsmode', character 0 was not passed through to the font engine.

10) Negative point and set sizes - The handling of negative point and set sizes has been made consistent with the original handling in FSMGDOS.

11) The handling of fractional setsizes was incorrect in the drivers, and is now fixed.

12) V_ftext() in the drivers can now handle the offsets passed into the ptsin array.

13) Screen drivers can now safely load as device 10.

14) The memory driver can be loaded residently.

15) vqt_devinfo() - Vqt_devinfo() now returns information, whether or not the device has been opened. Furthermore, the device drivers name, found in the driver header, is copied into the ptsout array; the name is 26 bytes long. Note: if the driver is not SpeedoGDOS-compatible, a null string is returned, and if there is an error, a -1 is returned in ptsout[1].

16) vst_width() - A new call has been added to Speedo. The call is similar to vst_height() except that it sets the width. The bindings are identical except that the opcode is 231. Note: As with vst_arbpt() and vst_setsize(), you must call the general call (i.e. vst_arbpt() or vst_height()) before using the width calls (i.e. vst_setsize() and vst_width()). In addition, the general calls always reset the widths.

Miscellaneous Note: Although these have been published before, many requests have come in for the SpeedoGDOS error codes. Here they are:
Code 1 Out of memory
2 File open
3 File read
4 File write
5 Speedo engine error
6 Character too large (not used, defaults to line output)
7 No room for scratch buffer
8 Character cache error
255 Miscellaneous
These errors are placed in the error code address that applications should provide. Note that if you have MultiTOS installed, GDOS will report the error to Salert, the system alert box. A revision of the error handling is overdue, since some of the errors are no longer relevant (e.g. code 6), and error code 5 is returned for the lack of availability for pair and track kerning (in addition to the serious errors).

Well, again a big thank you to Ulli!

Now it's me again:

The Installation program for Speedo 4.2 had a small bug yet. If a NEC P printer is selected, NEC_P.SYS ist written into ASSIGN.SYS. But the distributed driver hat NECP.SYS as filename. R.O.M. fixed that.

13.3.3 Speedo 5.0

SpeedoGDOS 5.0 was developed by COMPO/no!software using the sources of Atari. Unlike Speedo 4.x it can scale TrueType and Type 1 (see 7.2). Price: DM129.-
(at your own risc)

Now 9 printer drivers are included - the additional ones. Speedo 5.0 is an upgrade, so you have the old drivers. But: Which are the old divers? The ones before Speedo 4.1 don't work (and only falcon users have 4.1; the ones who bought Speedo from COMPO in the beginning only got 4.0)

So I at once printed a text using Speedo 5.0, NECP.SYS (Speedo 4.2) and ProList. And? Surprise! It works. That's really astounding because ProList and my own program (see 2) had problems with this driver and Speedo 4.2.

Using the drivers of Speedo 4.0 at least shouldn't work due to the changed jobs of Speedo 4.2 and the drivers.
(Could anyone test Speedo 4.1 drivers with Speedo 5.0? I don't quite believe that this works)

Here's how I think an upgrade works (be careful satire)

==========
User: Dear Mr. Compo [...] but my Speedo 4.0 drivers don't work any more.

COMPO: ... best wishes to your decision ... BUT: Speedo 4.2 isn't an official release. It's especially made for papyrus and not useful for other programs. On the other hand...though...seen from a different point...maybe...possibly...Finally you need the drivers from Speedo 4.2. But we don't distribute them. Ask R.O.M. about it ...

[later]

USER: Dear Mr. R.O.M., ...I'd like to get a downgrade, free of course.

R.O.M.: ...don't work...our own costs...bla...etc...better wait for NVDI 3.0, we certainly can put you on the list.

User: "$&"$/(!&!^#
==========

Well, *I'm* full of anticipation how users that only had Speedo 4.0 will be able to make printouts.

Versions of Speedo 5.0 until now:

5.0a (Aug. 3rd 1994)
First release

5.0b (Aug. 8th 1994)
From now T1 & TT font loading works faster.

Known Bug: After calling vqt_headerinfo() the files arent' closed again. If a Program makes this call with all fonts it can run out of filehandles (the amount of them differs from one TOS release to another).

Since Speedo 4.2 the 'outlined' attribute only works in special conditions. It depends on the font used, the SpeedoGDOS version, the point size ... and which Mantra's are mumbled at full moon.

5.0c (Aug. ? 1994)

Now LOWMEM=0 works as stated in the manual.

13.3.4 NVDI up to V2.51

These releases consist of very fast screen drivers and a very fast GDOS. Compared to Atari-GDOS, NVDI had almost no bugs. Nevertheless the functions were allmost the same.

13.3.5 NVDI 3.0

This will be able to scale Speedo and TrueType fonts and will contain printer drivers.

13.4 Comments

Users and coders should be happy with the speed of development. Even the numbers of font formats included simultaneous doesn't have anything comparable on any other platform.

The time between the releases of SpeedoGDOS 5.0a to 5.0c - obviously without extended betatesting - doesn't satisfy a lot but, on the other hand it's nice to see that the competition by NVDI 3.0 makes the developers hurry.

SpeedoGDOS 5.0 creates problems in some applications that worked perfectly with Speedo 4.x. This may be due to the negative handles that 5.0 uses for the new formats. That's not a bug, because one shouldn't calculate with handles. But some apps do it though.

Will SpeedoGDOS 5.0 or NVDI 3.0 be supported by the programs first? With NVDI yet a good coding manual was distributed and I think V3.0 will continue this tradition. COMPO and Atari - on the other hand - make a big secret of how to use their GDOS - when you're not an registered developer (paying a lot of money). Me, as a normal consumer, I have SpeedoGDOS for more than 3 weeks (while I write this), registered developers don't have it yet ... I will support the GDOS at first for which I have a documentation first. Other coders will make it this way, too - without being malicious. And the users will buy that GDOS that's supported by their programs [right said Stefan]. For me it's great to see, that competition revives the marked and I am full of anticipation to see, which documentation comes first.

14 Source

For officia developers it's possible to get an almost complete printer driver in object code. This has to be adapted to the special printer.

This package is available for GDOS and SpeedoGDOS.

15 Tips'n tricks for users

15.1 Pixel trash at printing

Printing graphics on a NEC P6+ (maybe other printers too) including a lot of black in a line I often had the problem that one line was left out (Speedo-drivers NB15, NECP) or two lines were printed displaced in one line (Speedo-drivers FX80, NX1000).

This happens when printing directly and via CENSPEED. When VARSPOOL is used this effect vanishes.

VARSPOOL can be found on the driver disk of the NEC-printers.

15.2 NEC P6+

Once in a while a NEC P6+ will get noisy (rrrrrrrrrrraattatatattaa).
If you open the front you'll see a round bar (about 1cm thick).
Put two drops of sewing machine oil on it each year (you'll get it from Mom)

15.3 Overwritten Speedo faces

Sometimes SpeedoGDOS writes in face files. This produces interesting effects. To fix this I have a second order besides GEMSYS filled with the Speedo faces on my harddisk. If I get strange effects again I copy these files to the GEMSYS folder. The fixes it in most cases.

16 Tips'n tricks for coders

16.1 Font size and pixel size

Here are my experiences with GDOS and WYSIWYG. Credits to Ulrich Rossgoderer for confirming these.

It's about the output of vector graphics and text on screen and printer.

The size of text is defined in point and is always the same - independent of the resolution of the output device.

Different are vector graphics: they have to be recalculated in pixels before the output. This should be no problem. If you are opening a virtual/physical workstation you get the pixel size in micrometers in devParm[3] and devParm[4].

Let's assume the vector graphic is saved internally in micrometers, then the definition points at the output simply have to be divided by devParm[3] or devParm[4] to get the position in pixels. When doing the output in windows an offset has to be added. but thats not relevant here.

This is the theory which is quite simple so far (see [3]).
Let's start with the practice.

As described above we output a text and a border which is saved internally as vector graphics. It doesn't matter here if the text is a Speedo or bitmap font. To have a better chance to compare the border exactly surrounds the text.

I got the following experiences: When the text exactly is filling the border on the screen (ST-high) it is - when printed - much too small compared to the border.

An error in the recalculation of the pixelsize can't be the problem, because I made the printing with the drivers NB15, NECP, FX80, NX1000 and the results are the same.

I have only one explanation for this: The screen driver supposes a different resolution for the pixel size than for the font size.

Two solutions I can offer:

First you can use another pixel size on the screen than the one given from the operating system. After opening the virtual workstation (and ONLY this one!) I calculated
devParm[3] := 282
devParm[4] := 282
and with this parameter I made the recalculation from micrometers in pixels. Now the relation from graphic to text on screen and print-out is exactly the same. But now a DIN A4 page doesn't fit on the screen in it's width. The numbers are found by me the experimental way and possibly can be optimised

Another solution may be this: Use a smaller font size for the screen (and ONLY there!) by multiplicating the size with about 72/96. This is simple with Speedo fonts because the size in points can be defined with a very high accuracy. With bitmap fonts this won't work because a screen font in the 72/96 fold size for every printer font doesn't.

This method surely is to be midified for ST-Mid and other resolutions.

From Wilfried Behne (Half NVDI ...): SpeedoGDOS ignores the devParm[3] and [4] - values of the screen drivers. The values of physical workstations ARE taken.

16.2 Selecting drivers

During th test of several GDOS programs I found out, that some coders have the following problems:

Users can freely assign drivers in the ASSIGN.SYS.
There may be a setup like

23 FX80.SYS
27 NECP.SYS
28 NB15.SYS
31 META.SYS
61 MEMORY.SYS

How may a coder find out which drivers are installed (and ready)? Even though there's no Printer 21?
Quite easy: When the program supports printers ALL drivers from 21 to 30 have to be opened and closed again at once. An installed driver gives back a devicehandle >0 when it is opened. vf_devinfo only gives back correct values when a driver is open.

Do the same thing with drivers 61 to 70 when MEMORY drivers are supported.

The ASSIGN.SYS as printed above is very useful. That's because the NEC P printers support all these drivers and print in different resolutions.

17 Addresses

(Lot's of stuff is available from the friendly Atari dealer 'around the
corner ;-/)

(Note: All addresses are German ones - except when marked!)

18 Miscellaneous

18.1 Critics

18.1.1 Critics to the author

Critics is welcome. To get more info, send email to:

G.Castan@physik.uni-stuttgart.de

If you are writing me you have ossibly already tested two or three drivers.
Please write me if the errors listed above occured or not.

Anybody who knows different driver support addresses, please drop me an
email.

18.1.2 Critics to the translator

Hi, this is Stefan writing :-)
The reason why I wrote this translation I can't find in my head ...
Guess it's because Atarians should work together and support each other!
Well, if you wonder about some errors of spelling or syntax remind this:
I learnt English at school for 4 years an after that I kept my knowledge
actual by playing some text adventures and now by reading cs.atari.st and
cs.st.tech and some of the ANet groups
If you find some errors in this translation, please don't send them to Gerd
but
to me:

cookie@cookie.syd.de

Referring to the feedback on this translation there seems to be ANY error in
it.
I didn't get too much email now - and no postcard, so I'll set my address
here too: Stefan Damerau
Bergholm 31
D-24857 Fahrdorf

It would be interesting to me, WHO is happy with this FAQ, so send me
postcards,
discs, books, whatever you want - no mail bombs please ;-)))

Thank You and have fun and lot's of experience with this FAQ.

Bye
Stefan

18.2 Praise

If this FAQ helped you out of a problem, please write me a postcard in your
next holidays.

Postcards I received yet: 1

18.3 For my support

Due to actual experiences I ask the distributors to switch on verify when
copying update disks.

I only know two distributors not making any problem with this.

Does one of the readers want to code a Speedo font editor? We (Gerd &
Stefan) offer our time to beta test it ;-)

18.4 Trademarks

This document is full of trademarks that mustn't be used freely.

18.5 Guarantee

I'll offer no guarantee.

KW>My friend has been offered a German ST really cheap. Is it possible to
KW>run it in English by running Neodesk, or some other desktop replacement
KW>over the German TOS ?

Sure. Better is to exchange the TOS-ROMS ;-)))

KW>What about the keyboard ? Does it have German-specific keys, and if
KW>so, can they be reconfigured ?

Yes, it does and yes, they can be reconfigured with a software patch.
In case of using English TOS-ROMS (or EPROMS ;-), it is no more necessary!
Otherwise I recommend a patch and exchanging the keyboard, too...

>where do I get it....

You can get the latest english version from micros.hensa.ac.uk but I
am not sure which directory. There is an advantage to using ST-Guide
documents, even with a good text-file viewer. ST-Guide is for online
documentation. Text file viewers are general purpose utilities for
any type of text you might need to look at... You would not want to
read an entire manual in HyperText, because you would quickly get lost
in the links (if you are a curious soul like me). By the same token,
though, you would not want to look for a specific piece of information
in a text-only document, since it can be a pain-staking process. In
this case, you want the information yesterday, not tomorrow.

> a 50 way one, no good at all...

Mac drives can use one of several types of SCSI connectors (though the "Mac" end of the cable that is included is always a DB-25). The Link/Link2 use a Centronics-style 50pin connector (looks a lot like the funny end of a printer cable). This type of connector seems to have found favor in the industry, so many vendors are using it on the actual drives units, and supply an adaptor cable for Mac use. That way, they can use the same external case for Mac, PC, various UNIX boxes, etc.

So, this is definitely a valid question for a prospective hard drive buyer who wants to use a Link. A Centronics-style connector on the drive will prevent the need to buy an adaptor cable (which are quite expensive, suspiciously enough :-).

Zoo has two modes, normal and idiot (my labels :-). I usually use the
idiot mode, unless I am using a shell like TwoinOne. Anyway, try
"zoo -extract fname".

483. TOS upgrade help

Newsgroup: comp.sys.atari.st
Date: 1994-10-09 15:19:47 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <3791mj$ffj@mailer.fsu.edu>
Source record: 179506

I want to upgrade a 520STFM from TOS 1.0 to TOS 1.2. Currently, the six chip TOS 1.0 set is installed. The 1.2 set I have is a two chip set. BTW, I am well aware of the pros and cons of the various TOS versions, and I have a good reason for wanting 1.2 precisely, not 1.4, 2.06, etc. :-)

Anyway, I have been told by several folks that my 520STFM motherboard should have some "solder jumpers" that I can set in some way to inform it about the two chip set verses the 6 chip set. My problem is, I cannot find them! I seem to have a relatively common 520STFM motherboard (memory chips under the keyboard area, TOS sockets in upper left corner). I have been told that the jumpers I a looking for are marked "A16/A17 and CE", but I cannot find anything like that on my motherboard.

So, I need to know how to find these solder jumpers, and what I need to do to them so I can use a two chip TOS set. A diagram or description of parts that are near these pads would be ideal, as well as which pads need to be connected for this to happen. I'd be happy to pay mailing fees if someone has a diagram they can Xerox and send me.

I am assuming that these are just empty solder pads, and one "jumpers" them by running a bead of solder between them. Is this assumption incorrect? Maybe that is why I cannot find them :-). Any help would be greatly appreciated.

Please email me directly. I'll post a summary and put instructions on atari.archive.umich.edu. Thanks in advance.

Oh, if anyone has a six chip TOS 1.2 (US version only) set, and would like to sell them, I'd be interested in that as well.

: Because I am a dealer who keeps in touch with these figures.
: There are new products continously being offered.

: In my opinion, the Falcon is being supported quite nicely and I for one
: are pleased with the hardware and software support and hope that all
: other users will feel the same!

A whole 120,000, eh? Why would a developer write programs for such a
small niche market? You'd have to get the vast majority of owners
to buy the product just to stay in the black, much less make a profit.

Are there really any new titles? Where do you buy them? I haven't
seen an Atari computer for sale in NYC in years (nor software).

This isn't really a flame, just an honest couple of questions from
a former Atari owner.

Chris

P.S. I actually wish I'd kept my ST for use as a dumb terminal.
Uniterm is still the nicest terminal emulator I have seen.

DC Right switched the functions of the Left/Right mouse buttons (i think, or
was that DC Lefty?) and Start Selector is a replacement file selector from the
old STart Magazine, adds stuff like drive selectors... not as good as some,
but better than the standard pre 1.6 tos selectors!

Hope that helps - Andy

Atari (as in our Atari) make both computers and consoles - The other company,
Atari Games, make arcades.
Confused?
Well, you'll be even more so when you hear that Atari Games (the arcade people)
have signalled an interest in using the Atari (the computer/console people)
Jaguar in their future arcades!!

Source record: 179518

Hi,

Yes, it is possible to use an english desktop on a german ST, but system informations will be shown in german. But it is possible to read out an english TOS and run it at the other ST. Which ST is it? An older one like 520 ST or a newer one? Perhaps somebody in a computershop can help you? You can also use MultiTos (I guess it is english in England? (I'm from Germany ;-))). In my home-mailbox there's also a program to read TOS2.05 out of a MSTe and start it at 1040STe.
There are special keys on a german keyboard (ï¿½ï¿½ï¿½á□□ï¿½) but you should not mind them. All keys you need are on the keyboard.
If nothing's ok for you, you can also change your TOS-ROMs. Then you'll have a normal, english ST.
But it's not too bad to use a german ST. The programs are in English so only very few notices will be shown in German.

Just because it's written in GFA?

So it doesn't run on a Falcon properly or under multitasking systems but it's a good piece of comms s/w for a plain ST user like me.

Different s/w for different environments, if you want to use comms on a Falcon or under m/t sofware then you can get Connect.

> And mostly used by teenagers....

In this case you're right (I'm 19) but I can't understand how you can go around making stupid assumptions like that. Well I can, it's because you're Roger Sheppard.

> Try using FDT on a Vax....

No I use it for dialling into bulletin boards and a good job it does too.

499. For Sale: Atari Mega ST4 (Midi SW)

Newsgroup: comp.sys.atari.st
Date: 1994-10-09 20:00:43 UTC
From: thamer@ndl.com
Message-ID: <CxF8x7.90u@ndl.com>
Source record: 179437
Cross-posted to: comp.sys.atari.st,rec.music.synth

For Sale: Atari Mega ST4 Computer System

Hardware includes:
- Atari SM124 Color Monitor
- 48 Mb external Hard Drive
- 3.5" internal Floppy Drive
- 4 Mb ram

Original Boxed Software includes:
- Dr. T's Omega II Midi Composition System
- SynthView Patch Librarian/Editor
- TimeWorks Data Manager
- 1st Word Atari Word Processor

Loads of Public Domain SW including:
- Archivers/Compressors
- GNU compiler and utils
- Image viewers
- Terminal Communications programs (XYZ Modem, Kermit)
- Games, etc.

This system is in very good condition and comes loaded with the above
software. The built-in MIDI ports and Dr. T's software make it an excellent
low-cost music computer.

Will sell to best offer.

>Thanks!

>I think this was discussed a long time ago on this group . . .

The earliest version of TOS that supported 1.44mb drives was 2.05,
released with the first MSTes. 2.06 and up support 1.44mb (I dont know
if the TT 3.05 supported them either, as it seems that Atari did
some weird version changes)

However, there is a nasty way to get 1.44mb from a 720k drive, all
it requires is a hardware hack to divide the clock of the floppy
in half, but then your stuck at 1.44 forever, unless you install
a switch between the divider

> from the auto folder on the floppy. Can anyone tell me how to get
> it to run on the hard drive of a TT?

I wouldn't run from the hard disk of my MSTE either. I've only tried it off floppy on the TT.

I heard it was due to disk caches. Apparently it is very unstable if you are using ICD software with the cache turned on. Apparently turning the cache off solves it.

:-)

The problem I noticed was that Elite II doesn't seem to be *any* faster on the TT than it is on the MSTE :-(

Roland.

>Yes! Falcon is not ST or TT - It's a quite different machine and
>it sure deserves it's own Newsgroup.
>Please give info when the group is reality :-) I'll join it right away!

No, no, no... There we go again.... I think ALL atari users should stick together. Right now there are far too much atari ST/STE/TT owners left in the cold. Most of the new software that is brought out is made so it can run on older AND newer machines. When Falcon owners think they are so special that they need a special group they will only dig atari's grave a bit deeper, and because of that, more and more ST users will abandon their machine by lack of support. By comparison of price there will be very few ST owners upgrading to Falcon's, most of them will buy PC's. There is hardly any commercial software available specially made for the Falcon, and in the future this will be even less I'm afraid.
If the atari scene can be thought of as one big family and people would be active enough, maybe there will be some support from the 'big' companies, if it is split up, the marketing space will be too small to be profitable.
So please don't turn Falcon users into some sort of 'superior' beings.
As a happy TT owner I don't see the Falcon as an 'upgrade', and certainly not as 'quite a different machine'.

The Falcon is an Atari, so it belongs into the 'standard' Atari areas, period.

>and you are there already - again, no new hardware.
>
>This is the essence of the software modem. Where does it fail -
>when the speeds become so fast that only hardware can do the job.
>That software is just too slow.

As the newer modems use even two (custom made) DSP's, the Falcon's single DSP could never compete.. Even so, as you change the software of a modem (if it is a DSP or stand alone) it needs approval again.... So it's just not profitable, second to this, when you design a stand alone modem, ALL computer users can benefit from it not just Atari Falcon owners....

509. Shareware and Piracy : Please reply...

Newsgroup: comp.sys.atari.st
Date: 1994-10-09 22:55:12 UTC
From: frank@theshack.demon.co.uk
Message-ID: <941009Z225512.800frank@theshack.demon.co.uk>
Source record: 179419

Hi,

I'm currently researching an article for the January Issue of ST Format magazine about Piracy in the Shareware Market (cracked keys for shareware programs, key generators, that sort of thing), and I'm contacting you as you've released shareware applications in the past. I'd be extremely grateful if you could take a few minutes of your time to give me some sort of answer, however brief, to the following questions.

Please email all answers to frank@theshack.demon.co.uk as soon as possible. Thanks!

1) Have you ever registered a shareware program?
2) Have you ever continued to use a shareware program without registering it? If so, why? Were you worried about not receiving anything in return? Were you worried about sending money to a foreign country?
3) If you answered YES to #1, roughly how many programs have you registered?
4) Have you ever been offered a cracked shareware program?
5) Have you ever been offered a textfile or program which allowed you to register a program in your own name?
6) Would you ever use a cracked shareware program?
7) Do you think the future of the Atari computers lies in the commercial market, or in the shareware market?
8) Would you rather see shareware released as full versions, with the onus on the user to be honest, or crippled versions where you're forced to register?

Please feel free to add *any* other comments, and thanks for your time.

Frank Charlton,
ST Format Magazine.

> the hard drive of a TT?

:) Turn off your write/read/verify caches and then give it a bash. Frontier will work with a _moderate_ amount of caching (define moderate, I ask you..) but if you push it too much then blop. :(

Copy/Move/Format are GEM-shell functions. You have to use a GEM-shell that
supports Kobold (e.g. Ease or Gemini), unless you're using MultiTOS.

> What's a TT owner to do?

I cannot help with the editor bomb (perhaps it is a TT thing), but the
baud rate thing should be solvable using the Xcontrol serial.cpx and
HSMODA04. Basically, you can use serial.cpx to tell programs to use a
particular serial port other than Modem1 (which many assume to be the
only one). Then, you can use HSMODA04 to map a faster speed to one that
you don't use, for example mapping 57600 to 1200 baud. Then, if you select
1200 baud in FDT, you will really be getting 57600 through the magic of
HSMODA04. I have never tried this later part, as my favorite comm program
directly supports multiple fast serial ports (CoNnect), but it should be
doable. I did manage to get Flash 1.6 to use Modem2 and Serial2 while I
was testing them on my MegaSTE, using serial.cpx. Good luck.

>: You definitely need an RTS/CTS fix if you've got TOS 1.2
>: Regards...Julian
>: julian@loose.apana.org.au
>--
> julian@loose.apana.org.au
>

??? Are you sure you meant TOS 1.2? I've used a USR Sportster 14.4 modem with my ST (1040STfm, TOS 1.2) at 14.4k without a hitch, and I don't use any type of patch program for RTS/CTS.

I've always been under the impression that TOS 1.2 was one of the (few) TOS versions that handled RTS/CTS flow control properly...am I mistaken?

Yes. There is a real ST emulator in progress. In the german maus.atari.soft
group was an announcement for it.
The first version will only support software that runs properly under Mag!X/
Mag!C (Software free of BIOS/XBIOS routines or so).
It seems that it will be released until the end of the year.

I'm sorry but I disagree, I've been using a 16MHz system for well over a year now, but I must confess life without NVDI would be hell. The Eagle Sonic Board isn't _that_ expensive for the more dedicated user should their needs amount to that.

But I would like to do a small vote... who here uses their Falcon WITHOUT a 32MHz board? (This isn't a 'are you happy with it running this way' but a test to see if you _are_ running with this system).

: machine. I still use my ST and am frustrated by its lack of power, and cannot

yes but my point was that people wanting to buy now, should be made aware
of the pitfalls of the Falcon (ie needing all those 'little extras').
But on the other hand you can still buy a Falcon for a LOT less than I
paid for it back in the spring of 1993.

My second post said that you can buy a 4meg, no HD for 450 uk pounds.
You have to admit that's a much more reasonable price than before. The
message in the original post was to make sure you know what you are
buying if you purchase this Christmas because there are more hidden
extras to the Falcon that you'll need than you could possibly imagine.

In article <378q3u$psj@lastactionhero.rs.itd.umich.edu>, jchung@umich.edu (John T. Chung) says:
>
>Hey fellas, I downloaded the file zoo21.ttp from archive.umich.edu
>"x <filename>"
>

It sounds (reads ;-)) like you are trying to enter the parameters via the dialog box that comes up when you double click the .TTP file from the desktop - I also had this problem.

The answer is to use the program via a Command Line Interpreter (ala MSDOS) or, better still, try to obtain the program ZOOBOY.PRG which provides a front-end shell to run ZOO under.

Another alternative shell (which can act as the front end for a number of archivers e.g. STZIP, LHARC, ARC, ZOO, I believe) is called TWO-IN-ONE. The filename that this usually appears under I cannot recall but presumably would be something like TWO.PRG/2IN1.PRG/etc.

Hope this helps .... Steve

Me. The performance gains with 32MHz boards seems to be almost negligable.
Until you increase the bus speed, and allow "TT" RAM, speeding up the
CPU makes little difference.

Installing an FPU made a BIG difference to selected programs (eg POVray).

2B are not adding anything to MagiC3. It was always me who did the
main things in MagiC. MagiC 3 will have 3D-Look (optional!!),
Iconification, drag&drop, a lot of MiNT-functions and loadable device
drivers and file systems and background floppy and harddisk access.
And some more other things.

From: blade01@pplnet.com
Message-ID: <14365FOYVYCXBVYRAPC@pplnet.com>
Source record: 179428

IF>I'm currently researching an article about the piracy of Shareware
IF>programs: Cracked keys, Key generation programs, illegal distribution of
IF>registered packages etc. This isn't a crusade - I'm not asking for
IF>people to "name names" - I'm just looking for background information.
IF>I'd like to hear from:

IF>a) Shareware programmers who have had their work compromised by pirates
IF>distributing cracked versions etc.
IF>b) Shareware programmers who haven't as far as they know suffered from
IF>this, but who may be concerned about it.
IF>c) Users who have either come into contact with this, or have strong
IF>opinions (either way) about this subject.

Probably the msot famous is the "Elite" key for Freeze Dried Terminal.
Sicne the author of the software collected several hundred (thousand?)
dollars in registrations and never distributed the keys, this is the
ONLY justified piracy I can think of. And it's still illegal, if young
Mr. Hopkins is sill enough to try to press his suit.

As a shareware author, I have yet to receive any registrations - even
for the post card wares. I have received a couple of unrelated
donations (notably from Ron Pothier out in California), but no one seems
to think my products are worth money. No problem - I'll develop them to
suit myself, and everyone else can go pee up a rope. <GRIN>

Can I assume that the original post was concerned with a DSP based
SOFTWARE modem? Ie you use the DSP port (like on the Falcon) to connect
your phone line to and some very clever software to run the whole deal.

Now if anyone ever came up with this it would be heaven!

561. Upgrade of Stello. Othello game.

Newsgroup: comp.sys.atari.st
Date: 1994-10-10 14:15:53 UTC
From: atari@leonardo.name
Message-ID: <1994Oct10.141553.24522@imada.ou.dk>
Source record: 179436

Hello everybody.

Stello 1.11 othello is out with features such as

- Works under Gem, all Atari computers, all screen resolutions,
(x resolution must be at least 640)
- Supports Multitos and WINX
- Uses multitasking under Multitos
- Advanced gameplaying algoritms, alfa-beta minimax, iterative
deepening, response killer table, saves game tree and
uses the zerowidth minimax modifikation.
- One of the best Othello programs in the world.
- Background pictures on the board
- Supports english, german, french and danish.
- Dialogs in windows
- Nice interface (3d buttons and checkboxes even under old
tosversions, niceline menus)

New in Stello 1.11.

The endgame search is a little faster and Stello now speaks
french. Small bugfixes.

More details in the documentation. Stello is a Shareware game. I
have uploaded the game to the following ftp sites, in the file
STELL111.LZH.

ftp.uni-kl.de
ftp.uni-paderborn.de
sun.rz.tu-clausthal.de

and if i ever can make it througt the net i will also be at

atari.archive.umich.edu

Happy Othello playing.
Claus J. Pedersen.

All,

I dropped in on a Real Time Conference on Genie last night. Had the chance to talk to Bob Brodie who dropped in also.

I asked him about Insignia's SoftPC software and mentioned that someone on the net was talking with Insignia and trying to get it released as shareware. I mentioned that Insignia said they had to get Atari's approval before the release it for some reason.

Although Bob is no longer with Atari he was around during the time SoftPC was developed. He said there is absolutely no reason Insignia can't release it. He said they need no approval or anything from Atari. He said Atari had a contract with them for doing SoftPC for the dead Atari Unix operating system, but Atari cancelled that project. He said Insignia must be saying what they are for some other reason.

Not sure who it was here who was trying to get it released. I wish you luck and hopefully this info will help you out.

>
>DC Right switched the functions of the Left/Right mouse buttons (i think, or
>was that DC Lefty?)

I think DC Right calls up the file selector when you press the right mouse
button. Could be wrong, though...

>and Start Selector is a replacement file selector from the
>old STart Magazine, adds stuff like drive selectors... not as good as some,
>but better than the standard pre 1.6 tos selectors!

It's better than the post 1.6 file selectors, too! It's by Charles F.
Johnson, and has evolved into the Little Green Fileselector v1.8d! I
highly recommend Little Greenie. It's not as slick Selectric, but it has
some other features Selectric doesn't offer and I've found that it is a
little more compatible with some programs than Selectric.

Hm! What kind of a project is this? Source code? I have recently
been dreaming about building a UNIX-based system for the Powermacs that
through a smart window manager allows GEM programs to be run on the
same desktop with X stuff. The X applications run on PowerPC Linux,
the Atari stuff under 68K emulation. As I (=ZFC, basically) am working
on a library that does almost all of the GEM calls on top of X, I
think that a few good men would be able to make such a system actually
feasible.

>out there than TT owners.

Quite probably, however most issues for Falcons would be the same for
TTs. eg HiColour graphics, 68030, etc.

>: Or should we divide up comp.sys.atari.st[.tech] into
>: comp.sys.atari.st.graphics, .sound, .programming, .games, and so on?

>Yikes... well as long as there is a comp.sys.atari.falcon in there
>somewhere I can live with that! Amiga groups are many and plentiful,
>they have everything from programming to demos covered in their own news
>groups. Why can't we be the same?
>

But why have something *explicitly* for the Falcon? What can the
Falcon *really* do that other ST/TT models can't? The DSP chip is the
only major feature; and DSP articles could live in the .programming or
.sound groups.

>This is Chroma over again... sniff sniff :-)

AFAIK, Chroma was never released because Doug Little had a bit of a 'misunderstanding' with Chroma's prospective distributor, Floppyshop. They had a bit of an argument and Chroma was scrapped. Now Doug Little, along with the rest of the Black Scorpion programming team this time, are writing Apex Media, to be published by Titan Designs. The manuals just going to take that little bit longer than they expected, that's all!

BTW, I saw Apex running at the Bristol Atari Show - I can't wait!!!!

569. File searching tool RESEARCH!

Newsgroup: comp.sys.atari.st
Date: 1994-10-10 16:38:32 UTC
From: A.I.Nicholls@herts.ac.uk
Message-ID: <42332e996c6c@sirius.herts.ac.uk>
Source record: 179442

Request for ideas (Forthcoming Project!)

File Searching tool:

I have to implement the following program for my final BSc Computer Studies year assignment.

The program is aimed to run primarily on Atari ST/Megas/TT and Falcon machines. So far I have the following ideas:

Core Objectives

1. Implement file searching on the following criteria:

Types of file
(Read Only, system, hidden, archive, program flags etc.)

Extensions
Unix type or DOS type wildcards for filenames.

Dates
Date/Time stamps of created files.

Sizes
Files greater, lower than given file sizes.

2. Once those file(s) have been found from the above criteria, implement the following actions:

Deletion of file(s) and/or

Information on file(s)

Output to screen, printer or file
Selectable output Types of file, Extensions, Dates, Sizes (see section 1 for description)

3. Design the program to be implemented in a modular manor, and highlight easier modification for different file systems.

4. Implement program.

5. Design of user interface.

6. Implementation of user interface on Atari through GEM.

7. Write documentation/help files for finished program.

Advanced Objectives

1. Research and possible implementation in directly accessing the disk system rather than using BIOS routines. (built in system routines)

2. Research and possible implementation into searching through archived files. (ZIP, LZH, ARJ?)

3. Implementation of algorithms for searching text within files.

4. Research into how to make the program more modular to be easier to incorporate on a different system (e.g. IBM PC Compatibles)

Any further additions or modifications on existing ideas would be greatfully received. Even if you think the above ideas are OK please email me :)

Email address: A.I.Nicholls@herts.ac.uk

>Dave C

Right. TOS 1.2 was the ONLY TOS to have working flow control through TOS 1.4
(1.04 for the rest of the world I suppose!)
I havn't got a clue about CTS/RTS in versions later than that. My 2.06 TOS is
still in the box.

Sorry for the last post I screwed up with the subject.

I have a Atari STE for sale it comes with the following.

4 Mg's ram
1 high res Atari mono monitor
1 Atari color monitor
20 mgbyte supra hard drive
2400 baud modem
clock

several hundread disks of software including the following with Manuals

Falcon and the mission disk
Lemmen's
Grand Prix
The pawn
Lattice C compiler
Neo Desk
Flash

and alot more I can't remeber

All for 500 + shipping (negotiable) I would prefer to sell to some one in the seattle area.

From: kevan@empyr.dircon.co.uk
Message-ID: <10101994.184838@empyr.dircon.co.uk>
Source record: 179447

Are there any guidelines for what should be posted in comp.sys.atari and
comp.sys.atari.tech ? I know it sounds a stupid question, but a large
proportion of messages are duplicated in both, which *is* a waste of
bandwidth. I presume these groups are not moderated ?
How can we sort out the message groups ?
Anyone feel the same ?

Re: comp.sys.atari.falcon

As an ST owner, I would be glad to see a separate falcon area set up.
No offence to Falconeers, (even if I am jealous !), but a lot of msgs
in these newsgroups *are* falcon orientated, and they are of no use to
me whatsoever. I'm sure that Falcon owners would similarly be glad to get
the ST stuff removed from their mail packet.
Anyway, that's my 5 cents worth !

Byee.

576. Know a good QWK OLR ?

Newsgroup: comp.sys.atari.st
Date: 1994-10-10 18:48:46 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <10101994.184846@empyr.dircon.co.uk>
Source record: 179450

Hi Everyone,

I would like some recommendations for a good QWK OLR. I have tried Captain QWK, IMHO, Mountain and MicroTalk QWK. They all have their own little bugs, and I'm getting fed up with them. I'm using MicroTalk at the moment, but there is a bug in Hi-res that chops the bottom off the line above the one you are typing, and it's *really* annoying !

Any recommendations ?

Cheers.

(Yes I know it says Blue Wave / QWK at the bottom of this, but I'm in the office using Bluewave on the PC right now !)

581. APEX DEMO Wanted!

Newsgroup: comp.sys.atari.st
Date: 1994-10-10 20:56:31 UTC
From: d93rkr@t.hfb.se
Message-ID: <d93rkr.781822591@txfs1.hfb.se>
Source record: 179352

I would like Doug Little and the guys to make a DEMO version of APEX...
so we on the Net, and everyone else ofcourse, could see how NICE APEX really
is...

I mean for a program that propably will cost >150 UKpounds, who want to
buy it without testing it!

A DEMO with some vital things disabled... like SAVE and so on... Maybe
just half the colours or cripled in some other way so people HAVE to buy
it if they want to use it. I think that would make the SALES of such a
program higher... atleast for us that doesn't have a ATARI store around
the corner :^(

Does ANYONE else have this idea... (Maybe you Daron could tell Doug this
idea! :^)

Just some of my thoughts!

583. **FOR SALE: ICD AdpeedSTE + other **

Newsgroup: comp.sys.atari.st
Date: 1994-10-10 22:53:47 UTC
From: dunham_scott@htc.honeywell.com
Message-ID: <dunham_scott-101094171130@mac153-61.mn09.honeywell.com>
Source record: 179353

Individual ATARI ST Hardware/Software items FOR SALE:

*ICD AdSpeed STE 16 MHz accelerator board - $100
(plugs directly into processor socket)

* Monitor Master - $15
Push button switches easily between color & mono monitors. Video & Audio
RCA out also provided.

*ComputerEyes Color Video Digitizer - $100
This digitizes in 16 colors DEGAS format, BUT I'm including DIGISPEC.ACC
that provides SPECTRUM 512 picture output! PLUS, I will also include
RAW2RAW.PRG that converts the ComputerEYES raw *.CE data into RAW format,
viewable with PCHROME.PRG for the ultimate in color and resolution.

*Canon BJ-200 inkjet printer - $175
360x360 dpi - 1 year old - works great - (I'm buying a color printer)
Epson or IBM Proprinter emulation. Prints great graphics too!

* CUBASE 3.1 and newer CUBASE SCORE 2.0 + dongle + manuals - all for $250.

* Studio Module & Cuetrax Module for CUBASE - both for $100
Studio Module is a super add-on that organizes your entire MIDI studio. It
can automate and keep track of ALL MIDI dumps for your entire system. Plus,
it displays all Voice Names in chart format for easy access. And much
more!
Cuetrax is a graphical Tempo display that is far superior to the normal
Mastertrack.

* DigiDesign's Sound Designer - 16-bit sample editing - $75
Supports many samplers, including Sample Dump Standard. Perform EQ,
crossfades, loops, Fast Fourier Transform analysis and display, cut/paste +
hand-draw, etc. Sorry, SCSI not supported - you have to xfer using MIDI.

* SPECTRUM 512 Paint Program + UNISPEC + DIGISPEC + manuals - $40
This includes the oroginal SPECTRUM 512 & bound manual + the superior
UNISPEC.ACC + manual that has many more features including Screen memory
stealing & capture! Also passes pictures back and forth between Degas,
DIGISPEC, UNISPEC, and other graphics programs, thus allowing your picture
to be processed by multiple applications quickly.

* START Magazines + disks - the entire collection! - (make offer)

* 100's of Megs of ARCs, LZHs, and ZIPs of PD Atari stuff + games. I've
saved everything I ever aquired since 1988, including much of the ftp Atari
Archives.

Make offers via e-mail: dunham_scott@htc.honeywell.com

Cheers,
Scott

>: a 32MHz board? (This isn't a 'are you happy with it running this way'
>: but a test to see if you _are_ running with this system).

> I AM! Although I would like to change that situation. My problem:
>I happen to be an American and can't seem to find a place to order the
>32MHz board. If anyone would help me out, that would be greatly
>appreciated.

I also am running an unaccelerated Falcon, and dont have NVDI either!

but with regards of finding places in USA, try Toad computers at
1-800-448-8623. Page 36 of their catalogue shows several options:
Eagle Sonic takes you to 32MHz. Might Sonic adds up to 32mb of TT fast
RAM. Then there are 040 accelerators, rack mounted cases, and other
stuff! Oh for the lack of money

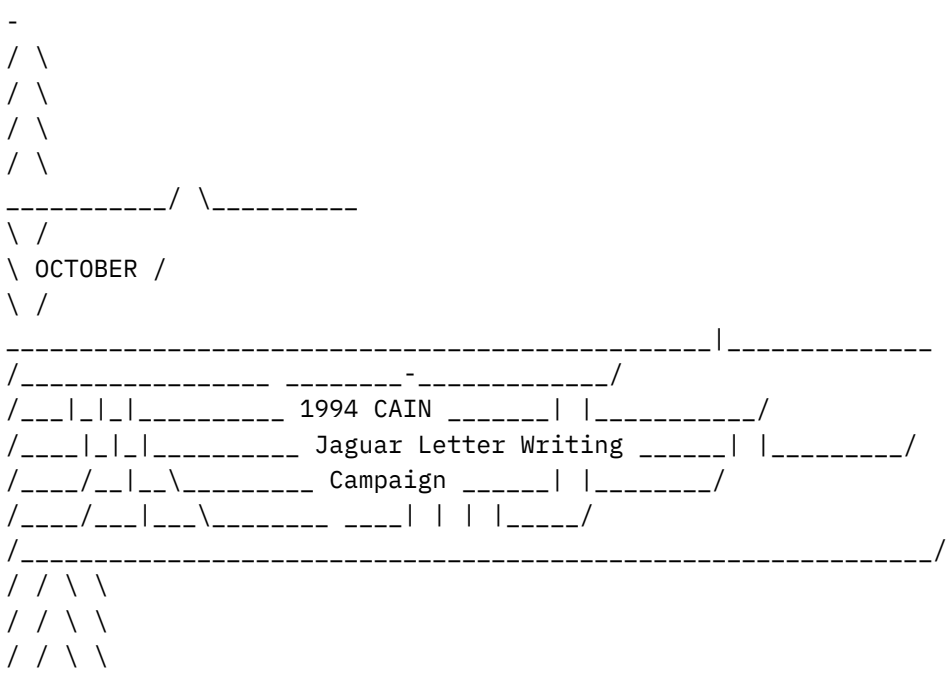
586. OCTOBER Jaguar Letter Writing Campaign (Re-Post)

Newsgroup: comp.sys.atari.st
Date: 1994-10-11 00:01:35 UTC
From: aa399@cleveland.Freenet.Edu
Message-ID: <37ckl2$ap2@usenet.INS.CWRU.Edu>
Source record: 179362
Cross-posted to: rec.games.video.atari,comp.sys.atari.st,comp.sys.atari.advocacy,rec.games.video.misc,alt.games.lynx

I have been asked by several people to repost this October Jaguar Letter Writing Campaign text file. If you don't think this campaign will work then just don't write. But for those of you that want to see great games for the Jaguar, please read the following. Thanks.



Organized by: Len Stys

E-mail: aa399@cleveland.freenet.edu

The Jaguar 64-bit interactive multimedia system is the most advanced video game system ever created. If you are reading this, you either own a Jaguar or plan on buying one as soon as some more games become available for it. You are also interested in finding out what you can do to get your favorite games made for the Jaguar. I am glad to see that you are interested and if everyone participates in this campaign, we will _all_ be seeing our favorite games made for the Jaguar.

Will writing letters work? Yes, it will work. I've learned from my prior business experience that letter writing does work. There are many ways of determining a demand for a product, but nothing is more convincing to a company president than hundreds of letters from consumers that are asking for their product. Letters are concrete proof that demand exists.

Atari Corp. and Williams (WMS Industries) are talking. The Jaguar will be getting Defender, Joust, and Robotron. Is it because of our letter writing? Maybe. Will the Jaguar get Mortal Kombat II or Mortal Kombat III because of our letters? Maybe. If Capcom can make Super Street Fighter II for the 3DO, Williams can make Mortal Kombat II & III for the Jaguar.

If you do not see the games you want for the Jaguar in this campaign, do not be concerned! When the following game companies start making games for the Jaguar, the Jaguar will be on its way to becoming the most popular home video game system in the world! And when the Jaguar is on its way to fame, your favorite games will be made for it! But the campaign will not work unless you participate. And you cannot only write one game company and not the others. Each time one company signs to make Jaguar games, it helps get another company to make Jaguar games. Let's make this writing campaign the most effective video game writing campaign that the world has ever seen!

Ok, the companies we are concentrating on are companies that are familiar with high quality graphics and sound in games. Most of these companies are well-known for PC games.

The first part of this text is the October part of this campaign. The second part is the previous September part. If you are just beginning to participate in this campaign, you should write the companies listed in the September part as well.

****
****************************** OCTOBER, 1994 ******************************
****

Sierra On-Line Inc.
Dynamix Inc.
LucasArts Entertainment Co.
NovaLogic

>>>>>>>>>>>>>>>>>>>>>>>>> Sierra On-Line Inc. <<<<<<<<<<<<<<<<<<<<<<<<

Sierra On-Line is a company that is well-known for their role-playing games such as their Space Quest and Police Quest series. The company is also known for their latest hits in the PC world: Gabriel Knight, Aces Over Europe, and Leisure Suit Larry VI. Sierra On-Line is planning to release their new title, Phantasmagoria, very soon.

Sierra On-Line is definitely a company that needs to be developing for the Jaguar if the Jaguar CD-ROM is to become used. If Sierra On-Line starts making games for the Jaguar CD-ROM, several other companies will make games for it as well.

The mailing address for Sierra On-Line is:

Kenneth A. Williams, President
Sierra On-Line Inc.
P.O. Box 485

Coarsegold, CA 93614

The following is a list of things in which you may want to say in your letter to Electronic Arts:

Dear Mr. Williams,

1) How much you enjoy Sierra On-Line games.
2) How you have been buying Sierra On-Line games for your computer since the company started making computer games (if this is true).
3) How much you enjoy your Atari Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) How you would like to see Sierra On-Line producing several Jaguar CD-ROM games.
6) The games you would love to see on the Jaguar (choose two or three Sierra On-Line games).
7) How you believe Sierra On-Line games would be fantastic on the Atari Jaguar.
8) How you will run out and buy Sierra On-Line games when they are made for the Jaguar.
9) Thank you to Mr. Williams for reading your letter and for considering producing games for the Jaguar.

In my letter, I will also be encouraging Mr. Williams to make games which have the option of using a keyboard with the Jaguar. A keyboard can be created for the Jaguar and Sierra On-Line could work with Atari Corp. to produce one for it. The use of a keyboard in role-playing games help children learn words. This is something that Sierra has gotten away from in PC games.

I'm also writing Sierra to release HOYLE Card Games for the Jaguar. I love this game and it would be great to see a modem feature being used in the Jaguar version of this game.

>>>>>>>>>>>>>>>>>>>>>>>>> Dynamix Inc. <<<<<<<<<<<<<<<<<<<<<<<<<

Dynamix Inc. is a game company owned by Sierra On-Line. This game company makes many wonderful titles for the PC such as: Betrayal at Kronder, Aces of the Pacific, and Front Page Sports Football Pro. The company is planning to release: Front Page Baseball, Battledrome, LodeRunner: A Legend, MetalTech: Earth Siege, Alien Legacy, and an excellent reviewed game called Aces of the Deep (submarine game).

Dynamix Inc. is making some real great games and these games would be a very good addition to the present Jaguar game library.

The mailing address for Dynamix Inc. is:

Alan Higginson
Executive Vice-President
Dynamix Inc.

P.O. Box 978
Oakhurst, CA 93644-0978

The following is a list of things in which you may want to say in your letter to Dynamix Inc.:

Dear Mr. Higginson,

1) How you enjoy Dynamix games on the PC.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose two or three Dynamix games--I'm choosing Front Page Sports Football, Alien Legacy, and Aces of the Deep).
5) How you believe Dynamix games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
6) How you will run out and buy Dynamix games when they are produced for the Jaguar.
7) Thank you to the person for reading your letter and for considering producing games for the Jaguar.

>>>>>>>>>>>>>>>>>>> LucasArts Entertainment Co. <<<<<<<<<<<<<<<<<<<

LucasArts is famous for making games based on popular movies. The company has also has several popular titles out for the PC. Some of these titles are: Star Wars Rebel Assault, X-Wing, Indiana Jones and the Fate of Atlantis, Monkey Island 2: Le chuck's Revenge, and Day of the Tentacle. And if there is any truth to the rumor of a new Indiana Jones movie, LucasArts will probably make a great game based on this movie.

The mailing address for LucasArts is:

LucasArts Entertainment Co.
LucasArts Games Division
P.O. Box 10307
San Rafael, CA 94912

The following is a list of things in which you may want to say in your letter to LucasArts:

Dear Sir or Madam,

1) How much you enjoy LucasArts games.
2) How much you enjoy the Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games you would love to see on the Jaguar (choose two or three LucasArts games).
5) How you believe LucasArts games would be fantastic on the Atari Jaguar.
6) How you will run out and buy LucasArts games when they are made for

the Jaguar.
7) Thank you to the person for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX LucasArts by the phone number: 415/721-3344.

>>>>>>>>>>>>>>>>>>>>>>>>>>>> NovaLogic <<<<<<<<<<<<<<<<<<<<<<<<<<<<

NovaLogic is known for its high-quality games on the PC. The president and CEO, John Garcia makes sure each game title released is of the highest quality. NovaLogic is known for producing Comanche: Maximum Overkill (a game title that rated high on the Most Wanted Games for the Jaguar listing from CANI Newsletter). The company also produced WolfPack (a submarine simulator) and UltraBots. The latest and greatest game from NovaLogic is Armored Fist. This game is highly praised by reviewers that have seen it.

John Garcia is interested in producing modem games and networking games in the future. NovaLogic's games would be a great addition to the Jaguar game library.

The mailing address for NovaLogic is:

John Garcia, President
NovaLogic
19510 Ventura Blvd.
Suite 200
Tarzana, CA 91356

The following is a list of things in which you may want to say in your letter to NovaLogic:

Dear Mr. Garcia,

1) How much you enjoy NovaLogic games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose a couple of NovaLogic games).
5) How you believe that NovaLogic games will be even more fantastic when using the graphics and sound capabilities of the Jaguar.
6) How you would like to see NovaLogic games that use the Jaguar voice-modem and networking capabilities.
7) How you will run out and buy NovaLogic games when they are produced for the Jaguar.
8) Thank Mr. Garcia for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX NovaLogic by the phone number: 818/774-0684. Please consider writing NovaLogic through the U.S. mail first and then FAX NovaLogic.

Please spread the word around about this letter writing campaign on online systems, BBSs, message areas, user groups, and any other place that you can help get the word out abuot this campaign.

Also, please tell your friends! It is very important to get everyone participating in this letter writing campaign!

********** THANK YOU! **********

****
********** SEPTEMBER, 1994 **********
****

Atari Corp.
id Software
WMS Industries Inc.
Capcom USA Inc.
Electronic Arts Inc.

>>>>>>>>>>>>>>>>>>>>>>>> Atari Corp. <<<<<<<<<<<<<<<<<<<<<<<<<<<

First, we will first be writing Don Thomas, Jr. at Atari Corp. to let him know that we are participating in these campaigns. No, we aren't writing to annoy him. We are writing him so that Atari Corp. knows the magnitude of this letter writing campaign. If Atari Corp. knows that five-hundred people will be writing Dynamix in October, the appropriate person at Atari can contact this company on becoming a developer for the Jaguar during this time. Do not expect a letter from Don Thomas, Jr. We are not writing him for a response. We are only writing him to inform him of what we are doing.

Atari's mailing address is:

Atari Corp.
Attn: Don Thomas, Jr.
1196 Borregas Avenue
Sunnyvale, CA 94089

Place the letters: C.A.I.N. at the bottom left side of the envelope so that Atari will know what it is for.

Please use the following form letter:

(date)

(your address)

Don Thomas, Jr.
Atari Corporation
1196 Borregas Avenue
Sunnyvale, CA 94089

Dear Mr. Thomas,

I am writing you to inform you that I will be writing the following
game companies to encourage them to make games for the Jaguar.
I hope that my efforts will help Atari Corp. to sign these companies
to make games for the Jaguar.

The companies I will be writing are:

September: WMS Industries, Capcom, Electronic Arts
October: Sierra On-Line, Dynamix, LucasArts, NovaLogic
November: Spectrum Holobyte, Psygnosis, Origin
December: QQP, Broderbund, Konami

Thank you for reading my letter and for recording the number of
people writing these companies.

Sincerely,

(sign your name)

(print your name)

>>>>>>>>>>>>>>>>>>>>>>>>>> id Software <<<<<<<<<<<<<<<<<<<<<<<<<<

The letter to id Software should thank the company for producing
Wolfenstein 3-D for the Jaguar, encourage them to make Jaguar DOOM the
best that they can make it, and to encourage the company to make
QUAKE for the Jaguar.

id Software's mailing address:

Jay Wilbur, CEO
id Software
Town East Tower
18601 LBJ Freeway
Suite 615
Mesquite, Texas 75150

The form letter to Atari Corp. is the only form letter that will be used
in this campaign. This is because companies do not take form letters as
seriously as those that are originally written.

The following is a list of things which you may want to say in your
letter to id Software:

Dear Mr. Wilbur,

1) How much you enjoy Jaguar Wolfenstein 3-D.
2) How much you like id Software.
3) Thanks for making Wolfenstein 3-D for the Jaguar.
4) How you would like to see the best graphics possible for DOOM
on the Jaguar.
5) How you would like to see four-player or more networking capability
for Jaguar DOOM.
6) How you are excited about Jaguar DOOM coming out this year.
7) How you would like to see QUAKE made for the Jaguar.

8) Thank you to Mr. Wilbur for reading your letter.

Another thing which you may want to include in this letter is concerning the Jaguar resolutions. id Software is using a lower resolution on the Jaguar because they want to get the game as quick as Jaguar Wolfenstein. I, personally, do not care if Jaguar DOOM is as fast as Wolfenstein. One suggestion could be to make two modes (just like on the PC). One mode is for higher resolution and slower speed. The other mode is for a lower resolution, but higher speed.

>>>>>>>>>>>>>>>>>>>>>> WMS Industries Inc. <<<<<<<<<<<<<<<<<<<<<<

As of September 14, 1994, Mortal Kombat II is not being produced for the Jaguar. And Acclaim has no plans to produce Mortal Kombat for the Jaguar. But next year, WMS Industries will be able to release Mortal Kombat II for any game system that the company wishes to release it for. The time is now to let WMS Industries know that we want to see Mortal Kombat II and Mortal Kombat III for the Jaguar.

Mortal Kombat II is by far the #1 most wanted game for the Jaguar according to the Most Wanted Games for the Jaguar list by CAIN Newsletter. If this game is released for the Jaguar, the Jaguar will be the most wanted game system.

The mailing address of WMS Industries Inc. is:

Louis J. Nicastro, CEO
WMS Industries Inc.
3401 North California Ave.
Chicago, IL 60618-5889

OK. I don't think I have to remind you that you should write as neat and as professional as possible to get the best results. If you certify your letter, you may even reach the president with your letter.

The following is a list of things in which you may want to say in your letter to WMS Industries Inc.:

Dear Mr. Nicastro,

1) How much you enjoy Mortal Kombat II
2) How you like the games that WMS Industries makes.
3) How you enjoy the Atari Jaguar.
4) How you think the Atari Jaguar is the only game system that will do the game justice.
5) How you will run out and get the game for the Jaguar as soon as it is released.
6) How you would also like to see Jaguar be the first system to get Mortal Kombat III.
7) Thank you to Mr. Nicastro for reading your letter and for considering making Moral Kombat II for the Jaguar.

>>>>>>>>>>>>>>>>>>>>>> Capcom USA INC. <<<<<<<<<<<<<<<<<<<<<<<

Capcom is known for producing the Street Fighter II series of games. The company is also known for producing games such as The Great Circus Mystery Starring Mickey & Minnie Mouse, Demon's Crest, and Saturday Night Slam Masters. The company also does conversions of popular titles such as Wizardry V and Eye of the Beholder.

Super Street Fighter II Turbo is second only to Mortal Kombat II on the most wanted games for the Jaguar CAIN Newsletter listing. If the game existed for the Jaguar, it would no doubt sell a lot of Jaguars. But Capcom is not making Super Street Fighter for the Jaguar and no plans have been announced to do so in the near future.

The strange thing is that Capcom is making Super Street Fighter II Turbo for the 3DO platform. The game will even have better graphics than that on the SNES and Genesis. But this only means that if Capcom will make a version of SSFIIT for a much higher-priced system than there is a chance that the company will be willing to make a Jaguar version.

The mailing address for Capcom USA Inc. is:

Scott Smith
Product-Development Coordinator
Capcom USA Inc.
475 Oakmead Parkway
Sunnyvale, CA 94086

The following is a list of things in which you may want to say in your letter to Capcom USA Inc.:

Mr. Smith,

1) How much you enjoy Street Fighter at the arcades.
2) How you like the games that Capcom makes.
3) How you enjoy the Atari Jaguar.
4) How you think the Atari Jaguar is the only game system that will do the game justice.
5) How you will run out and get Super Street Fighter II Turbo for the Jaguar as soon as it is released.
6) Thank you to Mr. Smith for reading your letter and for considering making Super Street Fighter II Turbo for the Jaguar.

You may also want to FAX Capcom USA by the phone number: 408/774-3995. But sending mail through the U.S. Postal Service may prove to be more successful.

>>>>>>>>>>>>>>>>>>>>> Electronic Arts Inc. <<<<<<<<<<<<<<<<<<<<<<<

Electronic Arts is the publisher of some incredible games such as: NBA Showdown, FIFA International Soccer, PGA European Tour Golf, NHL Hockey '94, Wing Commander, Super Wing Commander, John Madden NFL Football, Escape from Monster Manner, Twisted, Mario Andretti Racing,

MLBPA Baseball, and many more! Electronic Arts also owns several other software companies that they may give the OK to develop the Jaguar for if they see there is a demand for Jaguar games.

Unfortunately, Electronic Arts is also a major backer of 3DO, a company that is a big competitor of Atari Corp. Electronic Arts is spending a lot of time and money on making games for 3DO that it could be spending on the Jaguar.

There is hope though! Electronic Arts is a licensee. This means that the company has Jaguar developers units. Electronic Arts' management just has to give the OK to make games for the Jaguar.

The mailing address for Electronic Arts Inc. is:

Lawrence F. Probst III, President
Electronic Arts Inc.
1450 Fashion Isle. Blv.
San Mateo, CA 94404

The following is a list of things in which you may want to say in your letter to Electronic Arts:

Dear Mr. Probst,

1) How much you enjoy Electronic Arts games.
2) How you have been buying Electronic Arts games for your computers since the company was started (if this is true).
3) How much you enjoy your Atari Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) The games that you would love to slee on the Jaguar (choose two or three Electronic Arts games--I'm choosing John Madden NFL Football!).
6) How you believe Electronic Arts games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy Electronic Arts' games when they are produced for the Jaguar.
8) Thank you to Mr. Probst for reading your letter and a thank you for considering producing games for the Jaguar.

> Are there any guidelines for what should be posted in comp.sys.atari and
> comp.sys.atari.tech ?

The names of those groups are comp.sys.atari.st and comp.sys.atari.st.tech
resp. (related groups are comp.sys.atari.8bit, comp.sys.atari.advocacy,
comp.sys.atari.announce, comp.binaries.atari.st and comp.sources.atari.st).
For each of those groups there must exist a ``charter'', but I haven't the
faintest idea where you might find them. For general guidelines on posting
to Usenet you should consult the regularly posted articles in
news.announce.newusers.

> I know it sounds a stupid question, but a large proportion of messages
> are duplicated in both,

These are (usually) not duplicates, but crossposted messages.

> which *is* a waste of bandwidth.

Since there is only *one* article (which appears in two or more newsgroups)
no bandwith nor diskspace is wasted.

> I presume these groups are not moderated ?

Correct (comp.binaries.atari.st and comp.sources.atari.st are moderated).

> How can we sort out the message groups ?

What exactly do you mean? If you want to know how to change the order
in which your newsreader presents the articles to you, then you should
read the manual for your newsreader.

Regards,
Waldi

589. 3.5" IDE drives inside a Falcon

Newsgroup: comp.sys.atari.st
Date: 1994-10-11 00:20:29 UTC
From: ralunsfo@uncc.edu
Message-ID: <37clod$gni@news.uncc.edu>
Source record: 179394

I posted this to st.tech with no luck....

What I'm looking for is info on what is required to swap the internal Falcon IDE drive with a 3.5" Connor IDE drive. Will the cables that come with the kit plug right in, or do I need special adapters, etc? I know I will have to remove the internal speaker (that doesn't bother me too much:).

In short, could someone post any information, or detailed instructions on this operation?

Thanks,
Russ

As far as I understand it, you need a 2.5" cable to 3.5". I opened my
Falcon to see if I could, but the cables dont match. The internal
2.5" is very high density, and als supplies the power on the cable,
so youll also need some way to get power to the drive. Also, from
what I understand, the power supply of the Falcon (like many STs)
is rather weak. I know people have done this, but I am rather
concerned about that

You should be able to find the cable from any notebook dealer who
deals with 2.5" drives...

Having seen Geneva clash with so many programs whilst running on a
variety of machines, I have no hesitation in leaving it behind in
favour of Mag!X. Maybe it's different on a Falcon. I sure hope so,
otherwise you will be missing out in a big way!

> Format (since no one around here carries ST Review). I would suggest that
> the -2 1ifference should be 0% to +2%.

Speaking as an STF reviewer, I can say quite catagorically that the "American-ness" of a program has no real effect in any way on the rating which I give. It's the quality of the program that matters. Features are only a part of it. A program like KCS Omega has features for breakfast, dinner and tea, but the user interface, manual and learning curve make it a complete turkey for the beginner. Breakthru has far less features but has a nice feel to it and works well. Who can say which is the better program?? The advanced KCS user will swear by it, but the reviewer has other considerations. It's a complex issue, all I can really say is that the origin of a program has no, but NO, effect on the rating attained. Period.

> Mind you, I don't own NeoDesk, and I haven't seen Ease, but I've noticed
> these differences with other programs where I thought the ratings should
> have been at least equal. And just for the record, this isn't a "Buy
> American" commercial, either; just my honest opinion.

Believe me, it is incredibly close between these two! It may ultimately hinge on a) speed and b) memory usage. We shall see! :-)

Cheers for now,
Andy.

Why can't we have 8 megs like PC clone users can, I think the jump from 4 to 14 megs is far to much for a home user....

Another thing Atari stuffed up on, I think the Jag will be next...

We can't even get PAL Jags here....

PLEASE PLEASE.

Can some of the people that manage these Atari Archive sites,
Please have a file extension standards or fix up your Gopher servers...

THIS IS A BIG PROBLEM FOR PEOPLE WITH GOPHER CLIENTS...

THERE ARE ONLY 3, YES THREE ATARI ARCHIVE SITES WITH GOPHER SERVERS
THAT WILL EXCEPT ATARI FILE EXTENSIONS, that I know of...

Atari Archive..
TU-BERLIN
HENSA...

Only these sites support Atari file Extensions...

Some one at uni-kl.de was going to fix there Gopher client, but that was
months ago, I just tried to get a file with a .lha extension, this is not
supported, or any other Atari specific extensions...

Come on you Admin People if you are going to allow any kind of File Extensions,
please make sure that these files can be recieved from your Gopher client...

So PLEASE Fix up your File Standards or your Gopher Clients.....

THANKS.....!!!!

Well, I'm doing it - selling my old friend - so, here it is:

ATARI Mega 2 ST, w/TOS 1.4 installed
104meg HD, internal (from Toad)
Color (SM1124) and mono (SM147) w/monitor master switch
SupraModem 2400(and cable)
Various stuff on HD, incl:
Neodesk 3.0
WordUp
Maxifile
Flash
Michtron HD turbo kit
Degas Elite
on Floppy:
Red Storm Rising
Flacon
Tetris
....and other things
All about incl. master discs and manuals

I'm selling during the month of October, and will consider any reasonable
offer. I would like to sell the entire package at once.
I also have a Panasonic KX-P1124 printer for sale - original box/
manuals, w/cable for ATARI, make me an offer!!

Please reply E-Mail!!!!!

Steve,

Sounds like you need more RAM to work with. Upgrade from 2MB to
4MB and many of your arguements will disappear. The vast majority of
upgrades require more memory... especially when talking about application
or utility software. I haven't found anything about NeoDesk 4 that makes
me want to return it. It still has some bugs but Dan is working on them...
and how many times in one sitting do you need to run the icon editor???

Roger,

Again, I don't see what you are complaining about with NeoDesk 4. It isn't a DOG. Help buttons on things are good, believe it or not. Weirdly enough, my system runs faster with NeoDesk 4 than without it... don't ask me how, but that's the truth.

604. Help needed with Priam HD

Newsgroup: comp.sys.atari.st
Date: 1994-10-11 09:04:21 UTC
From: pd@mole.bio.cam.ac.uk
Message-ID: <37dkel$eft@lyra.csx.cam.ac.uk>
Source record: 179371

I have a Priam 330mb SCSI hard disk which I bought second hand.
I eventually got around to setting it up yesterday. There is power going
through it as it sounds like a jet engine starting up :).
The drive clicks when the falcons power is switched on and again when it
gets to the part when it looks for SCSI hard disks, but it says SCSI 0
not responding.

As far as I can tell everything is connected properly, but I don't know
how to change the SCSI id. There is nothing obvious on the drive, except
for a row of 10 jumpers next to the SCSI connector. At the moment, the
4th, 6th and 7th of these are connected. (1st being next to the SCSI port)
I tried taking all of these out but the drive wouldn't start up without them.

Any ideas?

Phil

From: avsec@westminster.ac.uk
Message-ID: <CxI6uF.Jnn@westminster.ac.uk>
Source record: 179377

Can anyone explain the SpeedoGDOS 5 and NVDI situation ??

I shall soon be getting NVDI 3 , but I also want SPeedo GDOS 5.

I sort of got the idea that NVDI had SPeedo GDOS built into it.
Surely this can't be correct!! 8-o
Also, is NVDI 3 likely to be upgraded in the very near future for
SPeedo 5 compatibility ?

BTW - I use my Falcon totally standard apart from a maths co-pro.
It makes maths intensive programs about 15 times faster - marvellous.

TruePAint is a killer in TC mode....
and I use the demo of BlowUp for 16 colour mode - it kills changing
to another SMALL res screen.

I can't live without Blow/Screen/ and NVDI for much longer!
General speed is OK though - I can live with it - it's just POV that
kills...

Is anyone out there into Demos?
I have got hold of what I reckon to be the best ST music demo ever. It has more stylish music and little swirly objects than the mind can cope with - and a highly amusing and original scrolltext (for once). It runs on ALL STFM's and STE's. The music is sooooo good, it has been recorded directly off the Atari ST and is now for sale as an EP through the pages of Future Music Magazine in the UK as the 'Wasting the Dawn EP'. The crew themsleves are featured in the November issue of ST Format. THIS DEMO WILL BLOW YOUR MIND!!!!
If you'd like a FREE copy, please write to:
'sdb3@aber.ac.uk'

If you supply a disk, I'll post a copy back free. If you can't be bothered with that, I'll supply a disk and we'll settle up later.

DON'T MISS OUT!!!

Hisoft, Digital Arts, 2B, ROM, Gribnif, Oregon, Maxon, Steinberg,
Compo et al seem to be surviving.

Yes there are new titles (in Europe): Papyrus, NVDI 3, Magic 3,
Chagall, Papillon, DA Picture, DA Vector, etc etc.

thanks Neil, you have made my point perfectly - that the base 16MHz
system is fine for the majority of people, myself included. I don't
think I'd gain anything from the 32Mhz system except CPU trouble with
most my demos! I'd suggest an FPU to anyone here though esp. if you are
planning on raytracing. Failing that NVDI is essential and hopefully
version 3.0 will hold something special for the Falcon.

I've got Figlet up and running perfectly on my Falcon and I don't see it should be any different on the STE. I have a directory called Figlet in which I have the figlet.ttp and the entire set of fonts. I double-click figlet.ttp and enter:

-f roman

Then the screen goes blank and you type and lo and behold the figlatised words appear in the roman font. If you type:

-f roman -c

then it appears in centered on the screen. It's just a basic program I bet it works in 512K and on your STE fine, you may just have to jiggle the files about though - set it up like I have and see what happens.

: Surely this can't be correct!! 8-o
: Also, is NVDI 3 likely to be upgraded in the very near future for
: SPeedo 5 compatibility ?

Right, I am using Speedo GDOS 5.0 and NVDI 2.5. It goes something like this:
You run Speedo without NVDI and all goes according to plan, usual slow
screen updates but the font cache does improve programs like Atari Works,
Papyrus etc...

Run NVDI before Speedo and you get a little message saying:
NVDI found and used by Speedo
When you auto boot Speedo, the difference in screen redraws is amazing.

I don't know how to do it on mxrn either. I've fiddled with a few
menus
and even tried editing a file called mxrn.dat, but nothing happened.
Maybe
I should try inventing some environment variables with names like
mxrn.enableWrapMode...

(mxrn = Motif/X version of rn, I suppose...)

A folding text editor for the Atari ST

Hi folks. I'm posting this to announce the release of FED, a PD text
editor that I have been working on over the summer. It is online at
micros.hensa.ac.uk, or alternatively you can email me and I'll send
you a uuencoded arced copy.

FED features:

- reverse video text selection
- emacs style kill/yank
- automatic indentation
- block indent/unindent
- wordwrap
- can fold blocks of text out of sight, using code indentation
- brace match function
- incremental 'as you type' searching
- 'grep' function to search/replace through multiple files
- up to 20 files can be opened at once
- handles all 256 characters
- binary mode for hacking program and data files
- macros and key repeat
- shell function to run external commands from within FED
- supports Mark Williams C -e error handling
- can use 50 line mode in high rez, and 80 columns in low rez
- configuration utility to alter the key bindings
- built in tetris game

AFAIK only ARJ packer for ST was done by J.Lamac (LEC), but unfortunatelly
he lost its sources (disk crash) and didn't want to release saved binaries.

Only his ARJPack (packing of executable files) is available. Very powerful,
with additional code optimizing.

643. gnuplot

Newsgroup: comp.sys.atari.st
Date: 1994-10-11 16:12:29 UTC
From: t150315@proffa.cc.tut.fi
Message-ID: <37edhd$ver@proffa.cc.tut.fi>
Source record: 179309

I would like to know if the current version of gnuplot (v. 3.5) has
been ported to atari. I have tested two atari versions of gnuplot,
v. 3.0 on a.a.u.e which is quite slow and v. 3.2 in uni-paderborn
which is faster but buggy (chrases badly on the bivariant demo file).

I'd rather have a compiled version 3.5 than compile it myself as
gnuplot distribution packed is quite large (2MB) and doesn't have a
makefile for atari (although it has a terminal driver).

Hi,

Our company is going to finish a demo of a new Falcon only game around 1-11-1994 to rouse interest. The demo will be PD. The game itself will be released around 1-12-1994 and will be commercial. Hold your breath and take a seat, although the net said it will total ridiculous the game will be: PONG 2000, it will feature Pong 2000, Pong Clasic and Pong Duel. It will have 101 levels divided in 6 sectors, which will have raving house beats. The game will use scroll. There will be power ups and fiendly aliens. All this in True Colour mode running on VGA, TV or RGB. The price will be fl 49.95, $29.95 or 19.95 pounds. If there are any companies out there who would want a demo and an acount aplication form, or any company you know who should receive this demo e.a., please send either their e-mail or snail adress to us. We will have a retailers discount of 30% (for 2-9 copies bought), or a wholesaler discount of 50% (more then 9 copies bought). Please spread this messages as fast and far as possible; only this way the Falcon can have it's quality software. Individuals can also order directly with us. All orders before 1-12-1994 will be granted an additional 5% discount. Please include payment if you do not have a trade account, or apply for one.

Fast Technology has one that I think they still sell, and the people I've
heard from that have it all love it. It's a 68030 running at 33MHz.
Should be enough room (just barely) in your Mega ST case to install it.

Try contacting TOAD (I think they carry it) for prices and info. Their
number is 1-800-448-TOAD.

Well, that puts me in good company, at least. :)

C'mon, Roger... just because a bit of software is written in GFA does not make it 'crap.' Granted, GFA has some memory management problems and requires some workarounds on the Falcon, but there is plenty of doggiedoo software out there written in C, too. :)

I wouldn't recommend GFA (or ANY language) for every project, but I wouldn't stereotype a program based solely on its language, either.

: Really? What are they? I've only found a couple of Falcon demos that are
: vaguely good - Laser and Xperience.

Then you are not looking in the right place!!! The demos I have that I'd
recommend are:-

1) Are You Experienced by EKO - superb DSP effects, light sourced 3D
space battles, stunning plasma fire effect and real-time Cybermorph fly by.

2) Cycedelic Knockout by the Mugwumps - There really isn't anything close
that can touch this amazing demo, if you like hard tekkno effects that
make your room shake and melting 8-track modules this is where it's at.

3) Weltscmerz by Avena (sorry for bad spelling) - a very shocking but
interesting demo with a strong anti-war theme and pounding techno track.
Lots of graphical imagery of death and destruction, anims, pictures and
text with a meaning.

4) Strange Circumstances by New Trend - some very nice and clever effects
make this a worthy demo to watch a few times, but not in the 'top' league.

5) Autowashen Verbooten by Lazer - 6.5meg of pure, unadulaterated demo,
15 mins of non-stop mind blowing effects. morphing. vectors. great
music. clever and colourful effects. The one that no-one should be without.

I can name a _lot_ more if you like, I think I'll compile a
falcon.demo.faq soon as my PD library seems to be overflowing with the
things.

Well, in it's interpreted mode, there is no way that GFA could be
faster than a well written and compiled C or Pascal program. There
is simply too much work for the cpu to do in the 'interpretation'
of a high level language to cpu instructions.

Properly written, a compiled GFA program compares very favorably, in
most cases, to the speed of C or Pascal. But as Roger said, it will
never execute faster than assembly. Program _development_ time is
another matter, of course. ;-)

> editor...

Hi again Roger,

A couple of things. First, you might want to try the new release 002.
Second, you might want to read up on the memory configuration settings.
NeoDesk 3 did not have these options, and in certain settings they can
actually make things worse.

> That boot up message get on my nerves, if they ever fix it I will remove that
> message.....

The bootup message doesn't affect bootup speed. It is there for copyright
purposes. Most newer commercial programs have something similar.

> All this with NO TSR's or ACC's, come on Gribnif what went wrong, I don't like
> NEODESK 4 at all, far far to cluttered, features that are not needed, buttons
> to small, far to slow, (16mhz cpu) I don't need help on every thing, there is
> a Help button on every thing you select, this is going to far...

I must admit, I never thought I'd have a user say that they had too many
features. However, I don't understand how you can find the small HELP
button in each dialog distracting. It is out of the way, doesn't consume
any additional memory (help system is kept 100% separate to cut down of
memory usage). However, if you ever need help, you'll be glad its there.

>
> [DELETED:...references to memory fragmentation with supporting tables...]

Hi Steve,

Two things. First, you should look at the new release 002 of NeoDesk. We just released a patch for it. It has some substancial improvements in memory management. I will be posting it on the Internet in the next day or two. Second, you should check your Memory Configuration. With the wrong setting here, you can substancially increase your memory fragmentation (NeoDesk 3 didn't offer this level of control.)

> Neodesk 4 took 4 minutes 23 seconds to do a partition-to-partition copy of

>
> The GEM desktop took 3 minutes, 51 seconds to copy them, and 22 seconds
> to delete them.

Did you turn off background file operations in NeoDesk 4? NeoDesk 4's file operations should be faster than version 3 (they are basically the same code cleaned up).

> Kobold took 35 seconds to copy them.

You can always copy faster by going direct to disk (trust me, we've tested that). The problem is that you are "breaking the rules" and are more likely to run into trouble with non-standard drives. NeoDesk tries to do things as "legally" as possible. NeoDesk 4 is one of the fastest ways to copy while staying "100% legal". This is an old debate that actually started back when we released NeoDesk 2, so I'd rather not get into all of it again.

> Everything was set-up as close to each other as possible. (All had
> verify on, memory limitations set to nil, run in single-tasking mode

> etc.)

Running NeoDesk 4 in single-tasking mode is not the same as turning off its background disk access (which is done right from the copy/move dialog).

> Hopefully the problems can be fixed. Neodesk 4 doesn't like copying
> large amounts of files to/from floppies... It tends to crash (Neodesk
> v3.04 doesn't). Memory fragmentation... Speed....

We haven't experienced this, but maybe you ran into some other unrelated problem that made it seemed that the copying was the problem. I would try release 002 and see if that fixes things.

> has all regular libs stdio, maths, comms etc and with GRAPHICS?

Lattice C - will do everything you need - but it costs real money
though not very much compared with PC packages.

GNU C - is a UNIX style package which will also do everything you need.
Its free, but requires some setting up. If you go the whole hog and install
MiNT and MINIXFS partitions - then GNU C (GCC) gives you a C development
system very similar to that of the UNIX machine.

GCC is not GEM based in anyway - although I believe there is now a GEM
shell for it.

I run both. Its a case of horses for courses.

:-)

Roland.

> What would I need to do to a External Mac drive (Scsi) to run it on
> my Atari? Is it possible, or am I dreanming?
> any help here would be great.

If you connect a Host Adaptor to the Atari DMA port - then it should be possible to use a Mac drive. The Host Adaptor will come with the necessary software - though you might have to have a cable made up - depending on what socket the Mac drive has on it.

After that its just a case of Parity, SCSI IDs and Termination - which you have to deal with whenever you connect a SCSI drive to anything (though if you buy an Atari drive from a dealer its mostly dealt with for you).

A good Host Adaptor would be:

ICD Link 2

Its not the cheapest - but it gives you the best chance of success IMO.

:-)

Tech stands for Technical, so things like "this game is super-cool" should probably not appear, unless it's _really_ complicated.... :-) :-).

> I know it sounds a stupid question, but a large
> proportion of messages are duplicated in both, which *is* a waste of
> bandwidth.

Crossposted articles are not sent more than once, nor do they take up more disk space (a link is used for multiple copies), so the computer related waste is virtually negligible. News distribution software is a bit smarter than that (the common UNIX versions, at least).

There can be waste in terms of people's time, if articles are grossly misplaced.

It occurs to me that this should be a fairly easy feature to implement in a newsreader : Mark any cross-posted articles as read in all newsgroups in which it appears (or maybe only the ones that you are subscribed to). Hmmm, it makes so much sense that it has probably been done already :-).

Try calling 1-800-535-4290 (D&P Computers) and ask for their catalog-on-disk.
It is quite nifty. They have many hundreds of entries in a special database
program (allows you to do keyword searches on various fields). So, their
catalog is cool too (though in a different way)! Also, they seem to be
able to order just about anything that is still made/available. On the
down side, their prices are a bit high IMHO. It is definitely the case
that they can sell you more software than Toad can, as Toad does not
special-order stuff (in general). The D&P list has to be seen to be
believed, it is huge. The catalog is free. I find it useful to look up
programs whose names I cannot exactly remember, or for obtaining fairly
obscure programs.

I am not connected with them in any way, other than as a satisfied customer.

Have you seen the speed of Connect?? Blimey, talk about slow or what. With FDT the text just screams onto the screen. And that's at 8mhz!

>> And mostly used by teenagers....

This probably isn't what you were looking for, but I'll throw it in anyway. With the Atari market in the state it is currently in, we need to support our shareware authors as much as possible as they are virtually the only ones keep our machines going (yes I know there are still a few good commercial developers). And I don't mean just financial support. It is important to give developers feedback and sometimes even stroke their ego to encourge them to keep working on their projects. If they don't feel appreciated for what they are doing, then they will most likely tire of it and move on to something else.

You may have guessed that I am one such developer (and I use the term losely :)) who really likes to get feedback on my work. The first time I released a program for public distribution I got many letters back saying that they liked the program and could I add this or that. It was very exciting to think that my software was being used and appreciated by others that I spent many many hours improving the program just as I had been asked. Well I also decide I deserved some compensation for those many hours, so I decided to release this improved version as shareware. Though a good handfull of people did register this new version, the response was far less than what I had hoped and not even close to the feedback received on the free version. I soon realized that I wasn't going to make any money this way and my programming efforts have been so-so and just whenever I feel like it since. About the only time I get excited working on a new version or new program is when I have direct user feedback and somebody I know is looking forward to making use of my work.

So while I don't ever expect it to pay off, I do still release software as shareware 'cause I don't want to just give it away. But what I would really like as much as anything is for people to at least let me know that they like my programs and how I can make them better so they will be even more useful. And I think a good number of other developers (at least the part time hackers like myself) would appreciate the same.

671. Encounter for ST

Newsgroup: comp.sys.atari.st
Date: 1994-10-12 00:45:30 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <37fbja$t0j@mailer.fsu.edu>
Source record: 179336

I just learned that my one of my all-time favorite Atari 8bit games was released for the ST: Encounter. The ST port was done by a company called Novagen, and it was released in 1991 or so. If anyone has this game, and would be willing to sell it or trade some other software for it, please send me email. Foreign readers, don't hesistate to respond! I'd be willing to pay a bit of shipping for this game. Thanks in advance.

Encounter is a lot like Battlezone (1st person perspective tank shoot'em up game). It was the one my college dorm buddies fell for in a big way. The closest I found to it was Backlash (also by Novagen, figures). Backlash is a decent game, but there is something missing from the original Encounter, even with the much fancier graphics and sound.

From: sammcgee@crl.com
Message-ID: <37fcle$c1v@crl.crl.com>
Source record: 179337
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

In the alt.binaries.multimedia and alt.cd.(something) groups there is
talk about movies on CD-I disks in a 'standard' format compressed in MPEG.

I think the newer CD-I disks are in a ISO9660 format which Atari
computers can read but I don't know the file structure. Is the whole
movie in one file (eg. STARWARS.MPG) or is it broken into several files?

Perhaps PLAYMPEG will someday replace the PC's Reelmagic board. :)

Yes there are only 2-3 Atari firms world wide, no Agents at all
here in OZZ or NZ, and the price of a Falcon is some 3-4 times a good
PC clone...

And from what I have been seing here Atari is dumping the Falcons now,
so it looks like there will never be any more Atari support, like
TOS 5.0 or Atari Works...

Atari has been pissing people around for so long people just get fed up with
it..

>wide. How do I know???

NO THERE IS NOT, and Atari does not release figures on this, the last I ever read was 7000 in the UK....

Also from post here, Atari is now dumping these machines....

There is very little low end Home software for the Falcon and allmost nill Games, so why not tell the truth and get real...

The only software that is comming out is ether PD/DTP or Midi...

Must home users need more than that, and no 8 meg ram support...

The Suburban Chicago ATarians (SCAT) user group will hold its October meeting on Tues. Oct. 18 at 7:30 PM (7PM setup), at the College of DuPage, Room K157 (the K building is located on 22nd St. just west of Lambert Rd., in Glen Ellyn). We will watch a video of the Summer Consumer Electronics Show, and we plan to have at least one demo (perhaps MagiX on a TT....).

Everyone is welcome to attend.

For more information, send me E-Mail at one of the addresses below. [If this article shows up outside the greater Chicago area, I apologize - the "chi" distribution may not work (at all sites) now. Say, if you're travelling to the Chicago area and will be free that evening, feel free to stop by!]

Nick DiMasi, SCAT President

See if you can find Mavis Beacon Teaches Typing. This is an excellent
package. In addition to various other exercises, it shows you proper
fingering position using transparent hands over a picture of the keyboard.

Monochrome monitor in EXCELLENT shape for sale: $79 (or best offer) + shipping. If you want to make a lower bid, do it, I'll collect all and decide within a week who gets it.

684. FS: MegaSTe, SLM804 & TONS more

Newsgroup: comp.sys.atari.st
Date: 1994-10-12 05:38:56 UTC
From: mbates@netcom.com
Message-ID: <mbatesCxJp0w.Crw@netcom.com>
Source record: 179261

HOOOOOOOkay, here goes, there is tons of STuff here. Prices do NOT
include shipping BUT are all open to "Best Offers" Everything works AND
is in GREAT shape but I would like a Powerbook Duo so it is going bye-bye.
Feel free to offer anything!

Mega STe 4 TOS 2.06 w/ 50 MB internal HD. Great shape $550
1040 ST TOS 1.2 DSDD drive (internal) $100
SC1224 (goldstar but controls are in front) $75
SM124 with screen expanded $75
PS3000 (JVC color monitor with built-in DSDD) lmtd production $200
SLM804 Laser Printer w/ extra toner kit and all sftwre/manuals $400
Spectre GCr w/ ROMs & software $150
90 MB HD with Atari interface Plug & Play $150
IB 5.25" drive $35
Talon OmniSwitch (monitor/multisynch/drive) $25
Calamus 1.09n and ver 2 $45
Mouse Master $15
ICD Link I HD interface w/ software $75
ExtenDOS 1.11 $15
SpeedoGDOS v4 & AtariWorks $75
GEMini CD-ROM $25
Populous I $15
SimCity $15
Dungeon Master & Chaos Strikes Back $25
Talon SuperCharger Hardware IBM Emulator w/ docs & softwr $100
Falcon/Operation CounterStrike/Operation FireFight $25
Star Fleet I $18
NeoDesk 3 $15
RoboKIT w/ software allows you to control motor thru cart port $35
Adaptec 4000a MFM to SCSI converter $40

I also have a TON of ST books and software if you are interested just
ask. I would also consider some sort of package offer at a reduced price.

Checked the FAQ and couldn't seem to find this so . . .

A writer friend of mine who has been working for years on an Atari ST has just bought a Mac (Quadra 605) and is keen to get her files transfered to her new machine. Does anyone have any suggestions on how this could best be handled?

Thanks muchly for your valuable time.

TOS 1.2 does need the patch, in fact TOS 1.2 is full of bugs in more way than one...

>
>I've always been under the impression that TOS 1.2 was one of the (few) TOS
>versions that handled RTS/CTS flow control properly...am I mistaken?

RTS/CTS Flow control, well if you don't upload then it does no matter, flow control is only used when you upload and the Data going to the modem is farster than the line rate....

Hi,

I'm using a PAK3/030 (PAK ~ Prozzessor Austausch Karte = english: processor exchange card -> pec ;-))

It's a card with an 68030, optional fpu, 32 kb chache, an a 32 bit access to the TOS-ROMs on board. The cpu is running on my board with 42 MHz, a few net fellows tuned their cards up to over 50 MHz. A fast RAM extension is in development. For further details contact the german distibutor,

>What can the Falcon *really* do that an ST can't ???

The only really *unique* feature on the Falcon is the DSP/sound
system. That is why there doesn't need to be a Falcon-specific group,
but there could be a need for subgroups on graphics, sound,
programming, etc.

Well, I intend to get a SIMM board for the Falcon and wop me 4meg SIMMS that are currently sitting in my STE in that. Plonk the original 4 256K SIMMS back in the STE and flog it off.

>The other problem is the lack of hard drive. At least you have a high

Already got a SCSI+Link, so sell the Link and buy a SCS2 cable...

It's certainly a lot cheaper than the original price of 600 smackers for 1meg machine. Anyone notice that in the same issue there is 1meg Falcons advertised (can't remember which advert) for 299 pounds (though I think this is a misprint... :-)

The EGEM library comes with a makefile for lattice, but requires the
lattice MiNT library as well to compile.

DULIB (my own creation) works with Lattice (5.52 +) or GNU C.
If you want the above, mail me (I've not written any real docs
yet so it hasn't recieved a general release). I've also done a
version for HiSoft Basic if anyone doesn't like Ofir's Library :)

Craig.

|> >????????? (SuperNOVA)
|>
|> ATI Mach32 2 Megabyte VRAM
|>
|> Btw, the box and the drivers are not for sale separately Jonal..
|>

It might be understandable that the box and the drivers aren't sold
seperately - then probably thousands of ATARI users would buy the
box and the drivers from Lexicor/Computerinsel and the PC cards from
a PC retailer at realistic, affordable price.

But fact is that currently, the average ATARI user cannot afford a
very common graphics card like a VGA ET-4000 W32 which actually
doesn't cost more than 150$ or even less, just because of the
price policy of the ATARI graphics cards vendors.

Neither is the NOVA adaptor and the driver software sold seperately
at an affordable price, nor is the price for the entire system reduced.
And nobody seems to realize that with a much lower price, sales could
increase dramatically so that the overall profit is the same as before
(ever heard of a mass market)? But with the effect that a lot more ATARI
users are satisfied with the capabilities of their machines and do not
change their computer platform.

Regards,

Christoph

Individual ATARI ST Hardware/Software items FOR SALE:

--- H a r d w a r e ---

Atari ST 520 + P.S. + mouse (no monitor or drive) - best offer
--------------------------

Master 3S DSDD 3.5" external floppy drive & P.S. - $50
-----------------------------------------------

Monitor Master - $15
--------------
o Push button switching between color & mono monitors.
o Video & Audio RCA output jacks for VCR, TV, or sound system.

ComputerEyes Color Video Digitizer - $80
---------------------------------
o Color video digitizer saves to DEGAS format, BUT I'm also including:
o DIGISPEC.ACC: 512-color conversion of CE raw output saves to SPECTRUM.
o RAW2RAW.PRG: converts CE raw files (192 Kbytes) into True Color RAW format.
These are viewable with PCHROME.PRG in STE Photochrome Mode, and
displays 19,000 colors out of 32,768 (15-bit color) on STE's.

>>SPECIAL: Buy the above CE+Digispec+Raw2raw AND Spectrum 512 w/Unispec - $100

Canon BJ-200 inkjet printer - $175
---------------------------
o 360x360 dpi - 1 year old - works great - prints superb graphics too.
o BJ10, Epson LQ, IBM Proprinter emulations.
o Works with tons of ST software, including Pagestream, Cubase, STraight Fax,
GEM-View, IdeaList, Degas, screendumpers, etc.
o Has built in fonts and supports downloadable fonts.

LogiKhron Clock Module (for cartridge port) + software & lithium bat. - $15
----------------------

Dead SM124 Monochrome Monitor (I think it's the xformer or P.S.) - make offer
--------------------

Dead SM1224 Color Monitor [Goldstar] (flyback left the nest!) - make offer
-------------------------

--- S o f t w a r e ---

CUBASE SCORE 2.0 + dongle + manuals - all for $225.
---------------------------------
o Many >>new<< features added since 3.1 including:
o Obviously, improved Scoring, way beyond v3.1
```

o 128 tracks total (up to 31 tracks viewable in one editor at a time)
o Improved program performance in terms of speed
o All open editors follow song in real-time
o New, enhanced file selector module made for Cubase
o More free modules including Arrpegiator, General MIDI, and SysEX modules
o New "3-D" Mixer Maps with many improvements and new features
o New Groove Editor holds 64 grooves of ANY length
o Tons more - too much to mention!

Studio Module & Cuetrax Module (for CUBASE) - bundled - $100

Studio Module is a Librarian that loads into Cubase 3.0, 3.1, Cubase Score and Cubase Audio Falcon to load and:
o display all sounds of each keyboard, module, drum, and MIDI F/X device. Your total library now viewable in chart format within Cubase!
o Automatically renames Parts for you and inserts Bank & Program Changes!
o Features TOTAL RECALL of all your SYSEX dumps for everysong, or, if you already have all the correct sounds, offers name-only support of all voices.
o Supports 360, Akai, Alesis, ART, BIT, Casio, Digitech, DMC, EMU, Kawai, KMX, Korg, Kurzweil, LExicon, Oberheim, Peavy, Roland, Sequential, Voyetra, Waldorf, Yamaha, Zoom, and Generic and Universal drivers, plus you can author your own drivers using Dmaker.

Cuetrax is a graphical Mastertrack replacement Edit Module.
o Displays tempo as editable graphic
o Featuring time as SMPTE, frames, 16 & 35mm film, and 1/1000 seconds.
o Metered and time based graphic "hitpoints".
o "Fit" time feature added.
o Original mastertrack preserved & improved to display various time formats.

> Special: I will bundle this WITH Cubase Score 2.0 for $300

DigiDesign's Sound Designer - 16-bit sample editing - (payed $300) - $75

Supports many samplers, including Sample Dump Standard. Perform EQ, crossfades, loops, Fast Fourier Transform analysis and display, cut/paste + hand-draw, etc. Samples transfered via MIDI. Unlimited file/edit size (uses Hard Drive or floppies for "virtual" memory buffer).

SPECTRUM 512 Paint Program + UNISPEC + DIGISPEC + manuals - $30

This includes the oroginal SPECTRUM 512 & bound manual plus:
o UNISPEC.ACC, program & manual - many more features including Screen memory stealing & capture from other programs you traditionally can not save!
o DIGISPEC.ACC and program - GIF to SPECTRUM convertor and image processor.
o DIGISPEC.ACC and UNISPEC.ACC allow you to pass your picture to a suite of applications for rapid processing, thus combining many graphics features from many programs into a seamless session.
o UNISPEC also performs the most amazing SPECTRUM to DEGAS conversions using user-defined dithering and color pallete control.
o UNIPSEC has superior dithering and image processing features lacking in SPECTRUM 512.

More Software:
----
* NeoDesk 3.03 + bags of clever icons! - $15
* ICD CleanUp! ST - also includes a special version that supports up to 500+
Meg BGM partitions! (only works with ICD Link) - $10
* Degas Elite & truckloads of fonts - $10
* Antic's Flash 1.61 + Shadow (background transfers) - $15
* Hybrid Arts EZ-Track 20 track MIDI recorder - $5
* DMJ GIF Version 3.0 GIF to Spectrum/Degas processor + manual - $5
* Michtron TuneUp! Hard Drive optimiser - $5
* CZ Android - editor/librarian/generator for CZ-101, CZ-1, CZ-1000 - $15
* ProCopy - $5
* Atari STE "BASIC" Language program + manual - $10

Make offers via e-mail to: dunham_scott@htc.honeywell.com

700. The BBS Directory - FOR SALE

Newsgroup: comp.sys.atari.st
Date: 1994-10-12 11:44:43 UTC
From: mkw1@unix.brighton.ac.uk
Message-ID: <1994Oct12.114443.5457@unix.brighton.ac.uk>
Source record: 179280

The BBS Directory is still available from the author!

* Rated 85% in ST Format
* Rated four Star in Atari ST Review
* Over 620 UK Bulletin Boards listed
* Over 780 UK codes STD codes known and locations placed on a UK map
for easy location
* Cuts your phone bill by enabling you to search for local BBS's
* Can save search results and place them into popular comms softwares
dialing directories.
* Prints out BBS's directories for reference
* Extra information available on most boards
* Code de-coder and much more!

* ONLY FIVE POUNDS STERLING! *

Interested? Then mail mkw1@brighton.ac.uk for more information!

I have an idea. How about if we, instead of comp.sys.atari.falcon, create
a group called comp.sys.atari.030 for all atari systems containing the 68030
Motorola? This would include Falcon, TT, PAK 030 accelerators and even
medusa....

I have evaluated Alois Febler's game World Conquest (a world war type strategy game). I wanted to register for the latest version, but I cannot get a reply to my e-mail.

Does anybody know if Alois (e-mail = hubba@ezinfo.vmsmail.ethz.ch) is still around, or involved with the ST scene ?

I believe there may be some registered users in Northern Europe (according to the readme file); anybody got any ideas?

Regards

Not true, I'm afraid - C is lower level and therefore potentially much
faster than either Pascal or GFA (especially interpreted GFA). But if you
don't write well optimised C code, then it could be slower.

> Then you are not looking in the right place!!! The demos I have that I'd
> recommend are:-

:) I regularly scour German and French FTP sites for new demos. Unfortunately
most of them are either non-impressive or technically impressive whilst
not looking very impressive IYSWIM.

> 1) Are You Experienced by EKO - superb DSP effects, light sourced 3D
> space battles, stunning plasma fire effect and real-time Cybermorph fly by.

Got that one. Wasn't too impressed by the space battle (frame rate too low)
and it doesn't like my VGA monitor much. Plasma effect was good though.

> 2) Cycedelic Knockout by the Mugwumps - There really isn't anything close

The intro sequence is fun to watch, but this could easily have been done
on an STE - it doesn't show off the Falcon.

> 3) Weltscmerz by Avena (sorry for bad spelling) - a very shocking but

Basic stills and flashy text - again not showing off the Falcon.

> 4) Strange Circumstances by New Trend - some very nice and clever effects
> make this a worthy demo to watch a few times, but not in the 'top' league.

This one is better, it has effects that look good, look fast and is
professionally presented.

> 5) Autowashen Verbooten by Lazer - 6.5meg of pure, unadulaterated demo,
> 15 mins of non-stop mind blowing effects. morphing. vectors. great
> music. clever and colourful effects. The one that no-one should be

Got this one and was vaguely disappointed after all the hype. The vector
graphic frame rates are too low for it to look good. The 'Lanix' section
at the beginning is plain boring. Some of the effects look good.

One you might like to look at that impressed me was Xperience. (get it from
ftp.cnam.fr). Now this was very impressive, high speed fast updating effects
synchronised to the music. Includes amongst other things, very fast gourad
shaded vector graphics, texture mapping with various extra effects, and to
top it all a real-time fractal zoom on the mandelbrot which is texture mapped
onto each face of a rotating cube! Try that one on an amiga...
Only downside to this demo is a _very_ poor vector graphic sequence at the

end.

> I can name a _lot_ more if you like, I think I'll compile a
> falcon.demo.faq soon as my PD library seems to be overflowing with the

Please do, any I haven't got I can go and have a look at. I really wish
a group would code a demo with all the good effects in and none of the
bad - something you can run to show off the machine without having to say
well this bits crap, but in 6 minutes time it does a good effect...

:-)

Of course, the Medusa would need to be in comp.sys.atari.040 or maybe
even .060 when that version comes out.

I thought the show was great, so I'll probably go to the one in London later this year as well!!! Seriously, there was so much enthusiasm there I really didn't care about what all my PC owning friends say about Ataris.....

I was one of the ones with an advance order for ChromaStudio 24, but Dave Encill of Titan Designs said I'd be getting a copy of Apex Media instead - the Bristol show was the first time I'd seen it running and quite frankly I was amazed!!!!

714. Posting Binaries in c.s.a.s.

Newsgroup: comp.sys.atari.st
Date: 1994-10-12 16:24:56 UTC
From: hutch@ilmen.lanl.gov
Message-ID: <9410121533.AA08567@ilmen.lanl.gov>
Source record: 179288

First of all, this is just a REQUEST, OK?
=======

It's not a whine, a bitch, a gripe, a complaint, or a whinge... just
a polite request for everyone to consider (or ignore). Whew! ;-)

If at all possible, please do not post huge encoded binary files to
comp.sys.atari.st or any other newsgroup except those especially
intended for such files (such as .sources or .binaries).

You are not 'supposed' to post those files here anyway according to
the 'net rules of use' (call them guidelines, if you wish). Why?
For a number of reasons. First of these is that your encoded file
may have a limited audience. Not everyone might be interested in
it. In this case, posting a notice that said file is available in
the .sources group or emailing it to interested individuals would
be more appropriate and waste less of that proverbial bandwidth.

Secondly, some folks have to pay out of their own pocket for access
to the Usenet. Depending on their newsreader, they may have no choice
as to which post to read/download or no indication of how large a
given post is. Obviously, they won't be particularly pleased to d/l
a huge binary post that they don't care about in the first place.

Lastly, some may not have access to uudecoding/binhex utilties so
even if they have the file, they can't do anything with it anyway.

Personally, I have no problem with encoded files here (especially
short files of general interest) as I can just skip over them if
they don't interest me. But not all users are so fortunate. Your
future consideration on their behalf would surely be appreciated.

And once again, this is just a REQUEST for those who might not be
aware of the situation some users are faced with. And as with all
things on the nets, you are still free to make your own choices. :)

Thanks,

-Hutch- @ Fair Dinkum Tech

>
>Yeah, you've got it exactly right. Probably the reason TOAD is so popular
>here in the US is that they've got their own catalog, and no other Atari
>dealer does.

Well, they are not the ONLY US Atari dealer with a catalog, but I dare say they are probably the largest and most well known. Toad has been around for many years, having grown tremendously from their initial establishment as a hard drive supplier. They have managed to survive in a market where most of their competitors have fallen short or shut down. And while they still suffer growing pains, I venture to say that there are a lot more _satisfied_ Toad customers than angry ones out there.

And to top it all off, their catalogs are informative, even humorous. Dave and Jennifer Troy are two of the nicest folks you'll ever meet and long-time partner, Ray Mitchell, is a tech wizard.

Which reminds me... for those who can make it, they hold an annual ToadFest event each year at their store near Baltimore, Maryland with free booths for developers, door prizes, contests, etc. This year's event is 3 & 4 December so if possible, go check it out. You'll meet local developers, have access to many specials, and may walk away with a free prize. They also raffled off a Jaguar last year to benefit a local charity. See? I told you they were nice folks! :)

716. Virtual memory on Atari ST with MC68010

Newsgroup: comp.sys.atari.st
Date: 1994-10-12 16:55:34 UTC
From: Sole@EMBL-Hamburg.DE
Message-ID: <37h4e6$mdp@dscomsa.desy.de>
Source record: 179289

Hi,

I own an Atari STFM with 1Mb memory (sic) and I would like to work with it in a 3 to 4 Mb memory environment without spending a lot of money (it's difficult to justify a big investment on such machine).

I've read the 68010 is like a 68000 but it can support virtual memory. Does anybody know how one can take the 68010 advantages on an atari ST? Would be possible to run the Spectre emulator with it?

Do I have any other way ? -on the Macs with a 68030 the operative system takes care of virtual memory -

Thank you for your help.

Armando

Cross-posted to: comp.sys.arari.8bit,comp.sys.atari.st,misc.forsale,seattle.forsale,pnw.forsale,mccaw.forsale

I have the followin for sale

Atari 800 8 bit b revs
1050 disk drive
850 interface
830 (300 baud modem)
Comstar 160 bps 9 pin printer (very close to epson compat)
Mono Monitor.
Plus all cables and a power strip if you want it.

Software
Tons including the following with manuals

Action programing language
Polly Parot (sound digitizer)
Music composition pakage (can't remeber the name)
Mail order monsters
Speller checker from antic mag

Fansastic starter package. Still a great computer with new software
still being written, or write you own with the award winning "Action"
langauge, worth $60 all by it's self.

All for $250 including shipping or $200 if you pick up in Seattle

Contact George Constantine at George.Constantine@mccaw.com

or call 206-828-2384 W 9-5 PST
206-771-5251 H after 6pm PST

719. Re: comp.sys.atari.falcon ?

Newsgroup: comp.sys.atari.st
Date: 1994-10-12 17:41:02 UTC
From: baldrick@terminator.rs.itd.umich.edu
Message-ID: <37h73e$ic6@terminator.rs.itd.umich.edu>
Source record: 179297

I wouldn't say that the Falcon isn't an ST. In a way it depends
on what monitor you have. When I was running with a 1224 it seemed like
an STe+, but now that I have a multisync it's a whole new world.

There are a number of good reasons to create a Falcon owners group.

1. TOS 4.0x has it's own peculiar bugs that can be a pain to
figure out.

2. There is alot of new Falcon specific software coming out now.
And this would give us a place to discuss it without confusing
someone who is new to the net and just has an ST.

3. Why not maus net supports one. Who cares if it doens't get 200+
messages a day.

4. It gets hard to spot different subjects when you go through
comp.sys.atari.st. I usually only read my news once every
three days (gotta work sometime ;)) so when I come in
there is always a plethora of new messages. When you scan
down through the topic list its very easy to miss something
you could help people with or would want to know. A falcon
specific newsgroup would help falcon owners through our common
problems. We do have an abandoned machine after all ;)

Since the discussion seems to be implying a moderated (to some
extent) newgroup, cross posters could be dealt with.

One last thought if all else fails. Lets just start an alt
newsgroup. No where near as hard to get as a comp.sys group. And it
shouldn't be that hard to get sites to pick it up as it shouldn't ever
get to the point of costing much money or space.

Just my thoughts.

Friends,

Having sold my old 520-ST and picked up a Falcon, I noticed
that a percentage of my ST programs do not run on the Falcon.

Anyone have the scoop on this?

In perticular, I have alot of old, but good, programs
written in the BASIC that came with the 520-ST (vintage-'86),
but I can not get it to run.

Any ideas? Patches? Useable BASICs out there for cheap? ideas?

thanks,

Victor White

>Hmm. My mono moniter makes a slight high-pitched noise if there's no ST
>signal going through it... I wasn't worried until now! (gulp)

Don't panic.

My SM124 eeks and squieks like it's going to explode when I press RESET on the computer. It started doing so somewhere in 1986, and it's still up and running.

722. Re: 1.44 MB with TOS 1.4?

>a switch between the divider

Forget it. That's mere bullsh*t.

Any TOS will read and write 1.44 MB disks. You just need a (stock PC style) HD drive with auto-detection of disk type, and a hardware HD modification that switches the floppy controller chip from DD to HD when required. For extra reliability you might want to replace the WD1772 floppy controller chip with an Atari C302096-001A "AJAX" chip.

From TOS 2.05 onward, there is support for non-autoswitching drives, but this needs even more (and non-available) hardware. This hardware is included in Mega STE, TT and Falcon.
The only useful feature here is the "High Density" button in the "Format Disk" dialog box, which isn't there in TOS 1.x.

bye, Peter

723. Re: SPeedo 5 and NVDI query

>this can't be correct!! 8-o Also, is NVDI 3 likely to be upgraded in the
>very near future for SPeedo 5 compatibility ?

NVDI 3 will have Speedo and TrueType font scaling built in as well as a GDOS.
So the only reason for using SpeedoGDOS 5 on top of it is that NVDI 3 doesn't
have an Adobe Type 1 font scaler.

bye, Peter

724. Re: Dodgy DMA Chip Number

Newsgroup: comp.sys.atari.st

From: Peter_Missel@m4.maus.de
Message-ID: <199410122037.a32006@m4.maus.de>
Source record: 179295

>Can someone please post the number found on DODGY DMA chips please - I
>saw it a few days ago but forgot to note it down.

There are no DMA chips that are dodgy "by number".

The problem is that only two types of DMA chip work properly in STEs and TTs
for fast hard drives, with the bad news being that early 1040 STEs didn't have
these chips yet.

The "good" chips for STE and TT machines are C398739-001A (DIL) and C398789-001
(PLCC). All others are "no-good".

bye, Peter

This had me puzzled too. Eventually I decided to check the manual and
it really is there! I had totally forgotten about this feature - or
never realized it was there in the first place. I find this quite
often happens with a piece of moderately complex software. One may use
the manual quite a bit when starting out, but once you get the hang of
it the manual gets put aside. It's often an eye-opener to go back to
the manual just to see what else is in there!

728. AtariWorks / CDROM software for sale

Newsgroup: comp.sys.atari.st
Date: 1994-10-12 20:26:07 UTC
From: davidli@ogre.labmed.umn.edu
Message-ID: <DAVIDLI.94Oct12152608@ogre.labmed.umn.edu>
Source record: 179300

I have a copy of AtariWorks (with SpeedoGDOS) that I wish to sell. I am asking $75 postpaid.

I also have an ICD AdSCSI+ adapter card, ExtenDOS 1.21 and the Gemini Atari CD-ROM which I would like to sell, at a price of $30 for the card, $10 for the software and $15 for the CD-ROM.
(Or get all three for only $45...) Prices are postpaid.

Reply via e-mail please.

: I tried to mail you but I got delivery faliures

Email sent to 'requiem@armory.com' shouldn't bounce at all.

: How much is it to join the FOG ?

I'd recommend getting issue 6 of our magazine via FTP and then seeing what you think. Issue 7 is out soon and will have even more details, the most current Pd listing, etc...

: And what exactly do you get apart from PD software ?

The magazine direct, but if you have FTP access it isn't worth joining, the PD library only charges a pound a disk (members only) and has over 179 disks in its collection. But if you are an avid FTP'er then chances are you'll not benefit from this. I'd recommend getting issue 7 when it appears (Nov 1st) and then decide. I'd be happy to advise you then.

730. Black Scorpians/Apex/Dextrous News.

Newsgroup: comp.sys.atari.st
Date: 1994-10-12 20:36:44 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <941012Z203644.902dbrewood@nest.demon.co.uk>
Source record: 179226

```
Msg #51 / 1-54 Time: 12 Oct 94 20:17:54
From: Daron Brewood
To : All
Subj: Black Scorpians - Hot News!
---------[N.FALCON.MISC]-------------------------------------------
Latest news from the Black Scorpians (12/10/94)
==============================================

* Apex Media - Manual 95ompleted.
- Program 100ompleted.
- Release now very close, looking at mid-to-end of November.
- Next week the Scorpians fly over to Germany to record a
3 minute TV demonstration about Apex. He's not sure how
the clip will be used, but in some sort of computer
'news and latest technology' program. More details when
he gets back (with a tape of the recording - maybe
possible to FLX this and send it out over the net if the
Scorpians will allow it). [HOT NEWS - Scorpians have no
objections to this being done, but warn uit may be a big
file].

* BSS Debug - Black Scorpians 68030 Debugger now on sale.
- Contact Titan Designs.
- As used to develop Apex Media & Dextrous.
- The team are currently adding in source level debugging for
'C'
programmers.

* Impro - Video titling software for use with Titan Designs
genlocking hardware.
- Now being completed.

* Dextrous - Development continuing.
- Kernal of code completed.
- Work on GUI continuing, windows and sliders appearing.
- Speed in 256 colours, faster than a standard Falcon in
16 colours (running NVDI) is confirmed.

* Demo's - Apex Media - a demo program has been produced for press
review purposes. However no release is planned out into
the networks at this time. I have suggested that the
demo is released after Apex has been on sale for a few
weeks. The suggestion was taken well, so may be taken up.
- Falcon demo's. They 'lost demos' haev been found and
will definately be posted down to me soon, hopefully
before the german trip. Some of these can not be
```

released over the nets, and some are RGB only. However
the team will let me know which I can send into NeST,
and Hensa.

* NeST Ad's - Adverts for the above will hopefully soon be appearing
within NeST (Network ST's) comercial advertisement
message echo, with prices and availability. It's a good
possibility that NeST users will get slightly discounted
prices.

If anyone has any queries concerning availability of the programs, or
wants to place an order, then please contact david Encill at Titan
Designs. Remember I'm only a beta tester with hot info and news, and
you can't buy the program from me!

Probably the best bet is to get one of the 'backwards' apps for the
Falcon. Take a peek in any a.a.u.e mirror, under Falcon somewhere,
there is a file, forget what its called, but something like BACK*.TOS
(I think its a self-extracting archive). It offers a lot of switches
to help older 'nastier' programs run on the Falcon: turn down the
CPU and blitter speed, change memory access, turn off cache, and
the like...

I havent used it all that much, but I have had a little bit of luck
with it. None of my old ST games would work, tho. Not a big loss,
since I didnt have that many to begin with!

(btw: I thought that the old ST Basic came with the Falcon? I cant
find my distribution disks, so dont hold me)

I'm posting this for a friend in New York who doesn't currently have net access...

520 ST upgraded to 1 meg *** SLIGHTLY FLAKEY ***

- he thinks a chip just needs to be reset in it's socket

mono monitor

2 disk drives

1200 baud modem

good 9-pin printer

all cables, some software, etc...

Best (or only) offer received by Sunday 10/16 gets it.
Buyer pays shipping, or if you're in the New York city area, a pickup can be arranged. Either send an offer to this account (and I'll forward it to him) or call him at (718)-372-7440.

Ask for Vern.

I'll second this. Maybe we need a comp.sys.atari.030 group. That would
cover the PAK3 users as well.

Like it or not, the Falcon *is* very closely aligned to the ST and TT. If
Falcon owners really want to go off into a huddle on their own - then so
be it, but note - when a Falcon owner asks a question here - its not *just*
Falcon owners who answer.

Roland.

Different processor, different TOS...

Try Backwards (v2.22 is, I think, the current one). This program tries (and succeeds pretty well, from what I've heard) to emulate the older TOSes.

I am afraid not, however the policy has always been to upgrade the unit
for the cost of the difference of the unit + shipping, at least with
Lexicor Software Corporation.

>her new machine. Does anyone have any suggestions on how this could best
>be handled?

Your friend should have a copy of the Mac program "Access PC" (a must have).
This allows Macs to read PC-disks. Now if you format a floppy on a ST with TOS
1.4 or up, the Mac will be able to read this floppy. If she has TOS <1.4, you
should dig up some formatting utility from a.a.u.e that will allow you to
format PC-compatible disks.
I have a Mac and ST standing next to each other on my desk, and I drag files up
and down this way every day.

Minor additional problem: if you save a plain (ASCII) text file on the ST, all
lines will end in CR/LF, whereas the Mac only uses CR -- which means that upon
opening a ST text file on the Mac, every line will begin with an annoying LF
character. Solution: preform a search/replace on the Mac, or find a utility
that strips all linefeeds from a textfile (I think I have such a beastie
somewhere on my HD...).

>was called comp.sys.atari then perhaps it would be better, but it isn't.

Yeah, sure, what am I doing here anyway, I have a TT........
So let's vote for an 'comp.sys.atari' with no extensions attached !

Suppose you have a ST, you are happlily reading all sorts things in your
'comp.sys.atari.st' area and things are starting to dry up, you will never
know anything about the truly amazing other Atari's because no one is
posting anything about it in 'c.s.a.ST'
Result, you throw away your ST and buy a PC.....

>
>Ivo

A few years ago (when I still had a ST instead of a TT) I 'upgraded' my SH204 with a Seagate ST296N. I removed the Adaptec board and the ST225 and put in the ST296N, connected the flatcable from the ACSI board to the drive and formatted the whole bunch with AHDI. Although the drive ran fine, I couldn't get the thing to autoboot... So I was forced to leave a floppy with the AHDI driver in the floppy drive. After a couple of months I replaced the ACSI adapter with a SCSI adapter from the German magazine 'CT'..... The system autobooted just fine with this SCSI adapter, I could even set the interleave to '1' which seemed to be quite special for a ST296N (small buffer), with the SH204 board the interleave had to be set to '2' to get a 'decent' throughput. So I guess it's just going to be some 'trial and error'...

746. Alternate desktops with TOS 2.xx and greater

Newsgroup: comp.sys.atari.st
Date: 1994-10-13 00:38:38 UTC
From: azog@world.std.com
Message-ID: <CxL5sE.CxF@world.std.com>
Source record: 179215

I am just curious as to who uses replacement desktops, with a TOS of 2.06 and up, and why?

I used to have an STe with 1.62, and purchased NeoDesk 3.2 for it, and for this version, NeoDesk was great. I had tried an older version of Gemini (sp?) but was not fond of it.

Soon, I replaced the 1.62 with 2.06, and had all or most of the features of NeoDesk in that: desktop icons, and other nifties. Now I am running a Falcon with 4.04, and I am seeing that NeoDesk 4 has been released, and am wondering if I should spend my money on the upgrade from 3>4? What will NeoDesk 4 give me that I dont have with TOS 4? Dont say 'multitasking', cause I use MTOS, and am quite happy with that. Altho, I shouldnt judge MagX or whatever its called, since I havent used it.

I am the kind of person who really hates having all these 'layered' things on top of everything, its a holdover from days gone by when machines had less than 64k, and you needed all the memory you can spare. But, now with a 14mb Falcon, I can start practicing the abhorrant PC style of, 'who cares? Ive got 16mb'.

Now, I am not putting anything like NeoDesk or Gemini down, but want to see what other folks opinions are, and waht these things will give me that I dont have already

Well, I dont think .030 is a good name, as others have said, since
Medusa has an 040, and it seems that 040 options exist for the Falcon.
A nice politically correct name is in order :-)

With system 7 (undoubtedly on this person's Mac), you just stick a PC
disk in and it works. No additional software is necessary.

> Now if you format a floppy on a ST with TOS
> 1.4 or up, the Mac will be able to read this floppy.

If she would like to "PC-ize" existing disks, DC Format can write MSDOS
compatible bootsectors to disks (available on atari.archive.umich.edu in
/Utilities/Dc/dcfmt302.lzh). The disks must have been formatted with
80 tracks, 9 sectors per track (this is the standard desktop format, er,
format).

> If she has TOS <1.4, you
> should dig up some formatting utility from a.a.u.e that will allow you to

I have had best results from ps2form.tos, in /Diskutils on a.a.u.e.

Source record: 179234

Hello!

I am a novice on computers and I have a question for more
experienced users about printers. I went to the store to buy a printer
for my ST. I also thought that any printer will work on any computer....
Apparently not. I found the exact same printers, one made for PC's and
others made for MACS. When I asked which printer to buy for an Atari
the salesman responded, "I don't think they make atari computers anymore."

In short, I need to know how to choose a printer for my Atari.

Thanks in advance,

Jeff Healey

Basically, you can use almost any printer on the atari, apart from Mac
ones sice they're usually machine specific.

Just get yoursel an Atari printer cable. Most software comes with a wide
range of printer drivers. If yours is not directly supported, most
likely another driver will work just as well. For example, for Calamas S
DTP software does not provide a driver for the Star 24pin colour printer
- I use the Canon bubblejet colour printer driver with perfect results.

It's easy really....

Steven

: the salesman responded, "I don't think they make atari computers anymore."

: In short, I need to know how to choose a printer for my Atari.

First you want to look at what you want the printer for, ie, home use, home office use, DTP, just for the ocasional letter, etc.

Now once you have decided what you want if for, then you dedcide what type would best suit the task, ie, laser, 24-pin, inkjet, etc.

Once you have decided that then you can decide on the make and, more importantly, the price.

Many printers work on the Atari computers, I have a Star 24 pin (LC24 200), Hewlett Packard printers work, Citizen, Cannon, and many others. So being able to find a printer to match what you want should be no trouble, and these days you can find a driver for almost all printers.

Hope this helps a little

Andy

I've changed my mind about having comp.sys.atari.falcon. I now say NO.
Two reasons. Quite a bit of the stuff on comp.sys.atari.st is of interest
and
I would still have to read it. Also, if we had anew group, I would have
to ask
our system administrator to take it, which he might not want to do.

During the recent messages about the current state of Heat and Serve C, somebody mentioned a Gemfast v2.0. I'd like to know if it's available via ftp or whatever. If the source code is available that would be quite good as well.

Thanks in anticipation.

Stuart.

773. Gemini 2 English .RSC

Newsgroup: comp.sys.atari.st
Date: 1994-10-13 11:37:15 UTC
From: sbrown@cee.hw.ac.uk
Message-ID: <CxM0A4.BEn@cee.hw.ac.uk>
Source record: 179164

I'm currently converting (for my own use) the GEMINI.RSC file with the package from German to English. What I would like to know is that once I have completed the conversion, would I be able to upload it to ftp sites? If the authors have no objection, I'd like to.

However, this is not nearly as good as a complete English conversion. The alerts still come up in German and the shell commands still have German messages and manual pages. But the menu bar and the dialogues connected are in English.

If I am allowed to, I expect to upload the new .RSC file within the next week or so.

Stuart.

P.S. It really is an excellent piece of software - the built in console window is superb. Throw away Gulam and get this!

You need an IBM- or Epson-compatible printer. The Macintosh uses a
different (and generally more "intelligent") method of communicating between
computer and printer, so you would need a special hardware adapter. It
wouldn't be worth the extra cost.

> whatever, only a Laserjet (which is compatible anyway). Is the driver
> which I select at installation patched into Speedo as default or something?
If you bought Speedo 4.x you have a DJ5.SYS

With speedo 5.0 you have...
DJ550C	11.10.93	68870	Speedo 5.0		n		LS,SPD,TT,T1
DJ_550C2	14.04.94	68746	Speedo 5.0		n		LS,SPD,TT,T1
DJ_500C	14.04.94	68761	Speedo 5.0		n		LS,SPD,TT,T1
DJ_510	17.05.94	61921	Speedo 5.0		n		LS,SPD,TT,T1
DJ_510T	17.05.94	61925	Speedo 5.0		n		LS,SPD,TT,T1

Speedo writes the info in your ASSIGN.SYS.

I don't agree. I always have MagiC running on my ST. I regularly can continue with my comms program, text editing, word processing, dtp, whilst letting the computer get on with downloading/archiving/compiling etc.

I would not be without MagiC, although I agree MagiCdesk is nothing to get excited about.

BTW: I do all this comfortably with a 2.5Mb STFM!

I believe the parallel printer port on the Atari is completely compatible with the equivalent parallel printer port on PCs (both are based on the Centronics parallel interface). I bought an Olivetti ink-jet printer with parallel port and an ordinary parallel cable which would be used to connect the same printer to a PC. It works. I think most modern parallel printers would work equally well.

However, not all parallel printers will work with the ST using a stock printer cable. My previous printer, a Silver-Reed EXP550 daisy-wheel printer, did not work with the ST. Even though the EXP550 printer is from the same era as my ST (1983 vs 1985), I think it uses slightly different signal timing conventions than the true Centronics interface specifications (Maybe someone else can correct me on the difference between the EXP550 interface and the Centronics interface?).

The only restriction: you need a centronics port (that's usually "made for PC")

The rest is a question of price and quality.

>price for me for the upgrade from 2.5 to 3 yet because they did not have
>any in stock.

In Germany the upgrade from NVDI 2.5 to 3 costs 50 DM + shipping. So I'd say you should expect something about 20-30 pounds. I was in the UK two weeks ago and the exchange rate was 1 pound = 2.38 DM then (that's what my VISA-receipt tells me). I hope this helps.

I wasn't criticising you, but the things you were saying which
considering they were quite inaccurate wasn't so wrong of me.
When I realised you had purchased a Falcon all those months ago and were
coding for it I was really pleased that there were some fine coders on
the machine. And then when I approached you with the demo idea, the
one time I called upon your services, because I have always admired your
work on the ST (Decade demo etc.), you let me down completely and then
have the gaul to post messages like you did. It's like having a famous
hero/TV star who turns out to be a real git when you finally meet them or
something. And you expect me to be able to take your post in a light
hearted manner? Considering there were a few rather 'vital' details left
out I find that hard to do.

> havent used it.

Multitasking is a not a desktop feature, but one offered my the operating system. MultiTOS and MagiX are both options to that end. We publish our own multitasking environment, called Geneva. Its main advantages are speed and compatibility with older applications.

NeoDesk 4 has a number of new features over the previous version, which include (but are not limited to):

- Background file operations (with or without a multitasking environment)
- Background disk operations (same as previous)
- Compatible with standard multitasking environments (Geneva, MagiX, MultiTOS)
- Window specific commands are now located in window based menus
- New icon editor with support for reading Windows icon files
- Ability to read most picture formats on the desktop
- Support for GDOS and SpeedoGDOS fonts (windows, desktop, etc)
- Most previous limits have been eliminated
- Customizable 3D look (release 002)
- Groups (special grouping icons that let you group multiple related items)
- Program Information file (a set of parameters for running a program that also serves as an alias for the original file)
- Built-in, online, context-sensitive hypertext help system.
- All dialogs can be displayed in windows, allowing access to different dialogs at the same time.

792. Re: Hardware for Falcon

Newsgroup: comp.sys.atari.st
Date: 1994-10-13 16:02:07 UTC
From: peseb@freeport.uwasa.fi
Message-ID: <37jllv$d4u@zippo.uwasa.fi>
Source record: 179111

Yes!
A DSP-modem with ISDN and upgrade capabilities would be
needed for the Falcon, and as for marketing, I doubt that
the little piece of Hardware between The DSP-port and phone jack
could be too expensive to make that the whole thing would become
not-worthwhile.
Make It, Atleast I'll bey it. :)

-Von

Opps...bey=Buy.

Ps. Roland, How Do You Then Propose to make the Atari Range
More Profitable If Not with new Hardware/Software/Newsgroups?
I for one think that one of the greatest advantage the Falcon has
has is All The hardware it has as Standard, ie. LocalTalk-Lan,
SCSI-II, Analogue & Digital Joystick Contr. etc.
(We Actually Found That A PC-clone (This Compared with a
386dx/40 !!) with all the stuff the Falcon has would cost
Atleast 2/3 more then the Falcon. If We could also offer a
cheap upgradable DSP ISDN modem, maybe even include it in
standard packages, then the Falcon would once again be a
more attractive buy.

Ps. Roland, Get A PC. You Seem to think that the Atari's are long
dead anyway.

Can anyone out there help me with a recursive file/directory search routine in GFA basic - I've got the right algorythms, but FSNEXT doesn't seem to work properly.

I won't start posting code yet 'cos it'll probably annoy people, but help would be grateful... Thanks

Also, I've done an ST-Guide (excellent prog.) version of the GFA Basic 3.5 command reference detailing all the commands and their syntax. If anyone wants it, then please mail me...

Thanks

|> Anyone care to translate that announcement and post it here?

Well, there hasn't been a 'real' announcement. The person who does the main work (Thomas Tempelmann) mentioned a possible MagiC for Mac after the MacWorldExpo in Frankfurt/Germany. Now he's answering quite a lot of questions about it...

Here's a little summary of what I can remember of (sorry, I'm not at home right now, where I could just run my MausNet-Newsreader to give more details):

As mentioned above, the Atari emulator will be a modified version of MagiC. If you insert an Atari disk and double click an Atari program the emulator will run it automatically. Cut/Copy/Paste to the Mac clipboard could be possible, and there's going to be a solution for the right mouse-button problem (additional key to be pressed on the keyboard or even a driver for a mouse with 3 buttons).
MacMagic will run co-operatively with the Mac-OS and presumably switching between Mac and Atari applications will be no problem.
As it seems, a first version has been shown at the MacWorldExpo and many people asked when it would be available. There were lots of questions whether Calamus will run on it, even from Mac-only-users.

That's all I remember. I hope it makes you as excited as me.

Andre

PS: How much costs a second hand Apple Powerbook with a 68040 inside? I like the idea of my own portable Atari...

This game looks very impressive indeed. My only gripe with it is that the up and down controls are backwards from the way I feel a first-person flying game should be: pulling back on the stick should bring the ship up, not down. Otherwise, no complaints at all-- very impressive indeed. I look forward to the game's release.

You won't be able to profit from the 68010 because for virtual memory in the
sense of swapping pages out to disk you need a chip with a PMMU (Paged
memory management unit), i. e. a 68030.

It shouldn't work! I beta tested the fix for GST. It works OK-ish but
doesn't really support Speedo properly. Speedo fonts just appear as normal
GDOS fonts with a range of fixed pitches. Apart from that it was fine.
Obviously not enough cash in it to make it worth GSTs time releasing it
- I believe the beta only came about because people on CIX discussed it
and told GST what to change.

Source record: 179169

Hello Atarians.

I think I have a major problem. I don't know whether its a bad power supply, a nasty virus, or a voltage surge problem from the electrical outlet. Here's my setup:

- Atari STe <TOS 1.6>
- XT case with Maxtor 345Mb SCSI & ICD AdSCSI+
- Magnavox Professional series colour monitor

Here's the problem:

I get a voltage surge <or something> which causes the screen to blank first <with accompanying high "tweek" when the screen blanks>. Next, after perhaps 2 seconds, the drive & computer reboot. When it reboots, I get 4 bombs in low resolution across the screen. I have tried running programs with the HD off as well, and I still have the same problems <so presumeably its not the HD power supply>. I have also waited perhaps a minute or so to let the RAM clear, just in case its a virus. So I feel that its either the monitor or the power supply in the STe itself. Any suggestions?

Thank you very much in advance!

Pascal Calarco

I agree. If the tunnel sequence is representative of the rest of
the game, Stardust will set a new standard for what to expect from STE
games! The demo hunk is excellent (sdtunnel.lzh on atari.archive). Anyone
with an STE should keep this around just to show off the machine.

As for the controls, I would really like to see that particular portion
of the game have a mouse option. It could be sort of like Super Space
Harrier :-).

The one Insignia have is for TOS, not Unix. Atari are being less than
helpful. Atari in the UK reckon it's a waste of time trying as Atari US
will need to check the contract with their lawyers which takes time and
money for something they will get no revenue for.

> Not sure who it was here who was trying to get it released. I wish
> you luck and hopefully this info will help you out.
If anyone knows of an email address for *anyone* moderately high up Atari
US, can they mail it to me please. Otherwise the PD release of SoftPC is
dead in the water c/o Atari US.

811. Who is working on MiNT?

Newsgroup: comp.sys.atari.st
Date: 1994-10-13 21:58:29 UTC
From: flinn@cs.ubc.ca
Message-ID: <37kai5INN5n8@carib.cs.ubc.ca>
Source record: 179187

The only version of MiNT I have used is 0.95, since I haven't the necessary tools or resources to compile a 1.x version. My dimming recollection tells me that this version was produced directly by Eric Smith, before he began work in Sunnyvale.

Since then I have heard two related rumours: Eric is now working on Jaguar things, and a binary distribution of some new version of MiNT or a MiNT based MultiTos (version 1.10?) is planned. Does anyone know who is making these plans, or who is continuing to develop MiNT or MiNT derivatives?

Thanks in advance for whatever you can tell me/us.

Does anyone have any nice 2.5" drives for placement in a Falcon?
The cheaper and bigger the better! (well, that's kinda obvious isn't it)
Anyway, does anyone have any used drives for sale?

Never seen Towers myself. IMO compatible GFA programs can be written if you write them properly, like any language really. Applying that GFA_patch thing looks to be a great aid in this department (replacing a lot of the nasty calls with legal ones).

: >In regards to my earlier post, above, I got a really nasty (and very
: >childish) email flame from James Baumgardner <jbaumgar@bronze.coil.com>
: >which suggested I get a 'real term program' or 'feign computer literacy'
: >and not to 'whine' about my 'inadequacies.'

: Hi there. Since you are obviously not civilized enough to restrict
: E-mail conversations to E-mail, I have no qualms about raking you over
: the coals in public. I must apologize to the denizens of the net who are
: reading this, but Hutch (that's right, Hutch <hutch@ilmen.lanl.gov>)
: decided that he prefers whining in a public forum rather than dealing with
: criticism in a constructive manner.

It seems that he is being most productive. You are arguing against
common sense, which gives you little credibility among UNIX people.

: Hutch, I merely suggested that you should not expect a flow of 100+
: messages a day from thousands of people world-wide to conform to
: standards that suit your purpose. Certainly, you provide a great service
: to G*nie and the customers therein. But isn't it bad enough that G*nie
: charges for free information without you asking for that information to
: be pre-processed at OUR expense?

It's not pre-processed that he's asking for. He's asking people to hit
return at the end of the physical line. Not too difficult unless your
return key doesn't work.

: I suggest that if you want to continue providing this service for G*nie
: customers, you should be inconvenienced. A `real term program' or `one
: than can handle >80 columns/line and/or LFs rather than CR/LFs,' to quote
: my own message, would easily fix your problem. When you replied and
: stated that you had a SUN w/ a 21" monitor, I seriously could find no
: reason for your concern. Even a modest programmer such as myself could
: write a little GFA program in five or six minutes that could word-wrap to
: 80 columns and convert LFs to CR/LFs. With all of the resources
: available to you that you had mentioned, there is NO POSSIBLE WAY that
: unformatted postings could be a problem to you.

There is NO POSSIBLE WAY that properly formatting posts should be a problem for you. It requires less effort for people to follow the rules than for him to process every unformatted message, program or not.

And it's not just him. It's ALL of us! I have yet to find a newsreader that didn't really screw up when it got improperly formatted messages. When a message is just slightly too widely formatted, I hate to read it, and when it's not formatted at all, I can't read it.

Just format your messages. Why is it such a difficult concept for so many people?

: I can't fix your problems. Occasionally, though, I'm inclined to help.
: However, when I see someone who whines, cannot back up his whines with a
: logical argument, is too lazy to perform even the most rudimentary of
: text manipulation, and when questioned is forced to twist the facts and
: whine in public, I find myself devoid of pity.

He didn't ask you to fix his problems. He asked EVERYONE to format their messages properly. His arguement is perfectly logical, and it is not our fault that you can't see it.

Format your messages properly.

From you, all I see is someone who whines because he can't perform even the simplest text formatting by hitting his return key when he's supposed to. You are too lazy to perform even the most rudimentary of text manipulation, and therefore I find myself devoid of pity.

: At this point, I must turn the soapbox off. I suggest you do the same,
: and in future, I certainly hope that you are mature enough to keep E-mail
: discussions where they belong.

You obviously know little of maturity.

> Does anybody know how one can take the 68010 advantages on an atari ST?
> Would be possible to run the Spectre emulator with it?
>

According to my docs, the 68010 is identical to the 68000 physically, and
its instruction set is a superset of the 68000, so you should be able to
plug one in and use it as normal. The exception processing commands are
apparently the same as for the 68020 (& 68030), so virtual memory software
for those processors just might work (I wouldn't be positive).

> Do I have any other way ? -on the Macs with a 68030 the operative system
> takes care of virtual memory -

The Mac operating system from the start (with a 68000) sort of supports
virtual memory, in that only part of a program is loaded into memory at
a time. The Atari OS doesn't support this (unless a specific program
can load pieces of itself). Real virtual memory (ie., it looks like
there's more memory than there really is) on Macs didn't come along until
System 7, and I'm not sure (I'm sure I'll be corrected), but I think even
then virtual memory requires an 030. But since Spectre still can't
handle System 7.....(Dave? You out there Dave?)....

Yes, version 2.0 is available on GEnie as well as BIX. 2.0 is not
necessarily buggy, it's just never been fully tested. (I uploaded it at
these sites for Ian.) Full source code is included, as well as
documentation. However, the docs right now are only in Word Perfect
format. I plan on doing a conversion to text output fairly soon and when
I do, that too will be uploaded both to GEnie and BIX.

Basically because Atari decided on some pretty (IMHO) stupid design
limitations. The worst one is the 16-bit bus (though the
video-in-main-RAM comes in a close second)...

> Another thing Atari stuffed up on, I think the Jag will be next...

I'm hoping it's not. We'll see in the next three-four months though.

> We can't even get PAL Jags here....

You might want to wait 'til it's _released_; the Jag is still (amazingly
enough) still in limited release. The only real excuse for this is the
lack of games; they really need to light a torch under some of those
developers (or possibly under production).

Yat Siu (ysiu@lexicor.com) wrote:

: Proposal for a new newsgroup
: Request for Discussion: comp.sys.atari.programmer

: by: Yat Siu (Lexicor@world.std.com)
: ----------------------------------

: Group name: comp.sys.atari.programmer
: Status: unmoderated (ysiu@lexicor.com)
: Distribution: world-wide
: Summary: a newsgroup for the discussion of programming on the atari
: TOS or 8bit computer and any clones or otherwise

: Justification:

: There are currently several comp.sys.atari.* newsgroups, however
: none cover the aspect of programming questions. Atari Computer systems
: (8bit, 16 or 32bit and clones) have various development tools from other
: third party developers, some of which are very good. Atari Users require
: a forum where they can ask questions about programming in any language.

: This new newsgroup is also meant to encourage programming on the
: atari and asking questions regarding programming. Very often programming
: questions are asked in other forums, but they either don't get a reply or
: ignored because it is not related to the topic. Atari Computers have got
: a user base of programmers who need to support each other on the usenet on
: a more global scale, and it should also help third party developers for
: atari development tools read and see what programmers use/require/want.

: Charter:

: The proposed group will provide a forum for the discussion of
: programming queries, discussions of techniques or anything else that is
: related to programming on the atari for any language that exist on the
: atari (scheme, gcc, c, basic, pascal, assembler etc.)

: NOTE

: This RFD is being issued in concordance with the guidelines set in the
: "How to create a new usenet newsgroup" FAQ regularly posted to
: news.announce.newgroups. Please refer to this article if you have any
: questions about the newsgroup creation.

: Unless the discussion indicated a need to resubmit a new RFD, the CFV will
: be posted approximately three to four weeks after the posting of this RFD.

: This RFD was (cross)-posted to the following groups:
: news.announce.newgroups, news.groups, comp.sys.atari.st,
: comp.sys.atari.8bit, comp.sys.atari.announce and mailed to the gem-list
: and lexicor-list

--
I'm all for it !!!

It's a well needed newsgroup.

Hi Iain,

I didn't really expect to find this when I logged on tonight, but as long as I'm here....<grin>

Perhaps the thing that is confusing is if you're doing a PD release of SoftPC, I don't understand why you need Atari to do _anything_ related to the product! This should be no different than any other 3rd party product that is being sold for the ST. Lord knows there are plenty of things that have been produced by developers that were not registered developers. The only thing that I can think of that might require Atari's approval is a TOS license. But since you're going to be running DOS on a TOS machine, even that should not be an issue.

Atari UK always liked to blame Atari US for their problems. :-) The real issue is probably that they don't want to spend any time on a PD program, which is somewhat understandable.

If you'd like an email address for someone high up at Atari, try this one:

75300.3443@compuserve.com

That's Sam Tramiel. Can't guarantee that he'll answer, or what answer you'll get. But there's an address to use. Have fun.

And as for the rest of you....please don't fill up Sam's mailbox with flames. We've been trying to get him more active online for years, and he's finally sneaking out a bit. So be kind!

Best regards,

Bob Brodie

Thanks for the info, Andre. Keep us posted on any new developments of this product you might hear about, OK?

>PS: How much costs a second hand Apple Powerbook with a 68040 inside? I like the idea of my own portable Atari...

Well, Apple 040-powered notebooks (aka, 'BlackBird') have just hit the streets so they bring a premium price right now and used ones will be scarce. One of the better deals on the portable Apple units is the Duo 230. This is the lightweight (4.4 pound) unit with no internal floppy, active matrix greyscale screen and a 33MHz 030 (fpu-less, I think). I've seen it new in catalogs for $995 and it can probably be had for less with a little shopping. In contrast, the active matrix color 040 PowerBooks are around $4000, I think. Ouch! :)

>Does anyone have any nice 2.5" drives for placement in a Falcon?
>The cheaper and bigger the better! (well, that's kinda obvious isn't it)
>Anyway, does anyone have any used drives for sale?

Hmmm... used 2.5" drives will probably be a bit hard to find in this forum. Unfortunately, 2.5" units bring a premium price compared to their larger 3.5" cousins.

You can shop around, but some of the best prices I've seen for new 2.5" SCSI Quantum units are from LaCie (a popular Mac vendor) at 800-999-1283:

170Mb $229
256Mb $299
340Mb $379
514Mb $499

835. Re: PLEASE! Restrict posts to 80 columns!

Newsgroup: comp.sys.atari.st
Date: 1994-10-14 10:28:37 UTC
From: thed@mtek.chalmers.se
Message-ID: <37lmgl$s63@nyheter.chalmers.se>
Source record: 179107

I'd _like_ all newsreaders to format the text for the reader. That way one can write whole paragraphs without pressing return and they will look good on all screens, even if they only have 20 columns.

But:
Most (all?) newsreaders just prints the text as it was written by the author and some even screws up the text if one line exceeds X characters.

So if I and others who don't like being restricted to 80 columns wants our texts to be read by the great public, we have to adapt outselfs.

If that's not a reason good enough, there are news rules, and as always, if you don't follow the rules, you'll make people angry with you.

So until most of the newsreaders are rewritten and the rules have changed, adapt yourselfs. If you think this subject is really important to you, contact the creators of the newsreaders and explain your point of view.

I don't think that writing texts the way you like and then when you receive complaints by the readers, you tell _them_ your point of view, will ever make a differece.

I don't like this restriction either but that's the way it is...

Kind regards,
Ted Lyngmo

Hello all ...

I currently use a Mega ST4 for MIDI sequencing, synced to a PowerMac 6100 for hard disk recording. On the ST side I run Dr.T's Omega II because it has a lot of MIDI tools included with it. I also have an older version of X-oR, I think v1.1. X-oR is great, but I don't have profiles for my Yamaha SY77 and TG33, and my ART SGX2000 (mondo cool effects box). Does anyone know where I can get these? Also, does anyone have the KMX/Ensoniq 15x16 MIDI patchbay for sale? I would _love_ to get one of these things.

John

I need some help with a Priam 330mb SCSI hard disk.
I have connected it up to my Falcon and it powers up OK.
However when it gets to SCSI 0 it says unit not responding still. (the drive does click a couple of times when it says this)

I think the problem is that it is set to the wrong SCSI id number, but I can't tell how to change it! There are no obvious switches on the drives except for a row of ten jumpers next to the SCSI connector.

I have looked through lots of adverts to find a company selling Priam drives, to see if they can help, but I can't find any...

The drive is formatted for a PC at the moment. This shouldn't matter should it? (as far as recognizing the drive, obviously I will have to reformat it to use it)

Thanks for any help,
Phil

I need a program that will run on an intell box (I don't care what OS, DOS/WINDOWS/OS2/NT) that will convert an Atari ST Degas *.PI1 picture format to something I can read on an IBM (ie PCX, BMP, GIF, whatever).

I know there was an intell based program called OPTIKS that just might do the trick, but I don't know where to find it. The reason I need this is to convert a bunch of *.PI1 bitmaps to the intel for I game I wrote on the ST that I'm porting to OS/2 (I'm using the new DIVE API's in Warp II). If I still had access to my ST, I'd simply convert them to GIF's using the myriad of graphics converters native to the Atari, but I don't, so I need a PC version to do it. Any help would be MUCHLY appreciated. Also, Atari FTP site listings could be a help. Thanks......

Hi Peter,

Your friend will have to format some 3&1/2 disks to the IBM (standard)
720K type format (an STe will do this standard or yse Fastcopy III or
Maxifile etc.

Then if the Mac was not supplied with the PC Exchange software package
they will have to purchase it.

Copy the files onto the MSDOS formated disks(720K). Then use PC Exchange
to import them on to the Mac.

Seeyoulatermate.

Does anyone know how the 68K Mac version of MagiC will compare to a stock
Atari? Is if faster than a 520? Faster than a TT030? Off hand, I would
guess that it wouldn't be any faster than a 520, and probably slower. If
this is the case, the next thing to ask is: when will there be a
PowerPC-native version?

Thanks,
Tom

There are a couple of things in ST-Format I find extremely annoying, and I don't think I'm the only one... It'd be great, if you could at least discuss these subjects at STF, and maybe (?) hopefully improve the mag.

1) STF's Falcon support is poor =-(I don't know whether it's because of those kids not wanting to read about "how great Falcon is", as they "only have 520 STs and that's the way they like it.." - but STW _very_ seldom bothers to tell readers e.g. if some game (or utility on cover disk) works on F-030, or not... And (especially when speaking of ST-games!) it would be very nice to tell Falcon-owners, if the game reviewed works on Falcon with BACKWARDS ST-emulator - and if yes, with which settings...

It seems like STF is trying to please ST-using kids?

2) A little more professional touch would be welcome; screenshots from word processors or spreadsheets taken in ST-med rez look horrible... They make Atari look like a toy; an old games computer. Which it isn't at all.

3) Why does STF ignore "the rest of the world" ? In STF's point of view, there doesn't exist other Atari programs than those available in U.K. So, many great German and U.S programs and hardware are simply totally forgotten. Has STF mentioned that there are 256 greytone hand scanners available for ST..? It it has, I have missed it. How about networks, other graphics cards than Crazy Dots, Falcon accelerators, ... Etc. ?

It really sometimes feels like many STF reviewers don't _know_ that there is such really professional Atari life existing somewhere..? What about great Calamus SL, and Atari DTP?

What I really mean, is this: maybe the majority of STF reader is kids using old 520 STFM hardware - but wouldn't it be smart to TELL them that there is the

serious side in Atari, too..? Because now they think: "ok - this is a toy. When I grow big I'll buy a REAL computer, say a PC...".

I really feel that STF doesn't consider Atari much more than a beginners computer - and after readers get older, they change the machine and start subscribing PC Format.. ;-) ?

Don't you agree?

I think, mags like STF _SHOULD_ push Falcon ahead with all their might, because the future of Atari computing is in Falcon and those (hopefully) future Atari compatible computers. Not in ST or STE - whether kids like it or not.

Generally, I find the level of British Atari mags pretty low; I can't help it. There are far too many clear errors in expert articles, and the tone is both over-merry and "surrendered" at the same time.

Please, don't think I want to "insult" you personally. Instead, I'd be very glad to see STF, ST-User and the like improve, and become as good Atari magazines as e.g. excellent German ST-Computer. So, I hope this nasty criticism helps to make the world a bit better place.. =-) !

Any comments very welcome!

Tommi

> format).
>
My standard technique has been to format the disks on the Mac (in IBM
format), then just use them in the ST. My elderly macII (actually
think it's as old as my ST) seemed to have problems with most anything
formatted on the ST. The ST seems happy with whatever I feed it.

OK. I have a few packages of original SW with docs that I'd like to sell.
These prices are quoted in U.S. dollars, and include shipping. Please
make an alternate offer if you find the prices too high.

Diamond Edge version 1.10: Excellent floppy and hard disk
diagnostics/repair/utilities. Highly reccomended $40.00

Heimdall: Graphic adventure, norse mythology, very good. 5 disks!
$20.00

PC Ditto SW version, emulates IBM XT, slow, but it works. $5.00

Dragon's Breath: arcade/strategy game of conquest $10.00

Rings of Medusa: medieval trade/war/gambling game. $10.00

Please reply in email. Don't let these great deals pass you by!

I've come up with a problem with creating postscript files in Calligrapher,
and then trying to print them on my university's laser printers. Therefore
I wondered if any of you could help me with this problem.

I create a test document in Calligrapher, save it as a .ps file fine also.
Next I port it onto my Unix machine at university, to allow myself to print
the .ps file. For good measure I do a "dos2unix" on it to get rid of all those
horrible ^M 's off the end of the lines.

I then do "lpr -Pruskin testfile.ps" (ruskin is a laser printer) and a few
mins later I get very polite mail from a printer daemon saying that
"testfile.ps" is not a postscript file, when it definitely is. I tried to
get help from the facilities here, but they didn't do any good at all.

Thanks for any help you may have.

Well, Apple 040-powered notebooks (aka, 'BlackBird') have just hit the streets so they bring a premium price right now and used ones will be scarce. One of thebetter deals on the portable Apple units is the Duo 230. This is the lightweight(4.4 pound) unit with no internal floppy, active matrix greyscale screen and a33MHz 030 (fpu-less, I think). I've seen it new in catalogs for $995 and it canprobably be had for less with a little shopping. In contrast, the active matrixcolor 040 PowerBooks are around $4000, I think. Ouch! :)

Hmmm... used 2.5" drives will probably be a bit hard to find in this forum. Unfortunately, 2.5" units bring a premium price compared to their larger 3.5" cousins.

You can shop around, but some of the best prices I've seen for new 2.5" SCSI Quantum units are from LaCie (a popular Mac vendor) at 800-999-1283:

170Mb $229
256Mb $299
340Mb $379
514Mb $499

>Does anyone have any nice 2.5" drives for placement in a Falcon?
>The cheaper and bigger the better! (well, that's kinda obvious isn't it)
>Anyway, does anyone have any used drives for sale?

Hmmm... used 2.5" drives will probably be a bit hard to find in this forum. Unfortunately, 2.5" units bring a premium price compared to their larger 3.5" cousins.

You can shop around, but some of the best prices I've seen for new 2.5" SCSI Quantum units are from LaCie (a popular Mac vendor) at 800-999-1283:

170Mb $229
256Mb $299
340Mb $379
514Mb $499

You just comment out the line "GEM=GEM.SYS" in your mint.cnf. MultiTos really is in the GEM.SYS-file with the ability to run GEM-programs concurrently. You can use the version available at a.a. I run MiNT 1.11h2 with and without MiNT and it works much better than earlier versions and is faster too. Some GEM programs that crashed when using earlier versions of MiNT now works like a charm...

From: cb170@city.ac.uk (HALL B J)

It occurred to me that while many programmers out there are writing what they want, they is a substantial amount of non-programmers who would like specialist applications.

I was wondering if it may be a good idea to get together a list of programs wanted by people, and have some programmers voluteering to do one on the list.

OK, it may not work, but anyway...

Programs I'd like to see:

Calamus .CFN Program - finds and fixes damaged fonts : I'm working on
Mono bitmap editor that can simulate changing brightness (through dithers)
WWW Browser
More mono games

Erm.. can't think of any more at the mo'. Any ideas...

Source record: 179063

Hello frends,

I bought in septemper a Falcon 030 with 4 MB RAM and a 120 HD. Now i have troubles with the Prg Touch-up version 1.84. With my (old) Mega ST 4 this progamm was running without any problems.

The programm starts without errors and i have no problems working with it, that means with al kinds of pictures. But at the moment i try to scan a new picture (With a handscanner from "Alfa Data") mij copm. including the prg. is stuck (it gives no bombs) and i can only reset the system with the button at the back of the computer.

Has anyone of you had the same troubles, or now anyone of you a solution for this problem.

If my Englisch is not to good (your Kings Language) i am sorry.

Please replay and manny thanks.

Greatings Joop Jongsten.

Steve,

several things, the first being that technical does not imply
programming (never has). The biggest problem, if you've been following some
of the posts in the past, people don't like it (many) if you post code on
*tech or such related questions.

The nature of code is also often annoying to those who don't want
to be involved with it. Also programmer will promote programming questions
which tech or any other atari newsgroup does not. It probably won't be a
high volume newsgroup, but while we're on this topic. The subject matter
discussed in *programmer will more than likely be DISTINCTLY different than
those in any other newsgroup for atari i.e. no danger for cross postings.

While one may argue the validity or not for *falcon or *0x0 or
whatever (I won't go into that yet), the gap for programming questions,
support or otherwise is quite obvious, and if you don't want to read it,
you don't have to, and there will more than likely be no danger for you to
miss out on anything fancy either :) re: announcements, hardware or software
questions.

Also more importantly, with the passing of gem-standard guides on
the gem-list, a forum more publicly available and less problematic on your
private mailbox is required to help support the new guide.

Cheers

Yat @ Lexicor

From: wells_s@ix.wcc.govt.nz
Message-ID: <37mm2b$rlc@golem.wcc.govt.nz>
Source record: 179071

] Did you turn off background file operations in NeoDesk 4? NeoDesk 4's file
] operations should be faster than version 3 (they are basically the same
] code cleaned up).

Background copying on an ST? No way! I'm using dialogs instead of
windows, so there's _no_ backgrounding whatsoever!

] Two things. First, you should look at the new release 002 of NeoDesk. We
] just released a patch for it. It has some substancial improvements in
] memory management. I will be posting it on the Internet in the next day or
] two. Second, you should check your Memory Configuration. With the wrong
] setting here, you can substancially increase your memory fragmentation
] (NeoDesk 3 didn't offer this level of control.)

I usually limit it to 300K at all times. v002 seems to just about
eliminate the fragmentation problems other than with the Icon-editor.

If running programs doesn't cause fragmentation, then why not make
the icon editor an external program & run it seperately? It might solve
problems. (Remember the days of Neodesk 2? :)

I haven't tried no-limit setting yet with the new version....

] > Hopefully the problems can be fixed. Neodesk 4 doesn't like copying
] > large amounts of files to/from floppies... It tends to crash (Neodesk
] > v3.04 doesn't). Memory fragmentation... Speed....
]
] We haven't experienced this, but maybe you ran into some other unrelated
] problem that made it seemed that the copying was the problem. I would try
] release 002 and see if that fixes things.

I tried it on a friends Falcon, and a friends STE to see if it was my
setup, but nope... After copying a disk full of various files from A:
to the hard-drive, Neodesk 4 crashed. Does it almost without fail.

Rel' 002 seems _just about_ bugless now, as long as Geneva is being
used. Other than the icon-editor, there's no noticable problems (apart
from the annoying code-depacking on bootup delay)

897. Font

Newsgroup: comp.sys.atari.st
Date: 1994-10-14 19:28:11 UTC

Source record: 179072

Anyone know where I can get a monospaced, full-set (256 char'), VT-100 GDOS font. With 8 & 9 point settings. (NOT Speedo-GDOS, normal GDOS).

898. Re: St-Guide

Newsgroup: comp.sys.atari.st
Date: 1994-10-14 19:34:04 UTC
From: wells_s@ix.wcc.govt.nz
Message-ID: <37mmfc$rlc@golem.wcc.govt.nz>
Source record: 179073

] You can get the latest english version from micros.hensa.ac.uk but I
] am not sure which directory. There is an advantage to using ST-Guide
] documents, even with a good text-file viewer. ST-Guide is for online
] documentation. Text file viewers are general purpose utilities for
] any type of text you might need to look at... You would not want to
] read an entire manual in HyperText, because you would quickly get lost
] in the links (if you are a curious soul like me). By the same token,
] though, you would not want to look for a specific piece of information
] in a text-only document, since it can be a pain-staking process. In
] this case, you want the information yesterday, not tomorrow.

This is what Geneva and a good text-viewer is for! :) If you're a speed-
user like me (as much as one can be on an 8Mhz system), then I'm after
as much normal-GEM avoidance as possible. I want dialogs, not windows,
and decent scrolling.... (How _does_ Tempus do it? :)

BTW guys, Geneva & Neodesk 4 work great under Double-Screen or MonSTer!
(1280*960*4 :)

What annoys me is the fact that people package virtually identical
hypertext & asciitext documents in the same file, and if you pay for
what you get, this is a waste, and it also wastes time while you download
the extra bit of info'... Either one or the other, not both!

899. RFD: comp.sys.atari.programmer

```
Proposal for a new newsgroup
Request for Discussion: comp.sys.atari.programmer

by: Yat Siu (lexicor@world.std.com)
-----------------------------------

Group name: comp.sys.atari.programmer
Status: unmoderated
Distribution: world-wide
Summary: a newsgroup for the discussion of programming on the atari
TOS or 8bit computer and any clones or otherwise

Justification:

There are currently several comp.sys.atari.* newsgroups, however
none cover the aspect of programming questions. Atari Computer systems
(8bit, 16 or 32bit and clones) have various development tools from other
third party developers, some of which are very good. Atari Users require
a forum where they can ask questions about programming in any language.

This new newsgroup is also meant to encourage programming on the
atari and asking questions regarding programming. Very often programming
questions are asked in other forums, but they either don't get a reply or
ignored because it is not related to the topic. Atari Computers have got
a user base of programmers who need to support each other on the usenet on
a more global scale, and it should also help third party developers for
atari development tools read and see what programmers use/require/want.

Charter:

The proposed group will provide a forum for the discussion of
programming queries, discussions of techniques or anything else that is
related to programming on the atari for any language that exist on the
atari (scheme, gcc, c, basic, pascal, assembler etc.)

NOTE

This RFD is being issued in concordance with the guidelines set in the
"How to create a new usenet newsgroup" FAQ regularly posted to
news.announce.newgroups. Please refer to this article if you have any
questions about the newsgroup creation.

Unless the discussion indicated a need to resubmit a new RFD, the CFV will
be posted approximately three to four weeks after the posting of this RFD.

This RFD was (cross)-posted to the following groups:
```

news.announce.newgroups, news.groups, comp.sys.atari.st,
comp.sys.atari.8bit, comp.sys.atari.announce and mailed to the gem-list
and lexicor-list

900. SAFEMENU author sought

Newsgroup: comp.sys.atari.st
Date: 1994-10-14 19:51:25 UTC
From: BYDLP@ttacs3.ttu.edu
Message-ID: <37mnft$5sq@hydra.acs.ttu.edu>
Source record: 179075

I'm looking for whoever wrote a PD CPX called SAFEMENU, which I downloaded recently from the UMich archive. (The README etc. gives no name, address, or anything.) It's a very nice routine, but unfortunately is incompatible with Notator SL V3.16, which is my main application. I'd like to communicate about the problem with the author.

Thanks. Please use the email address shown below, rather than the one in the header above.

Dave Post

I must be missing something somewhere. Common Sense. Unix People. Did I miss the smiley there? ("credibility" sends me over the top!)

This whole argument is stupid. Hutch is being extremely immature. Not about the 80 column thing -- but about specifically calling James Baumgardner out. Am I the only one who sees this as "Mommy, he was mean to me?". I don't see how this served any usefull purpose (or any purpose other than causing this useless thread). It certainly won't stop James from posting as he sees fit. I doubt that it's going to alter anyone's behavior.

And yes, I am a little miffed at myself for even posting to this inane thread. But, if we must have a flame war, let's attack the flame and not all stand around gazing at the fire, remarking on how pretty it is.

Sure. 80 columns is good. Everyone should do it. I can't see any argument here. (People shouldn't flame either, it's a "rule" just like 80 cols is.)

> There is NO POSSIBLE WAY that properly formatting posts should be a
> problem for you. It requires less effort for people to follow the rules
> than for him to process every unformatted message, program or not.

Sure, completely pass the point. Hutch says he weeds out the non-80 column posts. Now, why does he bother in weeding them out (or how)? A simple filter can run through all the posts (no human involved) and reformat any errent post. This is just as easy as finding the posts that don't fit. If I apply some common UNIX sense, I'd say expecting everyone to follow the rules is a mute point, and you should write your tool to fix the error (not just find the posts that don't fit).

For those of you who have problem reading -- I'm not advocating ignoring the 80 column netiqute. I'm just saying that Hutch _personally_ shouldn't have much problem with this. It was nice to remind people to conform, for those people stuck reading with pgms that don't handle long lines well. But, like James, I don't have one smidgen of sympathy for Hutch's problems in bringing posts over to Genie.

> You [James] obviously know little of maturity.

Well, I'm not going to disagree with that. I will say that Hutch isn't acting very mature either. Re-read Hutch's post where he mentions James. Was that mature? Why was James mentioned at all? Being on the correct side of an argument does not make you mature (and being on the wrong side doesn't make you immature). For that final does of maturity:

Hutch> Hahahaha... the 16 year old (or 15?) whiz kid is lecturing me on
Hutch> maturity. :)

This is a _really_ mature statment if I ever saw one. At least it has a smiley. Remarks connecting age and maturity are a sure indication that someone doesn't watch CSPAN.

Don't worry, I'm going home to flagelate myself over succumbing to this.

>
>And if I keep the host adaptor in it, but replace the Adaptec+drive by a
>plain SCSI drive, will it still work on a 1040STE?

Yes. A friend of mine still has my original Atari host adaptor from my SH204
and runs a Seagate 1096N (SCSI, 84 MB) on it.
You'd have to go for a drive with parity disabled, and better not try a
Fast-SCSI drive. I never tried a really modern drive on it, but it should work.
BEWARE: You have to format and partition the drive elsewhere, since that host
adaptor has a bug that prevents the drive from reporting its capacity. Using
the drive afterwards does work perfectly well, though.

bye, Peter

903. Falcon serial port

Newsgroup: comp.sys.atari.st

Disk Magazines

FaSTer: Vol. 1 No. 1 to Vol. 2 No. 5 (11 disks)
ST News: 2.1 to 4.4 (19 disks)

I'll sell all these for just $15, that's only 50 cents per disk (if you don't like them you can use them as blanks). I just thought that I'd pass these on to someone who could use them (they have demos, programming routines, etc.) rather than to just re-use them as blanks. If you're in the states, I'll even throw in Priority mail shipping (about $3 worth).

But get in touch soon, if I don't hear from anyone I'll just recycle them. And I'm interested in trading, as always.

>cross posting between atari.programmer and st.tech? There's
>my real concerns. Wayne

Wayne,

comp.sys.atari.st.tech -> discussion of atari st hardware

so there you can discuss matters of hardware, and possilby talk about low level design HOWEVER the distinction comes when you ask how do I do this in Pure C, like implementing .h files, or how or what do I need to compile mint, and presenting example code which sometimes can be very long.

Maybe you haven't seen it, but I've seen people scared off from programming questions because others said it didn't belong here. Do you get questions in *tech asking how do I do this in whatever language? Yes sometimes but it doesn't make the bulk of messages.

Technical questions in discussion of atari hardware is mainly the discussion on peripherals, and most of the time not programming internals.

The other practical issue about a group like programmer is, if you're not into programming at all you can totally ignore it, unlike a group like maybe *falcon and *st you may risk losing som valuable information if it wasn't posted in both and you requier to read another newsgroup. It should also help clarify the the borderlines of tech and programmer if it does pass.

Your concerns are very natural, and by all means please voice them because that is what the RFD (Request for Discussion is all about).

Also, the gem-list issues will need a forum to discuss and support the implementation of the new "gem" standards, and progammer would support this in incredible ways.

Does that make sense to you?

Cheers

Yat @ Lexicor

Naaa.. It sounds like a bad power supply, or more specific, a bad
solder joint(s) on the power supply board itself. I had a 1040ST
that all I had to do was look at it the wrong way and it rebooted,
after it had been on for awhile. Turned out to be bad solder joints,
more then one actually. A few minutes with the soldering iron, and
the ST was back running my BBS for over a year, and now its been
sold and is still running with NO troubles. I'd look there first
before going into a panic. (grin)

I'm curious: has anyone on the Net heard of any new developments with OMEN,
the Open Multitasking Environment)? It was officially realeased in June, and
I haven't heard much since v. 2.50d came out...

a) is there any software out that supports this new environment?
b) have any of the other platform versions been released yet?

-Jeff Boman

FOR SALE -- UPDATE
=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

Atari Mega STe
--------------
4 Meg RAM
16 mHz / cache
separate keyboard
2 Serial ports
LAN port
VME expansion slot
52 meg internal Hard Drive
TOS 2.06

Price - $550 or best offer (includes software below)

Software
--------
PageStream
WordUp
Codehead Utilities
Warp 9
Multidesk Deluxe
Compute your Roots

Lots of other stuff, including MIDI sequencers, shareware,
programming, etc. plus 2+ years of ST mags and disks from
England.

Matrix CoCo Graphics card (VME)
-------------------------------
256 colours
1 Mb VRAM
up to 1024 x 768 resolution
fully programmable/configurable
supports virtual resolutions up to 1260 x 900

works in Mega STe or TT

Price - $300

Canon Multisync monitor
-----------------------
```

14 inch
.28 dot pitch
syncs down to all ST resolutions
800x600 max resolution
works great with graphics card above

comes with multisync switchbox to give you all 3 ST resolutions
in one monitor

Price - $300

Supra 2400 baud modem

Price - $40

Panasonic KX-P1123 printer
---
24 pin dot matrix
360 x 360 dpi

with printer stand

Price - $150 obo

ICD 85 Meg HD
---
in under monitor case, room for one more drive

Price - $250

Atari SM124 mono monitor

Price - $100

927. MPEG Player version 0.68

Newsgroup: comp.sys.atari.st
Date: 1994-10-15 14:35:30 UTC
From: millert@grad.csee.usf.edu
Message-ID: <37opbi$1ld@mother.usf.edu>
Source record: 179001

This latest version of MPEG player can actually play most of my mpegs now.

But for about 50% of them, it puts my computer into some weird display mode that my multisync can't handle and all I see it a lot of flickering garbage.

I think the developer should check what kind of monitor is being used before he changes display modes.

And if it's a problem with 640x400 TC, then use a 256 color mode.

But aside from this problem, the program is coming along admirably.

930. Kermit or XYZ-Modem for 1040

Newsgroup: comp.sys.atari.st
Date: 1994-10-15 15:40:15 UTC
From: querel@jupiter
Message-ID: <37ot4v$5si@vishnu.jussieu.fr>
Source record: 179002

Hello !
I have an Atari 1040 STF with only a single floppy disk drive.
I would like to transfer files between this machine and a PC.

Floppies written with the Atari can't be read by my PC.

So, I would like to know if a transfert program does exist for the 1040STF

I suppose it exist ! But I don't know where I can find it.
Does somebody know where I can find it, or mail me an UUencoded version
of such a program (executable, I have no compiler !) to
querel@ecoledoc.ibp.fr

A
Thanks a lot !!

In article <37ot4v$5si@vishnu.jussieu.fr>, you write:
>Hello !
>I have an Atari 1040 STF with only a single floppy disk drive.
>I would like to transfer files between this machine and a PC.
>
>Floppies written with the Atari can't be read by my PC.

Floppies formatted with the Desktop "Format" option can't be read by the PC without special software (don't recall the name). If you get a program like Diamond Format, DC Format or IBMFORM and use one of these to format your disks with the "MS-DOS" compatible option, you'll have no trouble transfering files. The only difference between Atari and IBM format is the number of FAT clusters (or something like that). IBMFORM should also allow you to alter an Atari disk to MS-DOS format without losing any of the files on the disk. All of these programs are available on-line at places like Hensa and umich (and its mirrors). If you need help with the FTP addresses, let me know and I'll email you a list that someone on the net compiled.

Oh, you also have to format in standard 720kb format; no Twisted; no 10 sectors per track; etc.

>So, I would like to know if a transfert program does exist for the 1040STF

As I mentioned, it does, but I can't recall the name.

I tried sending this to you via email, and it bounced. Just so you know.

Tom

I ordered teh same drive about a year ago (less?) from LaCie. (Bad
experience, can't recommend them -- even though their prices are good.)
The parity is _enabled_ in the drive's firmware. For your ST, parity
must be _disabled_. To do this, you'll need to hook it up to a Mac and
use the Mac software to _disable_ parity.

I sent my drive back. :-\

Oh yes, they can :-)

You just have to change some bytes in the bootsector
If you immunize the disks with Protect6 (or similar anti-virus programs
that can write and IBM boot sector) you will be able to read them

> Also, Atari FTP site listings could be a help. Thanks......

Two suggestions:

1. Ftp to wuarchive.wustl.edu, go into /systems/msdos/graphics (or something like that), and search for "Degas" or "Atari" in the index file. I believe there is a program that can read Degas files, and save them in various PC formats (it might be Optiks, in fact, I cannot remember).

2. There is an X windows package called pbmplus (I think) that can convert just about anything from/to a portible bitmap. Thus, you could convert Degas to PCX with two steps. You probably need a UNIX box for this, though it has probably been ported to LINUX.

Finally, try atari.archive.umich.edu (one of several good Atari ftp sites), though I'm not sure how this will help if you don't have an ST. There is a PC program (in /Misc/st2dos.zip, or something similar) that allows you to write the correct MSDOS bootsector to ST floppies, but that's about it in terms of PC stuff, to my knowledge.

944. Re: Falcon serial port

Newsgroup: comp.sys.atari.st
Date: 1994-10-15 21:19:14 UTC
From: jtrautschold@BIX.com
Message-ID: <jtrautschold.782255954@BIX.com>
Source record: 179018

charrier@int-evry.fr (Laurent Charriere) writes:

> My Falcon's serial port will work correctly only after a reset.
> Why ? Is there a remedy ?

LC...

We're going to need a bit more information than that. What terminal program are you trying to use? Does this happen with all programs that use the serial port, or just some? You might be trying to run a program that doesn't know how to "talk" to the new serial port hardware in the Falcon. In other words, there could be all sorts of reasons.

How and where can I get some information on the Gemulator, Phone number, someone fax me some information, address of vendor?

946. ATARI SLM804 QUESTIONS

Newsgroup: comp.sys.atari.st
Date: 1994-10-15 22:24:36 UTC
From: sxp17@po.CWRU.Edu
Message-ID: <37pkr4$beq@usenet.INS.CWRU.Edu>
Source record: 179019

Hi. I just bought a used SLM804 (works wonderfully with AtariWorks).
I can't get it to work with Printmaster and Certificate Maker (old
versions). Is there a way to copy the driver from Atari Works (GDOS, too)?
Certificate Maker has xxx.PRN extensions while my present driver is
xxx.SYS.

Also, will the SLM804 work with the Falcon?

Thanks a lot!

947. Wanted/For Sale: TT RAM board...

Newsgroup: comp.sys.atari.st
Date: 1994-10-15 22:26:34 UTC
From: dud@u.washington.edu
Message-ID: <37pkuq$5a8@nntp1.u.washington.edu>
Source record: 179020

I have an Atari 4/16 meg TT RAM board in my TT030 with 4 megs in it and it's working great. I borrowed it from my Atari dealer about a year ago and have been using it since. He didn't have a TT to use it in, and he had no problem letting me borrow it nearly indefinitely.

However:

Now it has come time to part with my TT. The person who's receiving it expect 8 megs in it. My Atari dealer wants me to pay for the board now, which would be fine with me... except that he wants $400 for it (what he put into it). I don't know exactly what the board is really worth right now; $400 might be a good price. But I don't want to pay that much just so I can ship an 8 meg machine...

My Atari dealer has an Atari 4 meg TT RAM board he says he'll sell me for $250. The MMU on it doesn't work, but fortunately I've been the proud owner of a new MMU for quite some time (just sitting in it's anti-static bag).

So, if someone has a spare TT RAM board that will hold at least 4 megs (I don't care what brand) that they wouldn't mind parting with for a fair price, I'm game. Or if someone wants to buy this board for more than $400 (unlikely, I think...?), let me know!

Thanks,

Dan

948. FS: Mega 4 STe/SLM 804/ other

Newsgroup: comp.sys.atari.st

I am selling this to get a Powerbook DUO (has to be a Duo) so if you have
a Duo or a Duo Dock or Macintosh Color Monitor or Keyboard or CD-rom I am
more than willing to trade!

I still have for sale the folloing:

Mega 4 STe with TOS 2.06 52 MB internal HD $550 plus shipping OBO
SuperCharger IBM emulator w/ docs and disks $50 plus shipping
SLM804 Laser Printer w/ extra toner, manuals & disks $350 plus ship.
IB 5.25" disk drive for ST with software $25 plus ship
Spectre GCR with ROMS & software $100 plus shipping
PS3000 Atari/JVC color monitor BUILT-in DSDD disk drive! $150 plus ship OBO
1040 ST w/ TOS 1.2 $75 plus ship
Goldstar SC1224 $75 plus ship
SM 124 (expanded screen) mono monitor (will not sell until Spectre is
gone!) $50 plus ship.

ICD LINK interface with software & EXTENDOS $90 plus ship OBO

TONS of ST software and books! Ask me I probable have it for sale.
ALL of the Compute! and Abacus books are $5 each (and I have 'em ALL!)

Take it all and make me an offer!
-Marlin
OR Take it all with a trade of a Powerbook DUO

949. help with running minix on atari mega/ste

Newsgroup: comp.sys.atari.st
Date: 1994-10-15 22:44:04 UTC
From: david alan vasileff <dvasilef@blueberry.ucs.indiana.edu>
Message-ID: <1994Oct15.174410.17436@news.cs.indiana.edu>
Source record: 179022
Cross-posted to: comp.os.minix,comp.sys.atari.st

I'm having problems getting minix to run on my MegaSTe. it's version 1.1 and i can barely get it to boot reliably on my megaste more than half the time. I also can't seem to get it to recognize 720k floppies or my hard drive. (it trashed one of my hard drive partitions very nicely though) I know I can change the sources and rebuild the system, but I can't even do that with it because it crashes so much. (or doesn't boot at all).

can anybody help???

thanks,

david

950. Re: SpeedoGDOS drive question

Newsgroup: comp.sys.atari.st
Date: 1994-10-15 23:28:32 UTC
From: wells_s@ix.wcc.govt.nz
Message-ID: <37poj0$dtm@golem.wcc.govt.nz>
Source record: 179023

] When installing SpeedoGDOS from the distribution disks, you are
] asked to pick a printer driver from a popup-menu. I pick the Deskjet
] 500 driver (as I got one :-) and continue installing. But I can't
] find what Speedo does with this info, as there is no DESKJET.SYS or
] whatever, only a Laserjet (which is compatible anyway). Is the driver
] which I select at installation patched into Speedo as default or something?

If it prints, then all well and good, otherwise, just delete the current
driver #21 (Which _should_ be the laserjet drive), and stick
21 DESKJET.SYS instead, and as long as it's in the GEMSYS directory, it
should be fine! (If it isn't on the install disk, well, just use
what works! :)

951. Help!!! My keys die! (Buhuu:-()

Newsgroup: comp.sys.atari.st

Apart from the standard "open it up, clean/check/wiggle everything", I would
suggest that you remelt the solder connections that relate to the keyboard
(the connector wire attachment holes, for example). Cold solder joints
can cause weird problems like this.

> Personal mail would be fine.

A valid email address would help this immensely.

957. Atari System For Sale!

Newsgroup: comp.sys.atari.st
Date: 1994-10-16 05:29:23 UTC
From: beave@u.washington.edu
Message-ID: <37qdnj$6oc@nntp1.u.washington.edu>
Source record: 179032

As a student of a major university in the computer science department I find that I have no real use for my ST and could use the money far more so here goes nothing...

520 STFM w/2.5 Megs RAM $155.00
Atari External 720K Drive $35.00
SC1224 Color Monitor (JVC) $95.00
SC124 Monocrome Monitor (Goldstar) $75.00
Maxtor 120 Meg Hard Drive,
ICD Controller and Power Supply $155.00
Neodesk 3, ICD Utils, UIS III,
Numerous Games, PD, Blank Disks
(Will list upon request) $25.00

Total Separately: $540.00

If Sold As System: $445.00 OBO

I would really like a buyer in the Seattle area if that is possible, but since it is unlikely shipping is negotiable. I am sure it would be rather expensive. I will accept any reasonable offers (i.e. common prices on the net).

Ted White

From: mroberta@aol.com
Message-ID: <37qu3t$cg0@newsbf01.news.aol.com>
Source record: 179043

In a few months I have to sell or donate my trusty old 1040ST due to space problems. Before that sad date I have some long standing Dungeon Master questions I'd like to get answered.

1. Someone on this newsgroup once mentioned that ther are four pairs of Boots of Speed. I found the ones on Level 7, 11, and 12. Can anyone tell me where the 4th pair is (or if it really exists??).

2. My maps show a large empty area in one corner of the area for level 6. Using 'magic vision' I can see that there are corridors and monsters roaming
therein in this area. The corner is the one closest to the room where you must
time your moves through two transporter fields to get the next key. How does
one get into the hidden rea?

3. Also on level six there are two locked doors near the 'Test your strength'
area. Where is the key or keys to them?

Any other obscure trivia about the game would be appreciated.

Also, can someone suggest a charity which would want an original 1040? It has a color monitor, extra hard drive and TOS 1.0. Thanks again.

I have excactly same problem, better multisyncs are not capable of the
lower scan rates that some programs insist.

I hope that the otherwise excellent Plaympeg 0.68 would develop into
fully (colour)resolution independent, *windowed* application - with
or without dithering - and definately *with* sound support.

Most COPY-programs let you format special formats, but ONLY 9 sector,
80 tracks can be read on IBM PC's (or 18 sec if you have a HD drive)

>about what the difference is, and how tt ram compares to st ram as well
>as how it compares to the 30 pin and 72 pin simms that are common on other
>platforms. Any help to shed light on my confusion is greatly appreciated!

The difference between ST and TT RAM is the way it is accessed. The Motorola 68030 is a 32 bit chip, and the 68000 is a 16 bit chip. What this means is the 68000 can get 16 bits from the memory each clock cycle, whereas the 68030 in the TT is able to get 32 bits from the memory each clock cycle. In order to do this though, the machine has to be designed with 32 lines going to the memory (referred to as a 32 bit bus). The ST RAM in a TT only has 16 lines going to it (a 16 bit bus), so it can only be accessed 16 bits at a time. But the TT RAM has 32 lines going to it, so it can be accessed 32 bits at a time. That's why it's faster. It has nothing to do with the actual type of memory used (SIMMs, DRAMs, etc.; whatever the respective memory boards hold)... However, if you're using 30 pin SIMMs, you must have four of them to be accessed at 32 bits per clock cycle; each 30 pin SIMM can only handle 8 bits at a time. Each 72 pin SIMM, on the other hand, can handle all 32 bits at a time; that's why you can just add one 72 pin SIMM at a time instead of having to add them in sets of four like the 30 pin SIMMs. When computers come out with 64 bit busses, you'll have to add 30 pin SIMMs in sets of 8 and 72 pin SIMMs in sets of 2.

Hope this clears things up!

Dan

977. X-Control's CPX files

I am beginning to use Cubase Audio 2.0 with my Falcon. I have to external SCSI HDs, 105mg SYQuest, a Peavey SP & SX II , linked in that order. After less than a minite of audio recording I got an error message stating SCSI time out & to check my connections. I finally dicovered that if I only hook up the HD (terminated of course) everything works fine. The irony is that I also have Logic Audio and it records fine with the long SCSI chain.

The Cubase Audio manual states that "all SCSI devices should be sequencial ie 0,1,2..... BUT I just dicovered that the Falcon Manual states that AFTER the harddrives one id should be skipped before setting the rest of my devices..... Does anyone know who is right?

thanks for any help

michaelk

Yes, but I think he wanted IDE drives.

Anyway, Club Mac (800-258-2622) has some cheaper Quantum Daytona 2.5" SCSI
Drives:

256 MB $285
514 MB $469

Like Hutch said, shop around (ClubMac offers a one year waranty and LaCie
offers a 2 year warrenty.).

You can pick up a Duo 210 4/80 for $700 as well. Try MacWarehouse for the
Duo 230 (if they have any left) and MacSale International for the 210.

Neither one has an FPU (the Blackbirds don't either for that matter).
If active matrix color isn't that important, you can pick up a PB 520 for
around $2,000 (if you can find one). It does support color on an external
monitor.

Duo's don't some with some nicities like floppy drives (or most ports).
If you want those, you can pick up used 030 PB's for around $1100-$1400.
Just subscribe to misc.forsale.mac and comp.sys.mac.portables.

Errr, the Falcon uses IDE 2,5" drives NOT scsi... So buying a SCSI 2,5"
drive seems quite a waste of money to me. But then again, buying 2,5"
drives is always a waste of money compared to their 3,5" counterparts.

Advice for Philip: remove the speaker inside the Falcon and put in a 3,5"
IDE, adapter cables are produced by various manufacturers. Just check the
specs of the drive for the power requirements as the Falcon can not deliver
much current at the 12 Volt output. The Western Digital Caviar series draw
very little current at 12 Volt, only drawback is that some types will force
you to have a boot floppy in the floppy drive to initialize them at
power-up (not after reset)... At least the WD2340 does..

Ive had problems skipping device IDs. With AHDI 6.04, it seems that if
I skip ANY, the search stops at the last found. For instance, if my
first external device is #0, and I hook, say a CD-ROM player at #6,
the machine doesnt search past #1

I dunno if this is normal

Well, I am mainly interested in the performance of these cards. My
home-made ET4000 VME system is doing 'only' about 400 to 500 kbytes per
second in data transfer, this means that a screen clear in my current mode
(800x600x256) takes about 1 second... I think (hope) that this can be much
better, but it also could be 'just the performance of an ordinary ET4000'.

Why all the negatives, I thought that I was the only Negative person on the
net...

Lets try and get our act together, the Amiga people did, just have a look
at their Groups, and their PD disk libuary, (Freddy Fish) all Atari people do
is too squably all the time, then people get fed up and pull out...

Yes we do neen more groups to split things up, I also vote for a separate
hardware group, but that is not what this post was all about..

Yes Yat you have my 200% on a Programing group, when do I vote...!!!

Let try and shoot the Negative chap down with some good Positive comments..!!

990. SpeedoGDOS and CoNnect

Newsgroup: comp.sys.atari.st
Date: 1994-10-16 22:31:11 UTC
From: azog@world.std.com
Message-ID: <CxsEK0.BEu@world.std.com>
Source record: 178962

I have SpeedoGDOS, the one that comes with the Falcon, version 4 probably,
and am having a hard time getting CoNnect to recognize these fonts.
Basically, when I boot with GDOS installed, I try to select a font
in CoNnect, but all it lists are three: the system font, a monospaced
font, and one other that I forget. Even tho I have about 15 fonts installed,
and they work fine elsewhere (ie: Atari Works).

Now, the CoNnect manual states that if no GDOS is installed, CoNnect
looks in GEMSYS for fonts. This works when I boot without GDOS. But
why cant I get at GDOS fonts when GDOS is installed? Any ideas? Thanx

ST memory is shared with the video (and I believe, DMA) hardware in a "clock cycle sharing mode" (CPU cets a shot, other hardware gets a shot, repeat) This was great when the cpu was slower...

Now the TT memory can be accessed cycle after cycle by the CPU and is only limited by RAM speed and CPU speed. Starts twice as fast and can be made faster!!!

Got it? ST RAM is neccessaty for compatability, but the use of TT RAM for all but the final displayable images and DMA IO make programs fly.

Hi Y'all. Please post any answers you have to my Email address, as I don't knwo if I can keep up with the backlog in this group. I will try though.

I recently tried to install MiNt on my system, just to see if I liked it. I never got it to work properly, so for the moment at least, I want use of my 9Mb on drive F, which I had installed as a MiniX partition.

I have tried zeroing it withthe ICD driver, and even re-installing a TOS partition from the Install.prg. But all the time, I am told that it still contains about 6Mb, and looking at it with a sector editor reveals that it is still a MiniX partition.

Short of copying my entire hard disk onto floppies, formatting the drive, then copying everything back, has anyone got any idea how I can get my 9 meg back?

b> host adapter (or, ideally, an Atari MSTe internal HA)?
b>
I would suspect that the parity setting is enabled. TTBOMK all 3 of the
host adapters you mentioned require parity disabled. Check the bottom of the
drive and see if PE is jumpered or not - it should not be. I am also assumeing
that the cables are seated properly. SOME of the LPS drives will never be
recognized by the ORIGINAL ICD hostadapters, btw!

800x600 a screen clear takes 1 second? Hmmm, that's kind of tough to
compare considering it's about 1 second (anyone wanna do it with a
stopwatch?? *grin*).

Gert, I am fairly sure that it's faster than your regular ET4000 as the NOVA
Boards are tweaked and the VDI is very good, however why don't you use a
program like Ofir's gembench (btw available on every good atari ftp
site) and make some gembench results. Let's compare those results and then
we can clearly see how much better it is?

Cheers

Actually, from my understanding, this is not true. Yes, ST RAM in a TT
is used for screen memory, but that's not why it's slower. See my
previous post for more info on that...

The reason why ST RAM is in a TT is for compatability, because there are
a few programs that don't expect to be able to access RAM 32 bits at a
time; usually these programs are older and do funky things. Tempus text
editor is an example. If I understand it correctly, the 68000 has 24
address bits, 16 of which can be used for memory access (because the chip
can only handle a 16 bit data bus), but Tempus used the extra address
bits (<16) to speed up scrolling, I believe. When you try to run it on a
TT, which uses 32 bit addressing, those extra 8 bits can't be used by
Tempus and it crashes. (please correct me if I'm wrong on this)

>jc (Wishing I had a 19" monochrome TT!!!!!)

No, you wish you had a TT with a SuperNova graphics card and a 21" monitor!

:)

Yea, I get the same thing, too. The "Monospaced 821" and "Symbol
Monospaced" are (surprise) monospace fonts. And AFAIK, CoNnect will only
use GDOS fonts marked as monospace. This way, the program doesn't have to
fiddle with kerning and/or line spacing.

>unpopulated for the Atari Mega ST computer ONLY.

I have a Mega ST and would like to use the board. I also have a TOS 2.06 card on the Mega expansion slot PLUS an AT-Speed IBeMulator piggybacked on my 68000 cpu chip. Can I still connect your board and retain the use of my existing hardware? Does it work well with hard drives? I've heard some word from the tech at Toad (Dave) that the Xtra Ram Plus 8 board caused probems with hard drives, is the Marpet OK?

1003. Re: What *is* TT-ram?

Newsgroup: comp.sys.atari.st

From: japolis@nyx10.cs.du.edu
Message-ID: <37srcb$gtj@nyx10.cs.du.edu>
Source record: 178978

Regarding my earlier question about ST vs TT ram:
Someone once made a "post office" analogy to me about the way the ram is accessed that made it so fast... he said that with ST ram, it's like a mailman picking up a letter at the post office, carrying it to it's destination for delivery, then going back to the post office for another peice of mail to deliver... one at a time.
With TT ram, he gets a whole bag of mail, and takes care of the whole thing before going back for more.
Apart from the difference that you told us about; IE 16 bit addressing vs 32 bit addressing, is there anything to this (admittedly oversimple) analogy?

I saw a claim that the version of MSDOS is the key. Version 6.x is apparently
smarter about floppies. I have not verified this.

Ever heard of speed? On a stock STE it's not worth trying to multitask
desktop operations, so I opt for speed & switch to dialogs.

1008. Atari Syquest -> PC or Mac

Newsgroup: comp.sys.atari.st
Date: 1994-10-17 05:13:57 UTC
From: brad@halia.pbrc.hawaii.edu
Message-ID: <Cxsx7A.JB8@news.Hawaii.Edu>
Source record: 178982
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

We have data archived on Syquest cartridges that were formatted and written on an Atari. Alas, the Atari is no longer with us but we need to access the data on a PC or a Mac. We have no problem connecting our Syquest to either platform, what we need is software that will allow us to mount the Atari file system or somehow convert or copy the files. Is there such software anywhere? If not, would anyone with an Atari and a Syquest drive be willing to transfer some files to a DOS or Mac readable format?

Thanks for any help you can provide.

From: mabdul@viking.dvc.edu
Message-ID: <37t2ph$n53@viking.dvc.edu>
Source record: 178983

I'm trying to compile the MINT110S.ZOO file into MiNT c1.10 and am running into the following problems.

I'm using GCC v2.5.8 for the Falcon (MFGC258b.zoo from wuarchive.wustl.edu) under MultiTOS v1.08beta using GNU make. All previous files compile fine under the control of make.

For context.o and intr.o, however, I must recompile them manually with explicit instuctions to compile only (apparently the makefile has a call to the linker and it breaks due to external variables present in both.)

```
---MANUALLY converting *.SPP to *.S (GAS) file SESSION----
10:07pm d:\mint110 Command me: dir *.spp
----a 13871 Feb 11 1994 18:23 syscall.spp
----a 13942 Feb 02 1994 16:52 intr.spp
----a 10339 Feb 01 1994 3:28 context.spp
----a 924 Aug 17 1993 1:33 quickzer.spp
----a 1685 Aug 17 1993 1:33 quickmov.spp

> why cant I get at GDOS fonts when GDOS is installed? Any ideas? Thanx

The problem is, a terminal program emulating vt100 has to rely on the
fact, its fonts are monospaced. Therefore connect will only display
the monospaced fonts in its dialogue. If you use a newer version of
speedo which allows to to have bitmap and bitstream fonts in parallel
you can still use all the bitmap fonts that are available with a normal
gdos, like connect.fnt...

Nevertheless I'd suggest to switch to NVDI3 which allows you to have
speedo and true type fonts (of which a lot are monospaced, too) at the
speed of bitmap fonts. Really a big experience!

No news - but a bug report that I meant to mention a while back.

v2.46 of OMen worked fine on my f030 4/32Mhz + SVGA monitor, but
no matter what mode I start v2.50d from, it still shags the screen by
setting some ridiculous mode on start up.

Bug Bug Bug.....time this was fixed.

But anyway, it seemed an interesting system, but really needs the
programming libraries to support it releasing over the net, or
it will be dead in the water......

Craig.

What version of the libraries do you have? I ran into a very similar
problem, and it was because of very old libraries. Once I grabbed some
newer ones (patch level 44 the last time I grabbed them, a while ago)
the compile worked fine

I have no problem running 250 on my Falcon and SVGA. I think the manual states that you need to boot in some ST rez first, then set rez from within OMEN. So I booted in ST-High rez, then set OMEN for 256 colour interlaced, and it looks wonderful.

I have an STe with a SH204 and have been considering replacing the
mechanism with a SCSI (or larger capacity MFM). I'm glad to hear it
works in theory.

What do you mean, though, by "format and partition the drive elsewhere?"
What kind of elsewhere? (Does that also apply to a MFM replacement?)

Also, if I have a SCSI drive, how can I tell whether it has
parity...apart from a manufacturer's spec sheet?

1028. Wanted in UK: Hi-res mono monitor for ST

AHDI can be configured to check non consecutive device numbers. The AHDI 3.0
Release Notes describe how to do that. There's also software for configuring
AHDI, called AHDICONF.

Most hard disk drivers for the Atari, e. g. AHDI, HuSHI, HDDRIVER, recognize
DOS formatted partitions if these partitions are < 32 MByte. On the other
hand DOS drivers won't recognize Atari partitions. This means that you only
can exchange data between DOS and TOS if a partition is DOS formatted (or
has been partitioned with the appropriate option of the SCSITOOL software)
and if this partition is < 32 MByte.

Hi,

is it possible that you use the original gnu-lib *instead* of using mintlibs?
I have renamed the mintlib *.olb files to ones of the gnu-lib
(bmgrct0.o > bgcrt0.o, mint.olb > gnu.olb, etc.)
That works fine, and I always have my things compiled with mintlibs.

This is interesting really...

I have tried OMEn 2.50d on my ST in both TOS 1.06, and TOS 2.06 mode,
and I always get a garbled screen....and can't do anything...even
though I can sort of see mouse movements there...

My friend who has tried this on his TOS 2.06, says that it works.....

We both have STEs

I have also tried this on a friends Falcon TOS 4.04, MultiSync
monitor....and it works perfectly.

Some of my contacts in America have also told me that it works on their
TT, and or Falcon....

Hmmmm....anyone any ideas?

1037. Power Magazine 20

Newsgroup: comp.sys.atari.st
Date: 1994-10-17 13:40:11 UTC
From: cm3hirjd@bs47c.staffs.ac.uk
Message-ID: <37turr$947@bs33n.staffs.ac.uk>
Source record: 178901

For those of you who still havn't got into the 'Power' scene I have just uploaded issue 20 of this superb little disk magazine. It can be found on ftp.uni-kl.de and should be sorted into the right section anyday now.

It will work on an Atari STFM or STE with half meg or more, but NOT on a Falcon or TT even via Backwards.

If it is technical stuff and programming source you are after then forget it, but for a quite unparalled ST-Community production this is the place to be. James (the editor) pushes out this magazine once a month and there is a decent selection of interesting features for everyone and the contribution level is very high. They even do competitions with average to decent prizes!

You can email POWER MAGAZINE by sending your mail to: requiem@armory.com with the subject as: POWER

I hope you all enjoy this production and make sure you get issue 21 on the 1st of November 1994, especially as it has an interview with me in it ;)

Dear friends,

I'm looking for a (public domain) conversion program to convert
postscript 2 HP deskjet format. It has come to my attention that
Ghostscript should be able to do the trick but since I am not
experienced to Ghostscript (what fonts do I need ?) , I thought I better
ask some atari hackers for some advice.

If you happen to know how this could be done please mail to me directly.
Thanks in advance.

N.B. (should run on an atari ..)

{;)

>If the 68000 can't cope with virtual memory, how come Calamus S on my
>STe uses virtual memory?

Calamus implements virtual memory in software - ie, when the computer runs out of memory, the program uses the hard disk.

The 68000 doesn't have the hardware to provide 'real' system virtual memory - it is possible to add software virtual mem (this is what Outside does...)

Steve, I don't know how Calamus S handles the virtual memory, but I'm willing to bet it's a software hack that only works because Calamus is designed to use it. Generally speaking, processors less than the 030 don't handle virtual memory because of the lack of built-in memory protection.

I never thought I would say it, but I too am somewhat dissapointed with Neodesk 4.0... The features are great, but it causes 'boatloads' more memory fragmentation than Neodesk 3.0 did (even running TOS 1.04), and, gobbles up a lot more memory in the first place. I never had 'out of memory' problems until I installed Neodesk 4. RATS! Hopefully they will fix the bugs soon and all will be well!

>
>Hope this clears things up!
>
>Dan

This is incorrect. The reason TT-RAM is faster than ST-RAM on the
TT030 is because the video subsystem is not connected to TT-RAM.
TT-RAM does not have to be shared between the CPU and the video
subsystem. In addition, the CPU can access TT-RAM in burst mode.

ST-RAM, on the other hand, must share its bandwidth between the CPU
and the video subsystem. Think about how video refreshing works. The
image you see on the computer screen is stored in a frame buffer
(ST-RAM). This frame buffer must be read everytime the screen is
refreshed. Typically, the screen is refreshed at about 60 times per
second (60Hz). It takes about 153 Kbytes to store an image at 640x480 with
16 colors. This means the video system must read 153 Kbytes every 60
seconds!

In order to insure a stable image, the video system must have a higher
priority than the CPU. Hence, everytime the video subsystem is
refreshing the image, the CPU is locked out. This is the main reason
why ST-RAM is slower than TT-RAM.

By the way, to help offset the bandwidth demands of the video system, Atari actually made ST-RAM 64-bits wide. The video system can grab 64-bits at a time (however, the 68030 can only access ST-RAM 32-bits at a time).

So, in summary, the TT030 has two types of memory: ST-RAM and TT-RAM. ST-RAM is 64-bits wide and acts as the frame buffer and hence must be shared between the CPU and video system. TT-RAM is 32-bits wide and is pretty much dedicated to the CPU. In addition, the CPU can access TT-RAM with burst mode.

YES! Please please please be nice to Sam (and Bob as well of course)! We all have some frustration about the lack of support/advertising for Atari products, but let's face it, Atari has little to no money for advertising! I would much prefer that Atari keep making little-used but *very good* products rather than sinking all their money into advertising and building crap for the masses to buy. Sure, you can sell any piece of shit with the right advertising (because people tend to be lemmings;-))), but if you have money for *either* development *or* advertising, I think development is the proper outlet...

Just my .5 cent worth...

: : Well, I dont think .030 is a good name, as others have said, since
: : Medusa has an 040, and it seems that 040 options exist for the Falcon.
: : A nice politically correct name is in order :-)

: How about comp.sys.atari.0x0 That way anyone with a 010 :) or better
: could use this section. (and we won't offend anyone.)

: Vince

: P.S. I use an 030. :)

Although there aren't that many Falcons out there. I would like a
seperate group. There a are a whole lot of Falcon only programmers out
there who need to converse. There is also a whole lot of new games/apps
coming out for the Falcon.

I am working on a game or two myself, and it is a pain to have to rummage
through non falcon stuff. I own ST's too, so I will still read ST
sections, but I think there is a need, and like the guy said, Mausnet
offers a Falcon section, which I read regularly (I can speak German luckily).

It is logical, and I dont understand why people are getting stressed
about. If they dont own Falcons and dont want to read the new group,
then thats up to them. Why stop the people who want this.

Ooops! Right you are, Ted and Gert. I forgot that the Falcon uses an IDE 2.5" drive. They should be a bit cheaper than their SCSI counterparts, but still a bit more dear than the 3.5" units.

And if one does not mind altering the internal configuration of the Falcon and doing a bit of experimentation, sticking a 3.5" drive in there as Gert suggests is probably a good idea.

Thanks for the correction, guys.

>Tempus and it crashes. (please correct me if I'm wrong on this)

You're confusing the address pins and the data pins.

The 68000 has 24 address pins and 16 data pins. This means that it
can address or handle up to 16 megs = 2^24 of memory. With 16 data
pins, it can only read/write to memory 16-bits at a time.

The 68030 has 32 address pins and 32 data pins. This means that it
can address or handle up to 4 gigabytes = 2^32 of memory. With 32
data pins, it can read/write to memory 32-bits at a time.

There are no problems with having 32-bit wide memory. This doesn't
cause any problems at all with programs. The CPUs transparently hide
the real nature of how wide the memory system is from the programs.
For example, on a 68000/68030, there is an instruction to read in a
32-bit word. If the code is running on a 68000, then the 68000 takes
2 read cycles to read in the word. If it is running on the 68030 it
only takes 1 read cycle.

The problem is this: Even though the 68000 has only 24 address pins,
its internal address registers are 32-bits wide. The upper 8-bits
are ignored. Some clever programmers used those upper 8-bits as a
fast way to pass data -- it would have no effect since it was ignored.

Unfortunately, the 68030 does not ignore those upper 8-bits. Any data
in those upper 8-bits will be concatenated with the lower 24-bits and
will be intrepreted as a 32-bit address of some memory location. What
usually happens is that this address is not a valid address and causes
the TT030 to have a bus error.

There are utilities to force the TT030 to ignore those upper 8-bits in
order to be able to run these programs. This forces the TT030 to use
24-bit addressing and hence can only address memory up to address
location 2^24. Since TT-RAM is mapped above this address, this means

that the TT030 cannot use TT-RAM when forced into 24-bit address mode.

ST-RAM is on the TT030 for the issues of compatibility. However, it is not for the reasons you cited. The reason it is needed is because most programs expect that any memory you allocated from the operating system can be used as the frame buffer. On the original ST, all memory was shared between the CPU, video system, DMA system etc. so when you request memory from the OS, you can safely use it for almost any purpose.

However, if a program tried to allocate memory from TT-RAM and tried to use it as a frame buffer (or use it to play sound samples from the DMA sound system) it would cause problems because the video system (and the DMA sound system) does not have access to TT-RAM.

I hope I didn't confuse matters any further!

>Apart from the difference that you told us about; IE 16 bit addressing vs
>32 bit addressing, is there anything to this (admittedly oversimple)
>analogy?

WOW, this is bringing up a lot of interesting points - is ST-RAM in a TT
actually 16 bits wide? I thought that the CPU instructions in a 68000
which deal with 32-bit data just do it in 2 data cycles but the SAME
instructions on a 68030 do it in one cycle (since it can grab 32bits
at a time) much like the 8086 - 80386. The MMU must be real complicated
if it limits the 68030 on only 16 bit data operations in the ST-RAM
portion only and preserves 32-bit on the TT-RAM. Most operands in
680x0 type code are 32 bits wide (I would imagine) so TT-RAM
should show a vast improvement over ST_RAM in terms of operation - the
benchmarks I've seen are 1.6-1.7 times. It seems there should be
more of an improvement with a 32bitvs16bit data bus.

I thought the difference with ST-RAM is that the video and other hardware
have complete access to it and thus cycles are shared. As well
is it slower-RAm because it doesn't really need to be that quick
to synchronize with the video/dma etc. TT-RAM can use fast ram
chips (70ns) effectively (at least that's what I understand). Isn't
ST-RAM 120ns RAM?

ANyone who actually knows about this stuff - it would be great to
hear the facts.

Sorry to steal the subject line but...

On the subject of XCONTROL - can anybody explain why the latest
version SOUND CPX (dist with v1.31) doesn't recognize the
sound capabilities of my TT? I have a TT with TOS 3.06
and the same CPX used to work fine with my Mega STe - most other
STe sound related programs work just fine. Is this an oversight
or is there a version that does work?

Thanks,
Sam

t821431@minyos.xx.rmit.EDU.AU (Richard Clarkson) writes:

> Can the Midi work on the Spectre Gcr Mac emulator...Even via the
> serial if i was to make midi ports on modem port?

Well, you can't divide the ST's serial port clock down to 31.5 kHz, or whatever MIDI uses. I suppose you could drive it at 38.4, and have some external hardware resend it at 31.5... but that would be quite a project.

In any case, when I last checked you needed a Mega ST and a special board to do anything with Mac MIDI. It used to be that Mac MIDI programs worked around the OS calls used for handling the serial ports, and went direct to the hardware. There was one timer chip in particular that most of them wanted to talk to, that the Atari didn't have. Gadgets by Small's MegaTalk board -- primarily designed to do Apple LocalTalk networking for Mega STs running Spectre -- included the Apple timer chip on the board, mapped to the same address, for compatability with the Mac AppleTalk code. This had the nice side effect of letting these badly-behaved MIDI programs work, too.

But that's all only of historical interest now. Gadgets isn't selling MegaTalk boards anymore. On the other hand, Mac hardware has changed a lot since those days. Apple broke lots of programs that didn't follow the rules with some changes. If they've changed their serial hardware, and application developers have been forced to use clean OS calls in order to keep their programs working, it should be possible to trap those calls, and have them use the ST MIDI hardware.

Of course, this code would have to be included in Spectre. And Spectre 3.1 is what, three years overdue?

David,

I don't see a lot of excessive crossposting, maybe it's a
perception of how much = excessive crossposting :), the .tech group is
IMHO not ok for programming discussion because it doesn't involve it.

It is a clear distinction from *.tech, tech is not wide enough
to incorporate programming. I guess it's "OK" but not perfect? *grin* ;)

In any event, you can vote Yes or No when the CFV happens.

I think that you could get the card from a firm called Hard & Soft. I don't have the adress but if you buy the german magazine ST computer, you would most certenly find it there.

I have a friend who bought from an affair in Lund /Sweden (Falcon Pro center???)

I'm using the GFA-Basic version 3.6 with ergo!-pro and inline-code. I'hope that i'm not using any critical commands of GFA-Basic. The uucico works on a falcon without any problems and under mtos also. With ergo i've found a lot of bugs in the old-source code.

1065. 128k ROM select?

Newsgroup: comp.sys.atari.st
Date: 1994-10-17 20:51:02 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <10171994.205102@empyr.dircon.co.uk>
Source record: 178934

Hi, I hope this is atari.st.tech, as my OLR chops off the end of the newsgroup name, it could be just atari.st !

Right, I have a friend who is sending me some TOS ROMS, I'm updating from 1.2 to 1.41. His ROMS are the 'six pack', I've looked in my ST and it has just two ROMS. There are a couple of soldered 'links' near the ROMS that look very much like selectors for 256k or 1M (6 or 2 ROMS), especially as ;

1) They have '256k' and '1M' written on the board and
2) They are near the ROMS !

:-)

Does anyone know which way to solder the links correctly to enable the 6 ROM configuration ?

(Any clever buggers who say 'The other way to what it is now', get a large custard pie on the head ! ;-) It is not too clear where the links should be, as there are a few possible places to connect.

Thanks in advance.

[short upgrade story: when I took the ST from 512k to 1 Meg, I had to remove the solder from all the holes in RAM bank 2 before I could solder in the new chips. Not having a desolder pump, I had a bright idea to use the hoover / vacuum cleaner nozzle on the underside of the board whilst melting the solder on the top. It was working great, solder disappearing out of sight, nice clean holes. Great....until I turned the board over and found the solder had spread all round the holes on the underside of the board, all over the tracks - everywhere ! Took ages to clean up whilst trying not to damage the tracks ! When it came to test the upgrade, I was too impatient to properly rebuild the ST first, so just balanced the floppy drive on the edge of the case and ran the test program. Upgrade was fine ! Then I knocked the floppy drive slightly and the bottom of it touched the shielding on the ST, which is earthed, and bzzzzzt....one dead floppy drive. Moral: Get the right equipment, take it slowly and DONT BE IMPATIENT ! I know !! :-)]

To: rgivan@cix.compulink.co.u
In your message you said you're looking for info on multi-player games prior to 1983. On our PDP-11 at school we had "M-Trek", a multi-player Star Trek where each player had his or her own terminal, and you could also have computerized opponents. I think up to 12 or 16 people at one time. Also, what about Pong? Or are you looking for Atari computer games only? The 800 was around then... Wizard or Wor and Silicon Warrior are both 1983... There were several APX games such as Attank! or Dog Daze that may have been out before 1983. There were also LOTS of multi-player games on the Atari 2600, such as Warlord and Indy 500. All of the games I mentioned have 2 or more people playing at the same time, not waiting for "turns".

>Atari actually made ST-RAM 64-bits wide. The video system can grab
>64-bits at a time (however, the 68030 can only access ST-RAM 32-bits
>at a time).

Why is it called ST RAM and TT RAM then? Simply because, like in an ST,
the ST RAM holds the frame buffer for the video? That seems like a
rather vague reason...

>So, in summary, the TT030 has two types of memory: ST-RAM and TT-RAM.
>ST-RAM is 64-bits wide and acts as the frame buffer and hence must be

The TT isn't an ST either - but it would be silly to claim it deserved a group all of its own. All the machines are binary compatible - therefore they all belong to the same family. Families should stick together!

:-)

> to make that the whole thing would become not-worthwhile.

2 points:

The DSP in the falcon is not that good. Its unlikely that it will be able to do everything even cheap modems in a couple of years time will do. I don't think its up to ISDN (even though I'll admit I'm user a user of ISDN, not a developer).

There is more to the cost than the price of the parts. At least in the UK any such modem would need BABT approval. This is not cheap. Sure it is currently possible to sell it without approval - but this could change at any time.

> Ps. Roland, How Do You Then Propose to make the Atari Range
> More Profitable If Not with new Hardware/Software/Newsgroups?

I don't. I'm glad there is still are active developers - without trying to fight the inevabitible. Ataris just don't have the economies of scale against the PC. Ataris are no longer cheap - unless you're only interested in a basic configuration.

> I for one think that one of the greatest advantage the Falcon has
> has is All The hardware it has as Standard, ie. LocalTalk-Lan,
> SCSI-II, Analogue & Digital Joystick Contr. etc.

It would be nice if people actually used some of this extra hardware. The LAN port on the MSTE and TT has hardly been used at all AFAIK.

> (We Actually Found That A PC-clone (This Compared with a
> 386dx/40 !!) with all the stuff the Falcon has would cost
> Atleast 2/3 more then the Falcon. If We could also offer a

True - but obviously people are not prepared to pay for the extra hardware and/or PC compatibilty outways the advatages of the Falcon's built in hardware.

> cheap upgradable DSP ISDN modem, maybe even include it in
> standard packages, then the Falcon would once again be a

Very few people would have a need for such a modem. By the time they would have (maybe 5 years time), ISDN adaptors are going to be dirt cheap.

> Ps. Roland, Get A PC. You Seem to think that the Atari's are long
> dead anyway.

I've just bought a TT thankyou very much! Why should I buy a PC when I have no software for one?

Roland.

october is a big systemindependent computer exhibition in Elmshorn.
Elmshorn is a city 30 km north of Hamburg. The ECT has 10000 visitors
on average.

The exhibition are organized by the CCE e.V. and the city of Elmshorn.
The CCE e.V. is one of the biggest german systemindependent computer
clubs.

More than 70% of the exhibitors are ATARI dealers, ATARI clubs, ATARI
software producers and ATARI freaks. It's no PC show, it's an ATARI
happening. It's the biggest ATARI exhibition in North Germany since
the ATARI CeBIT exhibition 1992 in Hannover.

Venue is the KGSE Elmshorn (Kooperative Gesamtschule Elmshorn), the
street called 'Hainholzer Damm'. You can easy reach Elmshorn by train
or motorway.

Exhibition opening:
Saturday 29th october 2 - 6pm
Sunday 30th october 10am - 5pm
- no admission fee

- additional : - big cafeteria
- big tombola
- win an ATARI FALCON
- separate product presentations
```

Number 2 posting...

Well I have tried again to get Stardust to run, I dnloaded
it again from A.A.

All I get is the Title screen, then the disk loads, then fade out, that is all.

All run from disk on a UK STE 4 megs TOS 1.6, and I have tried
to remove some ram with a ram disk, if that could be a problem..

Any clues...??

Thanks.....

It worked fine for me (MegaSTE, 4mb, from hard drive). I used the same
file you did, so if you didn't get any errors from lzh, I would guess that
it is something on your end. Try it from a floppy, no ram disk, perhaps?

1078. GFA Basic Compiler/Interpreter

Newsgroup: comp.sys.atari.st
Date: 1994-10-17 23:42:22 UTC
From: bob@news.otago.ac.nz.earthlight.co.nz
Message-ID: <CxuCIn.MFH@news.otago.ac.nz>
Source record: 178858

Hi There,

Recently, I have been searching all over the place for a GFA compiler. I managed to pick one up in a sale for about $10 which was great. I raced home with it, stuck it in my STE and tried to compile a GFA program with it.

Problems. It's a compiler for GFA Basic 2.0 and i've got GFA 3.5. What i'm after, is either the compiler for GFA 3.5 (preferred) or GFA Basic 2.0. Are these available for FTP from anywhere or do I have to mail order it from somewhere ... if so, where?!

Thanks!

- Bob -

Minix partitions often look like half full GEM ones.

Have you changed the partition type? If it is not set to GEM then it
probably won't work. You can do this in the ICD format program.

Undoing Minix partitions is definatly possible - though I haven't had to
do it for a while.

Roland.

That doesn't sound right. The number of address bits has no relationship to the number of data bits. If only 16 address bits were used - then you would have only a maximum 64K RAM area.

> If the 68000 can't cope with virtual memory, how come Calamus S on
> my STe uses virtual memory?

It doesn't ;-)

Well - it might do - but not transparently. Ie the application *itself* has to do all the work shuffling data in and out of memory. Fine if your application is written this way - but not so good other wise.

Real VM is totally transparent to the applcation - but you need a certain level of hardware support that the 68000 just doesn't have.

:-)

>or is there a version that does work?

AFAIK, the version distributed with v1.31 is buggy ("broken" might be a
better word). You need the older version. If you don't already have it,
I'd be happy to uuencode you a copy, saving you the d-l time of the entire
archive. FWIW, the version you're having problems with on your TT also
doesn't work on my Mega STE.

1083. Setting SCSI ID of a Digital HD

Newsgroup: comp.sys.atari.st
Date: 1994-10-18 00:19:12 UTC
From: gert@ttgk.textlitho.nl
Message-ID: <Up-EJSAFGVI@ttgk.textlitho.nl>
Source record: 178868

Hi,

Does anyone know how to adjust the SCSI ID of a Digital RZ28-E harddisk ?
On the PCB of the drive are 6 jumper pins arranged in 3 rows of 2 pins,
normally this kind of arrangement implies the 1-2-4 SCSI ID setting, but
whatever combination I set (the drive came without jumpers on these pins),
the drive keeps 'being' ID 0 and runs as if nothing changed.

As the drive is not starting up on itself (spindle motor doesn't start on
power up, only after being 'asked' by the Hushi driver software...) I would
like to set the ID to anything other than 0 so my 'old' SCSI drive could
boot up the HD driver and then start up the Digital. Booting from floppy
goes OK but I had to set my old drive to ID 1 to get things running.

The drive identified as SCSI-2 with the SCSI tools from Hushi, maybe this
will help a bit..

Could the drive be 'programmable' ? It does contain an EEPROM 28C64.

Gert

P.S. I forgot to mention, the drive is connected to the SCSI port of my TT.

well, they can be redirected (login -a -bAUX) but the screen updates
don't work correctly unless you are an ST on the other end. RSN, a new
version will be available that can work with different terminal types.

1092. Questions regarding MegaSTe and Cartridges

Newsgroup: comp.sys.atari.st
Date: 1994-10-18 03:23:14 UTC
From: higham@ist.flinders.edu.au
Message-ID: <1994Oct18.032314.38474@frodo.cc.flinders.edu.au>
Source record: 178860
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I was wondering if anyone had experience with a Mega STe and cartridges,
namely Spectre GCR and Replay 16 or 8. I have seen a pic of a R.16 and
I think it would be a tight fit to get it to fit well on my Mega.

Hmmm, the main reason I bought it was for music, I hope a Replay 16 will
fit *8-/

Anyone got any of the above cartridges for sale, in Australia if possible?

Thanks,
Skip.

Ps: how about comp.sys.atari.>68000 for Falcons, TTs, Pak3s etc.
....well it seems appropriate. ;)

It was none other than Victor White that wrote on 12 Oct 94 that ,
VW> Having sold my old 520-ST and picked up a Falcon, I noticed
VW> that a percentage of my ST programs do not run on the Falcon.
VW> Anyone have the scoop on this?
VW> In perticular, I have alot of old, but good, programs
VW> written in the BASIC that came with the 520-ST (vintage-'86),
VW> but I can not get it to run.
VW> Any ideas? Patches? Useable BASICs out there for cheap? ideas?

I don't think it will help you in this case but a lot of old ST stuff that would otherwise not work can be persuaded to do so with 'Backwards' which patch's the Falcon to behave more like an STFM. Current version is v2.70.

1096. HD Format problem...

Newsgroup: comp.sys.atari.st
Date: 1994-10-18 06:14:51 UTC
From: sforseil@vub.ac.be
Message-ID: <37vp4r$m1g@rc1.vub.ac.be>
Source record: 178866

I knew there was a way to make a SCSI HD partition usable by both
MSDOS and TOS. But the program I used to format the HD didn't accpet partitions
larger than 32Mb.

So here's my problem. A customer has a 500Mb Digital SCSI external HD
wich should be used by both his Atari and his PC. Not concurently of course.
He just wanna use his falcon to record huge d2d sounds and then exploit them
later on the PC. He had sounds as large as 110Mb. So there is a problem.
I wasn't able to format the HD so that partitions larger than 32Mb were
recognized by both MSDOS and TOS.

Is there a way to do that? Some formating/partitioning program
I don't know perhaps?

Any help will be appreciated, even if it's "You definitely CAN'T
do that".

Thanks.

Stephan

SDTUNNEL (STARDUST) does not Run...

Well this is my third try to get SDTUNNEL.LHA to work,
this time I FTP Mailed a copy from kl.de using a remote mailer.

I get the same results, title screen, disk loads, then fade out.....

I also tried it with memset for one meg...!!!

Do I need one of the later STE's for this to run, ie, one with the intergated
blitter chip..??

Please can any one help.....

Thanks.....

From: mdekker@fwi.uva.nl
Message-ID: <3804g2$74t@matrix.fwi.uva.nl>
Source record: 178870

Hi,

I am looking for a program that writes the screen to disk. Not only monochrome
but also color screens. It should be usable at any time so I guess it should
be .acc or tsr (but .acc is good enough, because I want to make dumps of GEM
screens).

I've just uploaded the DULIB GUI library for Lattice C (5.52) and
the OOPLIB Object Oriented Programming Library for HiSoft Basic 2.

You should be able to find them on ftp.uni-kl.de any time now.......

Any comments appreciated.

(Frank - I haven't done the docs for the Basic version of DULIB yet,
so I'll upload that next week.)

Craig.

In Atari's terms the TT RAM is actually called "alternate RAM" (which
also includes memory from the VME bus). I think the ST RAM is called
"compatible RAM" or something like that.

|> What exactly is burst mode? I designed my own TT RAM board and I don't
|> even know... :)

In burst mode the CPU fetches four consecutive 32-bit words in very
short time. The CPU does not have to start the rather complicate bus
protocol for every word, instead only the address is incremented and
only one additional signal is asserted. The burst mode is used to
fill an entire cache line in one go. Instead of having to waste four
clock cycles for each word the cache line can be filled in about 12
cycles total (not sure about the exact figures, but should be close).

Not that I know of. It shouldn't be a big problem to convert the
Atari partition tables into a DOS-readable format, though. Since
most Atari hard disk drivers nowadays support the DOS partition
table format, you would then be able to read and write such
partitions both on the Atari and on DOS clones.

Volunteers?

When reading Microsoft's specifications on bootsectors, one is tempted
to think that *all* PCs should be able to read nearly all kinds of ST
disks if they adhere to the standard. Obviously, they don't. It is
safe to say that our trusty Ataris are more PC-compatible in this
respect than PCs.

Get a copy of Gemview for the ST range. It's available at Umich,
probably in the graphics directory. It will convert almost any
picture type known. It's shareware so if you use it remember to
pay your dosh for this excellent program.
Cheers,
Dave

Jeffrey - you can use just about any printer designed for use with a PC, since the Atari uses the same port design as a PC. All you need is the printer, the proper cable, and make sure the software you're using has the proper drivers for your brand of printer. I've been using a Canon BJ-5 BubbleJet printer for over a year now and have been pleased with its performance.

I bet your salesman doesn't know the difference between girl cats and boy cats, either.....:)

I was reading with interest the article in ST Format about the "new breed" of Atari machines being developed. It seems that (rather like the PC) we're going to end up with Atari "compatibles". Possibly this will be a good thing as we'll see better Atari equipment in the near future. And let's face it, Atari have totally abandoned computers for the moment while they develop the Jaguar.

Perhaps this might mean we'll see cheaper equipment in the future too. It would be interesting if there were fierce competition like in the PC compatible market.

I think it can only be a good thing. Good luck to them.

Stuart.

1120. Chords

Newsgroup: comp.sys.atari.st
Date: 1994-10-18 13:11:41 UTC
From: sbrown@cee.hw.ac.uk
Message-ID: <CxvDzI.KH2@cee.hw.ac.uk>

Is there a program available (i.e. through FTP) which takes the name of a musical chord (e.g. 'Cmaj7') and displays the notes required to play that chord? I know of Chordex, but it has a limited number of chord types.

Thank you in anticipation.

Stuart.

1121. DX-7 sysex banks (ftp) to keyboard?

Newsgroup: comp.sys.atari.st
Date: 1994-10-18 13:22:38 UTC
From: selick@acs4.bu.edu
Message-ID: <380i6u$4ak@news.bu.edu>
Source record: 178893

Hello!

There seem to be about 20,000 sound patches for the Yamaha DX-7 keyboard
at ftp.ucsd.edu in midi/patches/DX7 that do not contain the header necessary
to simply send the data out the midi port as is. Does there exist a program
for the Atari to read in a 4096 byte dx-7 bank, add on the header, and the
checksum bits, and then send it all out the midi port to the keyboard? If
so, please point me to it, or uuencode it and send it directly to me.
Thanks,
Steve

I missed the original post here (thanks to Simes for mailling it to me):

In article <37137qINN3jd@cicg-communication.grenet.fr>,
Etudiants de Physique UJF Grenoble <students@cicg-communication.grenet.fr>wrote:
>I'm desperately trying to find the integrated circuits simulation program
>CLA v2. So far, I could only find version 1 that was posted in
>comp.sys.atari.binaries. This new version was developped on Falcon and
>is far much better.
>Has anyone seen it somewhere on the Internet ?
>

>whitema@rtsg.mot.com (Michael A. White)

>If you register v1, you'll get v2.2 (like I have). AFAIK, it should not be
>at any FTP site.

>Mike

Almost right Mike :)

CLA v1 was posted on comp.sys.atari.binaries about 2-3 years ago.

CLA v2r1 is available via FTP from atari.archive.umich.edu or ftp.uni-kl.de.
(In fact, most FTP sites have it)

Mike's last update was v2r2a (but he'll be getting a new one RSN).

The current version is v2r3, which is quite an improvement over v2r1.

That will be the last of the v2rX releases, as a ground up re-write is
currently under way (to be released as v3 in 1995) with a completely new
schematic editor & simulator.

Anyway, interested parties can get CLA v2r3 from me now (enclose an international
money order in sterling for 35 pounds (europe) / 40 pounds (everywhere else)).

Craig.

I have a Spectre GCR hooked to my MegaSTE, and it works just fine. I do
have to do a little "trick" to make the floppy work correctly each time
(access the floppy at least once while in ST mode before running Spectre),
but I think this is not just a MegaSTE thing.

There are a number of programs that intercept the "print screen" keypress (ALT-Help) and instead write a screendump to disk in the form of a Degas picture (multiple dumps receive different file names). Some names: Dump It, Mobzdump, Degas Snap. I think there is at least one more. Anyway, these should all be on atari.archive.umich.edu. Hope that helps.

>myself); perhaps someone else here can fill in the details.

It exists; beyond that, I do not know much about it. Holger Weets is the
author, and it is (so I have been told) available at ftp.cs.tu-berlin.de
in one of the programming directories.

An alternative, which works very well, is Gemini II. After creating a few
batch files, you can have a very sophisticated GEM programming environment
(the desktop). What do you really have to do when programming?

1. Edit Resource Files

Put the resource editor on the desktop as an icon.
Install the resource editor as an application, taking .RSC as the
file type.

2. Build Libraries

Put the archiver (har.prg) on the desktop as an icon.
Install the archiver as an application, taking .LIB & .A as the
file types.

3. Compile .C Files

Create a batch file with a line that takes the filename from the
command line and plugs it into a command line). The syntax for this
example may be wrong; check before trying it.

cc.ttp -V -c $1

4. Use Make

Install Make (make.ttp) as an application, using .MAK as the file
type.

5. Precompile .H Files

Install the precompiler (whose name escapes me at the moment) as an
application, with *.H as the file type.

6. Use Lint

Install Lint (clint.ttp) as an application, with *.C & *.H as the
file types.

7. Debug

Put the debugger of your choice on the desktop as an icon. There are
some GEM debuggers out there, I believe.

8. Clean Up

Create a batch file that will delete all *.O, *.PRG, *.LIB, *.A, and
*.OLD (if you keep backups like I do) files. Then drag the batch file
to the desktop, so that you can execute it just by double-clicking on
it.

9. Compile Optimized Versions

If you only optimize your programs when you are done writing (as any
sane person would) then you can just create a batch file that calls
cc.ttp with the -O option for all of your source code modules. Or,
if you are good with Make (which I am not) have it compile a
different target (specified on the command line).

Is there anything I missed? The end result of this is that the CLI becomes
a glorified output device where programs send their output. If you find
that you want to use the CLI (as many people do) then you can just top
the CLI window and start typing. One side-effect (which is nice) is that
you can also use the MiniWIN (or whatever TOS-in-a-window program you
are using) as a scrollback window, so if something scrolls by you can look
at it again. There is really no limit to what you can do with this
setup. It takes some work to get it working the way you want it, but
after that it would be smooth sailing.

Me, I just use a CLI. I like GEM, but I am so used to the CLI that I do
not bother with making a GEM programming environment these days. If I
register Gemini II, though (what is the status? shareware?) than I will
do exactly what I outlined above.

The only thing that would not be easy to do would be to change compiler
options on the fly. However, you could write a program to alter your
batch files for you. In fact, that would be a good idea... :) A
project! I might actually do this, since my time for larger projects
is being taken away by college.

If anyone has anything to add (about the GEM programming shell I talk about
above) send me your comments. I'll write up (and post) a document that
explains in detail how to set up a good GEM programming environment for
SozobonX.

>after, is either the compiler for GFA 3.5 (preferred) or GFA Basic 2.0. Are
>these available for FTP from anywhere or do I have to mail order it from
>somewhere ... if so, where?!

I dunno, Bob. It looks more and more like GFA Systemtechnik has given up
completely on the Atari market. While I have not confirmed it yet, I was
recently told that GFA closed their USA office and were not even _selling_
any Atari products (such as the 3.5 compiler) much less developing new or
enhanced versions. Any German users care to confirm GFA's Atari status?

You might try contacting Paragon Computers in Perth, WA, Oz, if they have
not closed _their_ doors yet. I heard from a friend in Sydney the other
day that Phil Reeves (at Paragon) was finally giving up and closing down.
To my knowledge that was the last decent sized Atari shop in all of Oz.
I suppose your situation in NZ is similar.

I could call Toad Computers here in the US for you, to see if they still
have the GFA 3.5 compiler in stock. The interpreter was on a magazine
cover disk some time ago but the compiler was still commercial payware
so you won't find it available via ftp. The GFA BASIC 2.0 interpreter
has been PD for some time now but you don't want it, believe me. :)

As much as I personally prefer GFA, if they have dropped ALL support for
Atari then I would recommend HiSoft BASIC. At least they continue to
support Atarians and the latest version is Falcon compatible, too.

Ofir Gal could give you more info re: HiSoft BASIC, if interested.
Right Ofir? ;-)

Good luck,

-Hutch- @ Fair Dinkum Tech

Oh, come on yourself, Roger. Just because someone disagrees with your
particular point of view does not mean they are brainless or Anti-Atari.

There are valid arguments both for and against the creation of a new
newsgroup. That's what the RFD is for... discussion, not mud-slinging.
When the CFV comes out, you'll have your opportunity to cast your vote.
Majority rule is not -that- bad of a system, after all. :)

>If you think about it the more specific groups there are the less chance
>of cross posting....

No, the only way to ensure no cross-posting is to have only ONE group. :)

I don't think it would have much affect, one way or another, on the
frequency of cross-posting Atari-related articles. We just don't have
enough traffic in our groups for it to be that big of a problem, IMHO.

-Hutch- @ Fair Dinkum Tech

1133. ftp.cs.ruu.nl no longer an Atari archive!!!

Just mentioned:
Another firm now supports GFA-Basic for the ATARI and they are working on a new
version of GFA-Basic but they really don't know when that will be ready because
they don't have enough programmer :-(

At this firm you are able to get GFA-Basic in the latest version any longer!
It's here in Germnay but I really don't know the name at the moment, but if
some
more are interested in I could search for the address...

There are dozens of programs that do what you're asking. Some are accessories, some TSRs, some will dump any portion of a screen that you grab, and some simply redirect the <Alt><Help> screen dump into a PI? file on disk. Check out your favorite archive cite under "Utils" or "Graphics."

I missed out on the Mosaic/HTML thread, but for those that want to do at least SOMETHING with HTML on the ST, I recently oploaded SGMLSTOS.LZH to ftp.ifi.uio.no and ftp.cnam.fr SGMLSTOS is SGMLS for TOS , an SGML parser that will check if HTML files are correctly written (you need the HTML DTD for that of course).

Erlend.

P.S. this is currently the only available piece of SGML software available for Atari, besides a not yet de-flea-ed version of EASYDTD the DTD creator (and I still need to contact the author for permission to release it). It also includes ST-Guide versions of the docs.

P.P.S. if you know of other SGML software for the ST let me know!

1138. Gem WWW Programming Pages

Newsgroup: comp.sys.atari.st

I have started a new Atari WWW page that is thought to fill out a bit of that large gap that programmers feel once in a while. The pages will contain the information on system calls, hardware registers, Q & A, and everything a programmer might need to know.

There are a lot of hard work to go there, though, and I still need info on the new system calls of MiNT > 0.95, MultiTOS and TOS >= 4.0x.

Please take a look at the pages at http://www.dtek.chalmers.se/~d2cg/gem.html or http://www.mdstud.chalmers.se/~d2cg/gem.html and tell me what you think. I need suggestions on what the pages could contain!

Christer Gustavsson.

bo>compile a GFA program with it.

This is off the toppic, but it's a tipical question that would belong
in c.s.a.programmer....

bo>Problems. It's a compiler for GFA Basic 2.0 and i've got GFA 3.5.
bo> What i'm after, is either the compiler for GFA 3.5 (preferred) or
bo>GFA Basic 2.0. Are these available for FTP from anywhere or do I
bo>have to mail order it from somewhere ... if so, where?!

Your problem is that GFA 2.x uses *.BAS -files and GFA 3.x *.GFA
Those file are different in format and not compatible, so you would
need to have an compiler for GFA 3.x or GFA 2.x
I would recomment to get the GFA 3.5 (NOT 3.6 -that version is for
TT and Falcon), because it compiles lots of options you don't have
with 2.x e.g. the GEM-commands.
But, that's just IMHO...
GFA 2.x is not PD, so there shouldn't be an ftp site where you can
get it, but it doesn't cost much (In holland it's 25 guilders, about
10 pounds).

Frits.

In article 9952@falcon.ukc.ac.uk, jpb3@ukc.ac.uk (J.P.Beranek) writes:
...
> I create a test document in Calligrapher, save it as a .ps file fine also.
...
> I then do "lpr -Pruskin testfile.ps" (ruskin is a laser printer) and a few
>mins later I get very polite mail from a printer daemon saying that
>"testfile.ps" is not a postscript file, when it definitely is. I tried to
>get help from the facilities here, but they didn't do any good at all.
>

The first line of a .ps file should start with one of the following to be recognised as such by
document/printer managers.

%! PostScript file (Calligrapher output should use this one).

%!PS-Adobe- PostScript Doc, minimally DSC conforming

%!PS-Adobe-1.0 PostScript Doc, fully DSC 1.0 conforming
...
%!PS-Adobe-3.0 PostScript Doc, fully DSC 3.0 conforming

%!PS-Adobe-3.0 EPSF-3.0 Encapsulated PS file, fully DSC 3.0 and EPSF 3.0 conforming

etc.

(DSC - Document Structuring Convention)

Calligrapher output is not DSC conformant so must use the first form. I think it uses just a %

Many Unix file are identified by the 16 bi t id formed from the first two byte of the file thus #! for shell scripts %! for PS etc.

Ultimate Portfolio system for sale

I'll take $600 or best offer on the following (I will take any best offer, so even if it's lower, make one, if it's the best I'll take it). I'm also willing to trade for almost anything (including a Sharp Wizard).

* Portfolio w/ 640K
* BSE FlashDrive 25 - 21MB Hard Drive
* DOS Utilities card
* FileManager/Tutorial card
* 32 KB Memory card
* 128 KB Memory card
* Terminal card
* PBASE card
* Instant Speller card
* Portfolio Power Basic card
* Smart Parallel Interface
* Smart Serial Interface
* Hard Card reader (for PC, includes reader and card for PC)
* All the PD/Shareware software available from most on-line sources

I think you are using the wrong the libraries. Have you tried MiNTLibs
PL44?

BTW I've just bought a TT and was think of changing my trusty GCC 2.33 for
the Falcon/TT version. How is it improved over the standard ST one?

Thanks

Roland.

I suppose you are talking about the Richter Company in Germany who supposedly
were obtaining the rights to Atari GFA BASIC and were re-writing the whole
thing from the ground up and it was going to be great, etc, etc. I've heard so
many promises from and about these people and their as-yet-to-be-seen GFA
developments that I refuse to believe anything I hear about them anymore, at
least not until I see their product(s) on the dealer's shelves.

I'm not holding my breath anymore. :)

Or save the 2.x files in .LST format which can then be read into the
3.5 interpreter. Of course, he still needs the 3.5 compiler.

>I would recomment to get the GFA 3.5 (NOT 3.6 -that version is for
>TT and Falcon), because it compiles lots of options you don't have
>with 2.x e.g. the GEM-commands.

Agreed, but you can use 3.6 with the ST and STe, as well. It's just
a superset of 3.5, anyway. Personally, I thought it to be more buggy
on my system, but I know many who claim it to be solid. Go figure.

>GFA 2.x is not PD, so there shouldn't be an ftp site where you can
>get it, but it doesn't cost much (In holland it's 25 guilders, about

The GFA 2.x interpreter has been PD in the US for some time now, and
the 2.x compiler was finally made PD by GFA sometime last year, AFAIK.
That's what I recall someone told me anyway. Maybe so, maybe not.

Even though the compiler is pretty simplistic, I'm sure Bob (the
original poster) would like to have an English version, unless his
Dutch and/or German skills are more advanced than mine. :)

I think STs can cope with up to 170NS RAM, though most were fitted with
150NS or less. My STM has .5M of 120NS and 2MB of 80NS.

The TT sees equally flexible. My TT has 4Mb of 100NS ST RAM, 2MB of 100NS
TT RAM and 2MB of 80NS TT RAM.

I think you are right about the difference between ST and TT RAM though.

:-)

LOSE MONEY FAST

Are you tired of watching the Internet be spammed by bozos with get rich quick schemes?

Well, so am I. That's why I invented the patented, yet tried and true method to Lose Money Fast. If you follow these simple steps, you'll quickly lose every cent you have, and you'll no longer be bothered by con artists trying to take advantage of you...because you won't have anything left to lose. You'll finally be free at last! This one step method is so easy, anyone can do it. Right from the comfort of their own home. Just follow these simple instructions:

Take all your current income tax information and burn it.

When the IRS comes knocking at your door, proclaim as loudly as you can, "I DON'T HAVE TO PAY NO STEENKIN TAXES." Then, just sit back and wait. Within 90 days, you'll never have another care in the world. No more bills and no more bill collectors. No more con artists trying to part you from your money.

And, best of all, you will find yourself living the life of luxury. You'll get "3 hots and a cot" for many many years.

Just say no to money!
Just say no to scam artists.
Just say no to spam artists!
Just say YES to Lose Money Fast!

1158. Shareware Piracy (Re-post)

Newsgroup: comp.sys.atari.st

Apologies if me re-posting this gets up anyone's nose, but I'd like to encourage some more response. If you have emailed me with answers, don't worry if I haven't replied. I will eventually, when I collate the final results.

Please take 2 mins out of your time to read and respond to teh following (by Email)

Hi,

I'm currently researching an article for the January Issue of ST Format magazine about Piracy in the Shareware Market (cracked keys for shareware programs, key generators, that sort of thing), and I'm contacting you as you've released shareware applications in the past. I'd be extremely grateful if you could take a few minutes of your time to give me some sort of answer, however brief, to the following questions.

Please email all answers to frank@theshack.demon.co.uk as soon as possible. Thanks!

1) Have you ever registered a shareware program?
2) Have you ever continued to use a shareware program without registering it? If so, why? Were you worried about not receiving anything in return? Were you worried about sending money to a foreign country?
3) If you answered YES to #1, roughly how many programs have you registered?
4) Have you ever been offered a cracked shareware program?
5) Have you ever been offered a textfile or program which allowed you to register a program in your own name?
6) Would you ever use a cracked shareware program?
7) Do you think the future of the Atari computers lies in the commercial market, or in the shareware market?
8) Would you rather see shareware released as full versions, with the onus on the user to be honest, or crippled versions where you're forced to register?

Please feel free to add *any* other comments, and thanks for your time.

Frank Charlton,
ST Format Magazine.

This is the first call for discussion regarding the creation of a new
newsgroup comp.sys.atari.st.tech. The discussion period will end
on Monday, April 30, 1990. (Total discussion time will be 18 days.)

Initial proposals (to be discussed during the discussion period):

Name
---

comp.sys.atari.st.tech

Charter
------

comp.sys.atari.st.tech will be devoted to technical discussion
regarding Atari ST software and hardware. Examples of topics to
be discussed in this newsgroup include:

"What are the pinouts for the ___ port on the ST?"

"Has anyone managed to hook up a ___ successfully?"
(Assuming this is a nontrivial task)

"Which system vector controls ____?"

"What is the official, Atari-sanctioned method of doing ___?"

"What are the specs for ___ file format?"

"How does ___ manage to get 20 million colors on the screen?"

"What is the best way to do fine scrolling?"

Examples of topics NOT to be discussed in this newsgroup include:

"How do you get past the dragon in ___ game?"

"For sale: ___"

"New product announcement: ___"

"My ST is better than your ___ because"

"My ___ is better than your ST because..."

"Atari's financial situation is ___"

Moderated?

My initial proposal is that this group should be unmoderated.

Voting for/against:

The official vote will not be taken until after the discussion period
has ended. No votes will count officially until the CALL FOR VOTES is
made.

Thanks.

In article <38050i$r95@golem.wcc.govt.nz> sheppard_r@kosmos.wcc.govt.nz writes:

(quotes omitted concerning proposal for comp.sys.atari.programmer and
David Stevenson's response have been omitted to save photons)

>Come on come on how about being POSITIVE, go have a look at the Amiga groups,
>we leave a lot to be desired...
>
>YES WE DO NEED A PROGRAMING GROUP..
>
>So Please put brain into gear before posting, that is if you have one...:-)
>May be you need to move over to the PC clone patform, you are obviously
>not to intrested in Atari groups......!!!

At the risk of starting a flame-fest, let's try to be less rude. David
Stevenson is a long-time Atari supporter.

>If you think about it the more specific groups there are the less chance
>of cross posting....

Well, if the groups are clearly distinct, like .source / .binaries
that's probably true. However, since programming is undoubtedly technicalot
I would expect most .programmer msgs to be crossposted to .tech. The
volume of messages surely isn't high enough to warrant splitting. Ask
yourself: how many people would decide to subscribe to .tech and NOT
.programmer, or vice versa ? If the answer is "almost no-one", then
creating a new group can't help (and it will almost certainly increase
the number of messages to scan).

1162. Looking for the FAQs

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 01:27:00 UTC
From: asges@orion.alaska.edu
Message-ID: <1994Oct18.212700.1@orion.alaska.edu>
Source record: 178835

I looked at MIT's pub/usenet directory for Atari.St faq files and nothing was there. I am interested in obtaining an St system, mostly for games and netsurfing. Is a 520 system sill compatible with much of the game software out there and are there any magazines that cover any kind of St momvement?

1163. Re: Unwanted: MiniX partition

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 01:52:31 UTC

Message-ID: <Bs6Xqmn.lmcclure@delphi.com>
Source record: 178836

In a message dated 10-16-94, Steve Taylor asked:

"Short of copying my entire hard disk onto floppies,
formatting the drive, then copying everything back,
has anyone got any idea how I can get my 9 meg back?"

(1) Load ICDFMT.PRG

(2) Select your drive from the menu

(3) Select the "PARTITION" button

(4) Select the affected partition

(5) Select the "Write Partition Info Only" button at the bottom of
the dialog. Make certain you have "GEM" as the partition type...
edit this if necessary. This assumes the start and end sector
information is already present (according to what you described,
it should be). If this had been a GEM partition before, the data
would still be present. With a custom partition, it may be there,
but unreconizable or garbaged, possibly necessitating moving on
to the next step.

(6) If for some reason this fails, repeat steps 1-4, but instead of
step 5, select the "Rebuild One Partition Only" button at the
bottom of the screen. All data on this partition (but no other,
if the start and end sector info is correct) will be lost.

1164. Hardware for Sale

I am interested in hearing from the elite. TT030 owners that also use a CyRel Sunrise M16-1280 graphics card.

How, well does it perform? Does it solve the dull graphics problems for the TT?

Does it work well with such programs a X-Boot, STalker, and First Word Plus (TT version).

What, about paint programs, picture showing programs.

I hope you netters can help me out. I need the hard facts about what I need to make the transition to this VME options.

> $200,000 PER YEAR!!

Hmmm. Rob a bank, get $4000. Get visited by Guido that weekend,
you lose. You made $4000/week, which is a very short lifetime of
200,000/year :)

>
> THIS BUSINESS OPPORTUNITY
> REQUIRES NO INVENTORY INVESTMENT,
> AND TAKES LESS
> THAN 1 HOUR PER MONTH TO DO!

Yeah. How much work is it to go into a bank and say "gimme
everything"?

>----THIS IS THE BEST "NO HASSLE" PART TIME BUSINESS EVER DESIGNED!----
Definitely. You won't be hassled too much in prison, not until
your cellmate starts calling you 'sugar'.

>HERE ARE SOME HIGHLIGHTS OF THIS EXCITING PART TIME BUSINESS:
>* Get started for less than $30!
One saturday night special isn't that much, true.

>* THE INCOME POTENTIAL IS UNLIMITED!!
And the potential to push up daisies or just do pushups the rest
of your life

>* No Inventory, No Paperwork, or Quotas!
Nah. Don't need any of that from Prison

>* No need to make phone calls, and it's totally discreet!
Remember: wear a mask with eyeholes.

>* No need to bother friends or relatives! Company supplies leads!
"We'll send you a phone book with the banks circled"

>* Earn Fabulous, World Wide Vacations from the comfort of your home!
To Alcatraz, Siberia, and the Sahara, not to mention all of the
neat courthouses

>* Members enjoy low cost group dental insurance & prescription drugs!
Get Uncle Sam to pay for it, yeah, I guess that's low cost

>* EASY TO EARN BIG $$$, anyone can do it!
Anyone with a positive IQ, you mean. And anyone with an IQ greater
than the square root of their IQ will not do it.

>* Member's unique investment program, will be your ticket to wealth!
Invest in a cheap gun, get a bit of money. Big deal. Let's see
you keep it.

>* No meetings or presentations are necessary!
Doesn't presenting your gun count?

>* Members can purchase name brand products near manufacturer's cost!
If you're looking for a new license plate

>* Rock-solid, long-term program that will produce a lifetime income!
3 strikes, and you've got a lifetime job making big rocks smaller.
What more do you want?

>* YOU CAN MAKE MORE IN ONE MONTH, THAN WORKING ALL YEAR AT A JOB!
You'll make more the first 5 minutes of a bank robbery than you'll
make in the next year, yeah.

> FOR FREE INFORMATION,
But braincells are extra

> AND A FREE $100 TRAVEL GIFT.....
"We'll even point you to a different bank than you normally use
so all the tellers won't recognize you"

> Please send a stamped self-addressed, #10 envelope to:
> Endless Income
c/o FBI Investigative Services
> FT. WORTH, TX. 76124-1469

>PS: PLEASE, IF YOU DO NOT LIKE THIS POST, GO ON TO THE NEXT! For
>every one that does not like it, five do! Too much bandwidth is
>waisted by NET-JERKS discussing the merits of everyone's posts!
>SEND ALL CORRESPONDENCE BY MAIL, AND PLEASE NO E-MAIL, OR FLAME!

In other words, "I'm too smart for you folks, and if you dare to
flame me, I'LL SPEAK IN ALL CAPS AND CALL YOU A NASTY NAME". Go to
hell, bozo, and you might get off on the excuse of "I left my terminal
unattended" Also, who the f**k are you to call the rest of us jerks?
We use a little more bandwidth discussing things so that 10 bozos
like you don't do this everyday, which is a far better thing. At
least you said "please no flame", but since there's one of you and
lots of us, you'll just have to deal with the flames :)

I'd like to see even five letters of appreciation from people,
never mind this bogus claim of a 5:1 appreciation ratio. If it's so
great, how about a description why this silly thing works (you forgot
to put in the request for $5 with each envelope, or does that come

next?) or some letters of appreciation from people (other than
yourself) who have gotten this pyramid scheme to work? Bet none of the
references you'll give have a chance of existing.

--- Speaking to the rest of you...

Rather than simply flaming this bozo to hell, I decided to make
fun of his 'enterprise'. What do you know, my descriptions fit his
claims... :)

>Has anyone run GEM-Bench on the Medusa. Please post the results

The Medusa currently only gets about 5.6 kWhetstones as the 040's
copyback mode could not be enabled because of problems with TOS. When
the Medusa people fix this, they should get about 7M Whetstones.

1175. WP/DTP Package with Postscript output?

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 10:05:51 UTC
From: csulw@csv.warwick.ac.uk
Message-ID: <382r1v$8hg@parsley.csv.warwick.ac.uk>
Source record: 178705

Over the next 20 or so weeks I need to produce a lengthy report documenting my final year project. I therefore need a decent package for my Falcon which will allow me to produce a Postscript file which can be sent to one of the printers here at Uni.

I was interested in Papyrus, but the main programmer says he has no plans to produce a PS engine for the program. Looks like the demo of Papyrus will just have to be a flashy text editor...

Can anyone comment on the following proposed solutions?

1) Calamus 1.09N and the Postscript module

2) Da's Layout

3) NVDI 3 getting a PS driver?

4) Anything I haven't thought of...

In the report I will need different font styles and sizes, simple .GEM drawings etc. (and contents generation would be nice)

Thanks,

Paul
3rd Year Comp. Sci.

I had the same problem until I worked out that the program HAS to be running
at 60Hz. So switch to this frequency and it will work, in colour mode
anyway.

Hope this helps,

Barry

NVDI probably won't have a PostScript driver, but Robert@COMPO has
hinted that COMPO are investigating the possibility of a PS driver for
Speedo 5. I assume it will work with NVDI 3!

Your best bet ATM is to find a Laserjet and print on that. There are
plenty of LJ drivers for Atari apps.

1181. Problems with printer in SPECTRE 3.0

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 11:48:33 UTC
From: biofotos@ars.ath.forthnet.gr
Message-ID: <2840SBHWSAQANOJQTX@ars.ath.forthnet.gr>
Source record: 178848

Hi to all
I have this problem. I run SPECTRE 3.0 in my FALCON and it seems that
there is a problem handling the Centronics port. The problem lies too to
the TT as far as I know. I have a DESKJET 520 and it can't be reset.
Is there a fix for that (I have heard something in the past) ?
Thanks in advance
Spiros

How about a FLI to MPEG convertor? (or vica versa?)
I also had an idea for a Falcon program which works something like this:

There are so many different resolutions on the Falcon, lots of programs only work on some, work faster in others etc... so how about an AUTO folder program or ACCessory that lets you assign a screen resolution to a program, when you launch that program the display changes accordingly and changes back again. Thus saving you the hassle of the Video Modes window.

Just my idea anyway...

Message-ID: <3832np$fcm@bs33n.staffs.ac.uk>
Source record: 178719

Laurent Charriere (charrier@int-evry.fr) wrote:
: My Falcon's serial port will work correctly only after a reset.
: Why ? Is there a remedy ?

: Tanks in advance,

: LC.

In the house where I live we have my Falcon linked to a PC, an A1200 and
an A500+ all via a serial link and we experience no 'reset' problem.
Maybe it's a hardware thing, or maybe you are running system unfriendly
programs? Some more information would be helpful to diagnose the problem.

1186. Re: OMEN

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 12:21:21 UTC
From: cm3hirjd@bs47c.staffs.ac.uk
Message-ID: <383301$fcm@bs33n.staffs.ac.uk>
Source record: 178720

Another rather annoying bug i've found on OMEN on the Falcon (tos 4.02) is that the files it creates cannot be deleted from the desktop, only via the OMEN system itself. This is due to the filenames having odd characters (lower case letters etc) in them. When you drag to trash on the desktop it has says error in file name, then try renaming it and you get a rename error.

Sorry if this bug has been covered already, but its a damn annoying one. Although it may be a TOS bug I hasten to add.

From: cm3hirjd@bs47c.staffs.ac.uk
Message-ID: <38335v$fcm@bs33n.staffs.ac.uk>
Source record: 178721

As a thought I guess if you all moan so much about a
comp.sys.atari.falcon how about using the following format when posting
messages (idea taken from alt.ascii.*)

[ST] - Guess?! An STFM related question/enquiry/post
[STE] - An STE only post
[FAL] - A Falcon related post
[GEN] - Applies to all Atari computers
[REQ] - A request

Ie this thread would have been a [GEN] comp.sys.atari.falcon ?
another example... [FAL] Mugwumps Demo on a VGA

Does *that* sound any better guys 'n gals?

dR> >but the final displayable images and DMA IO make programs fly.
dR>
dR> Actually, from my understanding, this is not true. Yes, ST RAM in a TT
dR> is used for screen memory, but that's not why it's slower. See my
dR> previous post for more info on that...
dR>
dR> The reason why ST RAM is in a TT is for compatability, because there are
dR> a few programs that don't expect to be able to access RAM 32 bits at a
dR> time; usually these programs are older and do funky things. Tempus text
dR> editor is an example. If I understand it correctly, the 68000 has 24
dR> address bits, 16 of which can be used for memory access (because the chip
dR> can only handle a 16 bit data bus), but Tempus used the extra address
dR> bits (<16) to speed up scrolling, I believe. When you try to run it on a
dR> TT, which uses 32 bit addressing, those extra 8 bits can't be used by
dR> Tempus and it crashes. (please correct me if I'm wrong on this)
dR>

Wrong.
The ST ram in a TT is accessed 32 bits at a time by the processor, and 64
bits at a time by the video logic.
The term ST ram comes from the fact that the memory is located below 16
Megabyte - that is within the 24 bit address-space. This is the only
address space the 68000 (and ST) can access - therefore the term.
TT - ram is located at memory locations above $00ffffffff. And as was
mentioned by John Cummins, it is not shared with the video-logic.

dR> >jc (Wishing I had a 19" monochrome TT!!!!!)

Hey, what's so wrong with a 21" monochrome TT :-)))

dR> No, you wish you had a TT with a SuperNova graphics card and a 21" monito

Nah, not for my use anyway...

>>>where to find it, ease of installation...) ?
I have written an article on this speed enhancement card for the AEO, and I have now verified that the article is in the latest issue. The card is available from Hard & Soft in Germany. If you read my article, you will find that the instalation is complicated, which is why H&S charge 100 DEM (1/4 of the price!) for instalation.

The speed increase is, IMHO, worth it. I get anywhere from 160-170% speed increase in real-world applications. Tight, cacheable loops can get as much as 250% faster.

Note that I am just a satisfied customer, and not in any way associated with the company.

Have you seen CYCEDELIC KNOCKOUT for Falcon ??
I can tell you - It`s a VERY COOL demo !!!!`
It`s a techno-trance kind of demo with 8-channel 16-bit music and a huge intro.

I love demos - I think it`s great watching demos. Sometimes better than games, because I mostly haven`t got time to play games. A demo doesn`t take houres to "complete" - ya know :-)

Hi there,

I also have a Speed Resolution Card installed. And I have a few minor problems, which I hope you could help me with....

When I run in 20 Mhz CPU and 20 Mhz BUS, the computer have problems in reading correctly from the floppy drive. There are no error messages, the data read from the floppy is just somewhat corrupted and the same thing happens if I copy a file on to floppy disk than the data is getting corrupted.

Are you familiar to this problem, if so - do you have an explanation ???

And I can`t run 40 Mhz on my Falcon, the max. is 36 Mhz with 18 Mhz BUS.
Would it work if I put an active cooler onto the 68030 ???
Or does problem lie in interferance because of the relatively high clock ??

The other problem is that games using Jaguar Joypads doesn`t run correctly with SpeedRes.Card installed. I`m quite sure that the reason for this lies in the four wires mounted close to the Joypad ports for software control of the BUS frequency.
I`m thinking of putting a four-terminal switch between those wires, so that I just can switch all the four wires off before staring a Joypad game.

Do you have a better solution ?

Keep Cool and Flying....

LaTeX is avaiable for Atari-platforms in the name of MultiTEX from MaXON COMPUTER in Germany. It`s halfway commercial, they call it "sonderdisks" - means something like "special disks".
It has everything that a LaTEX system must have, but I'm still in the learning process of LaTEX so I can`t say more now.
By the way I can tell you what I remember right here, it can export to PostScript format (very useful indeed), the LaTEX compiler comes in to versions - one for standard ST(e) and one for TT/Falcon with 68882 Co-processor for faster compilation.
You get both versions when purchasing MultiTEX.

I haven`t got the address of MAXON right here, but I'll try to find it at home if you`re interested.

Hope this could help a bit..

Keep Cool and Flying....

1195. Uploading some Icons (question)...

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 14:31:26 UTC
From: dhbutler@magnus.acs.ohio-state.edu
Message-ID: <383aju$f9d@charm.magnus.acs.ohio-state.edu>
Source record: 178702

Hi all,

I've been fairly unimpressed thus-far with the Icons available for Neodesk 4.0 (most of which are from Windoze and thus pretty darn stupid looking IMHO of course). So, I've been converting a bunch of Macintosh Icons, which are generally much nicer looking and more creative. I've set up a 'user-defined' pallate for Photoshop on the Mac which allows me to screen-snap 256 color Mac icons, and then dither them to the default 16 colors that NeoDesk 4.0 uses! What this means is that all of the icons look about right, rather than having screwed-up/random colors. Unfortunately, most of these are only effective in 16 color modes or higher on the ST (dithering the icons to B&W does not produce acceptable results, and many Mac Icons are not well-designed for B&W in the first place).

What I'm getting at though, is that I would like to release these into Public Domain with as little work on my part as possible ('cause I'm lazy see...). And, though I've been using the net for years now, I've never actually uploaded anything to an FTP site. Is there a proper process to follow, or should I simply upload them to the 'Incomming' directory at umich for example? Also, I would like to post them to GEnie. I do have an account, and, this looks like a fairly simple process, but any advice useful to a person who might miss the 'bluntly obvious' would be welcome on either of these topics!

Thanks!

|-! -David Butler- dhbutler@magnus.acs.ohio-state.edu

"To my mind the most frightening book ever published is Lewis F. Richardson's 'Statistics of Deadly Quarrels'. You've probably never heard of it even though its relevance to the mess you're in is at least as great as that of Darwin's 'On the Origin of Species,' which you learned about in fourth grade. And that's because it's so completely terrifying only those 'experts' who are adequately armoured with preconceived contrary ideas which will enable them to disregard Richardson's work completely ever get to study it."

Both TeX distributions for Atari include latex as well as TeX.
You see, LaTeX is simply a set of macros that gets pre-compiled with TeX and
then included when needed.

An ST is still compatible with most of the new stuff coming out.
There are some Falcon or STE specific stuff, but most is still
ST. I would suggest getting the machine with at least 1 meg of
RAM, though, as some games and most serious software is starting
to require it. You may want to consider an STE, though. I saw
a new 1 meg STE with color monitor and software listed for $339
in ST Informer Magazine. BTW, Current Notes and ST Informer
are the only domestic Atari mags I know of. CN's address is
122 N. Johnson Rd, Sterling, VA 20164. I do not have ST Informer's
handy. Hope this helps!

It is out there somewhere, though it is not tested. 1.9 is the latest pucker
release.

1206. HSC status - official

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 17:28:42 UTC
From: fountad@vax.sbu.ac.uk
Message-ID: <1994Oct19.172842.8072@vax.sbu.ac.uk>
Source record: 178784

For the record, after managing to contact Ian Lepore (ianl@BIX.com) I got the official word on HSC:

Ian is now working with the 3D0 thingy, and doesn't have time for the Atari anymore. HSC 1.40 is the final version - V2.0 supported externals with names >7 chars, but nothing else dramatic. It won't be released.

Gemfast 1.9 is the last official version, but I haven't found it anywhere yet. 2.0 is also out, but has not been tested. That doesn't mean it's buggy. The source to GemFast is out there somewhere too.

Yes, I know about Sozobon 2X, but I _HATE_ working from a CLI! If I wanted to type I would be using MSDOS! When S2X is GEM friendly, I might switch to it...

Message-ID: <383loh$bgs@ra.ibr.cs.tu-bs.de>
Source record: 178714

Scott Flinn (flinn@cs.ubc.ca) wrote:
: The only version of MiNT I have used is 0.95, since I haven't the
: necessary tools or resources to compile a 1.x version. My dimming
: recollection tells me that this version was produced directly by
: Eric Smith, before he began work in Sunnyvale.

: Since then I have heard two related rumours: Eric is now working on
: Jaguar things, and a binary distribution of some new version of MiNT or a
: MiNT based MultiTos (version 1.10?) is planned. Does anyone know who
: is making these plans, or who is continuing to develop MiNT or MiNT
: derivatives?

: Thanks in advance for whatever you can tell me/us.
: Scott

Eric still works on MiNT but the Jag is top priority now.
There is a BETA-version of MiNT 1.11 on the mailing list and we
are waiting for the BETA-2 now.
BETA-2 will be tested for some weeks, bugs will be fixed and it
will be put on ftp afterwards.

This Version (1.11-final) may be distributed in binary form.

Thus everyone with MULTITOS is able to upgrade to the latest
MiNT version.
I hope this will be available X-mas :-)

BTW you really don't want to have one of the 1.10 or early 1.11
versions unless you are able to fix bugs and recompile, believe me.

: Ghostscript should be able to do the trick but since I am not
: experienced to Ghostscript (what fonts do I need ?) , I thought I better
: ask some atari hackers for some advice.

: If you happen to know how this could be done please mail to me directly.
: Thanks in advance.

GhostScript is the right choice. Version 2.6.1 works without
problems (if you have sufficient memory)
3.0 is still in test.

There are 3 files with fonts for ghostscript 2.x. These
are the basic PS-fonts in *bitmap* form. They are readable
but look ugly in larger sizes.

GS 3.0 (and later) has two archives which contain exactly the same
fonts but don't fit on one 720 k disk:-)

You can use any font designed for the ATM (Adobe Type Manager), simply
install it in the Fontmap-File.

1210. Announcment: FozCi

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 18:34:28 UTC
From: jabrana@powertech.no
Message-ID: <1994Oct19.183428.219@powertech.no>
Source record: 178727

FozCi.

FozCi a Caps-Lock indicator for the ST ranges of computers.
Unlike using a corner on the screen to display the state of
Caps-Lock FozCi uses the disk-drive A's LED. When the Caps-Lock
is On the LED will also turn On. Otherwise it will naturally
remain turned Off.

Not only that whenever you'll press one of the other Shift keys
the LED will then also turn On and remain On as long as the key
is being held down.

Make a better use of the DiskDrive LED by using FozCi!

Avaliable from most Atari ftp sites. On Hensa in o144.
Or email me to get a uuecoded version.

Hello!

I would like to learn a little bit about the Medusa machines.

- Who produces (and sells) them?
- What is the price of a Medusa?
- Are there incompatibilities with respect to the ST,
i.e. which "standard software" is known not to run
on a Medusa?

Thank you for answering!

1213. HELP! I need MiNT UUCP!

Newsgroup: comp.sys.atari.st
Date: 1994-10-19 18:55:52 UTC
From: cherborth@semprini.waterloo-rdp.on.ca
Message-ID: <H.eg.Qpilx_NURa_@semprini.waterloo-rdp.on.ca>
Source record: 178726

Boy, do I ever need a UUCP/news/email system that works under MiNT.

I got 3500+ "control" messages yesterday, apparently all trying to kill articles from a berzerk gateway (die die die!!!). Hermes UUCP, being brain-damaged, stored them all in a "control" newsgroup (which is probably correct behaviour; Hermes's brain-damage occurs in its uucico, which doesn't run under MiNT).

Just try putting several thousand files into a directory on a FAT partition. It took 16 *hours* to write those 3500 files to disk. And it still wasn't done. I stopped it and deleted a bunch of news packets that weren't unpacked yet.

Please hurry with the MiNT UUCP FAQ! Someone please! Make the software available (unless, of course, you can compile it on a wimpy 4M ST)! I desperately need to run my UUCP on a minix partition!

Help!

Try TeX/LaTeX - latest (1992) Atari versions can cope with .GEM files.
You might find that the Uni has TeX, although you would then have to
convert graphic files.

John.

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
uncompressing .Z and/or .uu.
Use the appropriate decomompression program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
xlinksys etc...) (ALL files with "sys" in their names)

i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for
"low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
disk to computer. i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

>I'm not holding my breath anymore. :)

Hi Hutch,
Strangely enough, there are 2 new GFA Basic versions for the PC !! One for
the 'older' 8086 related machines and one for the newer 80x86 machines. A
few days ago I have seen it working on a 80486 and it looked very good (and
familiar), so I think we all should kick this company (haven't got it's
name though, I will contact the guy who showed me the stuff) to create a
new GFA for the Atari, one which IS multitios compatible.

Gert

> is still a MiniX partition.
>
> Short of copying my entire hard disk onto floppies, formatting the drive,
> then copying everything back, has anyone got any idea how I can get my 9
> meg back?
>
I had the same problem. What I did was to check the partition using knifest
from hisoft. comparing the sector which has the disk format details showed
that the 'minix' partition information was still on the drive even though
I had 'zeroed' it using the icd utilities. after a bit of time studying
the differences i was able to use the disk editor to reset the patition
to a tos partition (unfortunately i can't remember exactly how i did it)
and I then had all my space back on the partition.
warning - if you are going to use this method please make sure you understand
about the way disk drives work. I more or less copied the appropriate sector
data from a similar partition.

Hopefully, someone will have an easier solution for you, but if not I hope
this helps.

Can some of the Archive be moved to other sites, like the stuff
that is not on other sites, that is if its not to late...

Or can some one move the stuff for you...??

This is a shame as I thought this was a Important Atari archive..

Yes. If you have an a Atari running with a 68030 then there is a reasonable chance you will be able to get the 'Outside' VM software working. I think you need TOS 3.06 as well.

I haven't tried it myself.

:-)

Medusa Systems in Switzerland does..in the USA Lexicor Software sells them
for (complete set) around 3,400 U$D. In Germany the price is around 8000DM,
available through various distributors.

> - What is the price of a Medusa?

That depends where you buy it from, pretty much.

> - Are there incompatibilities with respect to the ST,
> i.e. which "standard software" is known not to run
> on a Medusa?
>

There is a Medusa text file available on announce and ftp.std.com, there are
incompatib. like no games or hardly any will run, but most modern applications
will rnu. It uses TOS 3.06 and most programs will run on it that runs on a TT
withou problems.

If you can name me some software you would like to know, I could tell you
if it runs or not.

>Thank you for answering!

1226. Re: PLAYMPEG v0.68

Newsgroup: comp.sys.atari.st
Date: 1994-10-20 00:52:37 UTC
From: millert@grad.csee.usf.edu
Message-ID: <384f0l$519@mother.usf.edu>
Source record: 178742
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I got version 0.68 of MPEG play, and it works nicely, except for about half of my MPEGs. It throws the video hardware into some weird mode (probably NTSC or PAL) that my multisync monitor can't handle. It would be nice if it didn't do that.

I have this really old MPEG player that does 1fps. That program doesn't screw with the display modes, it's in color, and it works with ALL of my MPEG's.

OS/2 has no problems reading/writing to oddly-formatted diskettes; as of
2.11 though, it still can't format them. Under OS/2, I use a DOS
program, fdformat.exe, to format 1.72M high-density floppies, which I
also use on my ST.

VERY nice to be able to format in the background though.

A windowed version would be nice but only if it was Multitos
compatible or could run as an accesory. Otherwise you might as well run it
full screen. The most important part IMO is a speed controll. Another nice
feature would be an option to scale MPEGs to half size to speed up
decompression for the full screen MPEG files.

Warwick's got a good bitmap editor (called Magnus or something like
that), but he hasn't uploaded it anywhere yet... he's busy at the moment
playing with a Linux box.

> WWW Browser

I was going to do this, but my cross-compiler exploded, and I haven't
been able to get it re-built. Good luck porting libWWW on my ST; it
takes too damn long to compile "hello world"!

> More mono games

I was going to do this, too, but my monochrome monitor died AGAIN.
Programming and reading news stinks in ST Medium.

> Erm.. can't think of any more at the mo'. Any ideas...

HTML Editor; there isn't IMHO a good one of these available for *any*
platform yet. Case in point -> check out HoTMetaL for Windoze... ick!

C++ class browser

Complete UUCP, News, newsreader, email system for use with MiNT, and
yet, easy to install or at least documented and with sample config
files.

Standardized installer program for installing things from floppy (or a
large archive) to your hard drive; it'd have to support some sort of
script so you could create config files, etc by asking the user
questsions, etc.

Couple of other things I was going to work on, but never seem to have
time:

GEM version of xdm for MultiTOS systems -> essentially a GUI login
screen for your MultiTOS system.

GEM editor for /etc/passwd, /etc/group, etc.

Other GEM-based UNIX system-admin tools for use with multi-user MiNT or
MultiTOS systems.

: I certainly would. I can see it being slightly slower, but with the speed
: it has at the moment it wouldn't bother me :-)

: Paul

I'd like to see color/grey switchable in the registered version for the speed improvement.

One PC MPEG viewer first extracts a sound file (.AVI?) and then plays both the audio and video together. This may be a first step.

Sam

I don't know if Pagestream 2.2b is compatible with the Falcon,
but if it is, this is a very easy way to do what you want to do. You
print the file to disk and then use the MS-DOS print file command (I
forget what it is) to send the file directly to the postscript printer.
I have used this method with Pagestream to send to both Mac and MS-DOS
ps printers.

Why do I have to read all this crap about a upsurge in Atari support
in ST-Review and ST-Format..

Like the Germans are droping there PC clones for Ataries..

Silica Shop in the UK opening up a group of Atari shops..

This to me can't be true at all..

A lot of German software houses have droped Atari, or have droped
English support...

German magazines reduced to one...!!

UK magazine closes...ST-User...

UK computer show was a flop for Atari people...

Codehead drops Atari...

Calligrapher support droped.

Falcons being dumped..

Paragon Computers in OZZ have closed, they were Big...

Still can't get PAL Jags here...

Unable to get spare part for STE computers, (UK), this chap tried many UK
firms, some said yes but did not deliver, he ended up getting
it from the service agent in OZZ......

So come on you Magazine Editors how about telling the truth for once...

1239. [Q] Medusa incompatibilities?

Newsgroup: comp.sys.atari.st
Date: 1994-10-20 07:26:43 UTC
From: dietz@lirmm.fr
Message-ID: <38563j$66c@lirmm.lirmm.fr>
Source record: 178755

Hello!

Thank you for the information about Medusa machines.
The software which I would like to run on Medusa machines
comprises:

- TeX/LaTeX (Strunk-TeX and/or Lindner-TeX)
- Megapaint 6.0 (I think there might be problems,
as this program does not use the GEM interface
but a similar interface of its own)
- Phoenix 2.0
- QED (a text editor)
- GNU C/C++
- GNU Emacs
- alternative operating systems like MiNT, Linux or MagiC
- desktop replacements like Gemini

I am not sure if you know all these programs, for there is some german
software among them. Is german ST software widespread outside germany?

How about the support for Medusa machines? As I am living in Europe,
I am interested in support from European companies. I do not know the
swiss enterprise "Medusa Systems". Is it a rather small company? How
about the chances of this enterprise to "survive"? (If I should spend
about 8000 DM for a computer, there should be some probability that I
get support over an adequate period of time.)

Thank you for answering these questions.

If you get the CS-TeX package from atari archive, you'll find LaTeX is part of that package. And in any case, LaTeX is simply a macro package that sits on top of TeX providing you with structured markup. TeX itself has a set of macros, the so-called 'Plain TeX'. If necessary, read the comp.text.tex FAQ for details about TeX and LaTeX. In the future, you may wish to use different macro sets (document styles, or "packages") for extra functionality - get these from CTAN sites.

Cheers,

No, OUTSIDE doesn't require TOS 3.06. It works with all TOS versions >= 2.05
and with MagiC 2.0. TOS 2.0x doesn't mean, of course, it works with a simple
ST. But there are STs with the PAK/3 processor card and TOS 2.06. On these
machines OUTSIDE works, too.

It seems that Atari are licencing most of their products to third parties
firstly C-Labs with the F030 and now Sega. Does anyone know if C-Labs
intend to launch a new F030?

Also I understand Atari may have an F030 and PowerPC Falcon under development
is this true?

My recommendation would be that they look at either CompuServe or GEnie.
For Atari support, nothing beats GEnie, and for Mac (and general business
and special interest) support CompuServe is vastly supperior to AOL.
CompuServe *may* be more expensice that AOL (I don't know AOL's rates), but
IMHO it's will worth it.

Source record: 178772

I've got a distant friend who has an Atari ST-f and he nows almost zero
about computers and is using if for sampling music and has asked me if I
can conect an HD to it for him.

I have a spare 20 Meg external HD of Mac origin.
Can I connect this to an Atari st-f.
what about formatting the drive.
Anything else I should know, I quite experienced with macs but Atari I
don't even know the capacity of the floppy drive.
Could I connect and external 800k mac floppy.

What are the outputs on the st-f

Can a st-f read & write PC discs.

Any help greatly , & desperatly needed.

thanks dave

From: RICHARDSON@sscl.uwo.ca
Message-ID: <RICHARDSON.34.2EA6717A@sscl.uwo.ca>
Source record: 178787

This was discussed a few months ago but I don't have the docs. that were posted and my menory is the worst...so forgive the rehash. I have a MegaSTE with TOS 2.05. I have documentation that says the #8 dip switch converts between DD and HD floppy formatting. My question is...did ALL 2.05 machines come with HD drives or (as usual with Atari) did they switch part way through production. I am sure if they switched I got stuck with a DD drive. I tried switching dip 8, then formatting with the "Pumpup" formatter...could it be that only the desktop format can handle 1.44? I doubt it but who knows! Any help would be appreciated. Also, if I do have a DD drive, what is involved in replacing the drive with a HD? Do i have to get a new floppy controller chip as well as the drive?

Hi Simon,

To the best of my knowledge there isn't a Web browser like Mosaic on the Atari (yet!). There have been several rumours to the effect that one is being done, but this seems to only be speculation. Web pages are compatible with all Web browsers. It is a standard format that should work on any browser, however that all depends on how the writer of the browser has interpretted the standard. Mosaic seems to behave well with poorly written HTML, but others might do things unexpected.

A site is not meant to be accessed specifically by Mosaic, any browser will do. There is a copy of Lynx in existance for the Atari. It is only a text browser (no fancy graphics), but copes with the job well. When I get more details on Lynx, I'll let you know.

Hope this helps, let me know.

Bye,

Mark msh@dl.ac.uk

1270. Upload of RAINBOWv1.2demo (Falcon art package)

Newsgroup: comp.sys.atari.st
Date: 1994-10-20 14:44:11 UTC
From: f90rusa@dd.chalmers.se
Message-ID: <385vnr$96c@fili.dd.chalmers.se>
Source record: 178781

Upload of Rainbow v1.2_demo (art package)

A demo version of the Falcon-only 16-bit TC art package
is now available on the German ftp-site ftp.tu-clausthal.de
pub/atari/falcon/graphics/painter/rainb1_2.zip

The difference from the full version is that no SAVE-option
is present on the demo and that the demo is PD
while the full version is commercial.
(The demo version also contains info about the project
RAINBOW 2.0 and where to find the commercial version
of Rainbow 1.2 in the UK, Germany, France and Scandinavia.)

The difference between v1.1 and 1.2 ?
* Impressive TC-ellipse-fade-fill routines
* An extra feature in the photo studio
(* The largest difference -if you are interested in the routines
behind the program- is maybe not observed by
the user (ok -you might see a somewhat different graphic layout)
,but the whole menu driver system is revised into a more flexible one.)

...well, enough said, let's go painting !

sheppard_r@ix.wcc.govt.nz writes:
>I asked a freind here what here thought, and he stated their was not enough
>trafic for another group...

IMHO lack of traffic is not a good enough argument against creating a
new newsgroup.

If we reorganize csast and csas into the optimal number of groups we
should be able to minimize cross-posting and thus minimize the total
traffic.

I suggest:
comp.sys.atari.programming
(As Yat has proposed)
comp.sys.atari.graphics
For users of bitmap and vector graphic apps (eg DA Vektor, etc)
comp.sys.atari.dtp
Stuff for users of Calamus, Didot, Pagestream, etc
comp.sys.atari.sound
Technical discussions of the audio facilities in ST/STe/TT/F030
comp.sys.atari.demos
Discussion of latest demos
comp.sys.atari.hardware
Atari hardware discussions (eg serial port, DSP, repairs, etc)
comp.sys.atari.desktop
For users of Neodesk, Gemini, Ease, Teradesk, etc

should replace *both* csast and csas (leaving .advocacy and .sources
and .binaries unchanged).

Sure, I'd read them all anyway, but at least I'd know what to expect
in each group.

Comments anyone?

1274. SCSI drive not being recognized

Newsgroup: comp.sys.atari.st
Date: 1994-10-20 16:45:05 UTC
From: pd@mole.bio.cam.ac.uk
Message-ID: <3866qh$j80@lyra.csx.cam.ac.uk>
Source record: 178799
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Eventually, I have got my Priam 330mb hard disk to work....

But the problem is that it is not being recognized on boot-up.
(on a Falcon, Tos 4.04, only SCSI device)

In fact, the only way to get the Falcon to see the drive is to manually
load ahdi.prg (version 6.06) four times while in a VGA mode. It always
works on the fourth attempt.
It will *not* work at all on boot-up, or in a RGB resolution, whatever I do.
I have run hinstall on the first partition of the drive but that makes no
difference.

Once it has been seen, it works OK.

Any help is much appreciated!
Phil

Whoops! Yes, I meant 60 times a second....

>
>Why is it called ST RAM and TT RAM then? Simply because, like in an ST,
>the ST RAM holds the frame buffer for the video? That seems like a
>rather vague reason...
>

That's pretty much the reason. On the ST/STe, when you request memory
from the OS (through malloc), you can use this memory for anything you
want. You can run code, store data, use it as a frame buffer, or use
it to store a sound sample and have the DMA sound system play the
sound directly from it.

In a nutshell, ST-RAM is memory in which the ST's custom chips have
access to. It's like the Amiga's "Chip RAM".

TT-RAM (or Alternative RAM) is where the custom chips cannot access.
On the TT030, this is because the custom chips (for the video system,
DMA sound system, and ACSI DMA port) have only a 24 (or less) address
lines -- they cannot access memory locations higher than 00ffffff
which is where TT-RAM is mapped.

So, if you request memory from the TT030's OS and it gives you a block
of memory from TT-RAM, you can only use it to run code or store data.
You can't use it as a frame buffer or to play sound samples using the
DMA sound system. This causes some programs to break if they assume
that all memory is available for the ST's custom chipset. That's why
they call it ST-RAM -- it's needed to maintain compatibity with these
programs.

Atari created an extension of the malloc call for TOS 2.06 or higher.
You can specify whether you want the OS to allocate ST-RAM or TT-RAM
(Alternative RAM). You can also play with the header of a program's

executable file and specify whether all the old malloc calls should be satified by ST-RAM, TT-RAM or either and whether the program itself can run in either ST-RAM, TT-RAM or either.

>What exactly is burst mode? I designed my own TT RAM board and I don't
>even know... :)
>
>Dan

Let's say that the 68030 takes 3 cycles to do a normal read from memory. If you want to read in 4 consecutive words from memory this would take 12 = 3+3+3+3 cycles.

With burst mode, you take 3 cycles for the first word but the other three words take only 1 cycle each for a total of 6 = 3+1+1+1 cycles.

You need to have "special" memory in order to support burst mode. You might have heard the term "page mode" DRAM. It basically works like this: Normally, to address a cell in memory, you have to specify the row and column addresses of that cell. To read/write to another cell, you would have to specify another row and column address. This takes time.

For page mode DRAM, it's possible to hold the previous row address and just change the column address. This is a lot faster than changing both addresses. Hence, if you are accessing data within the same "page" (i.e. data whose memory address have the same row address but different column addresses), you can access them faster.

These memories are a perfect fit for the burst mode of the 68030. The 68030's burst mode is then used to read a line (consecutive words of memory--hence they lie in the same "page") of data into its internal cache.

The above is basically how I understand burst mode to work. Some of the details might be a little off but I think the general idea is correct.

1284. Re: RFD: comp.sys.atari.programmer

Newsgroup: comp.sys.atari.st
Date: 1994-10-20 19:03:35 UTC
From: hutch@ilmen.lanl.gov
Message-ID: <9410201615.AA00684@ilmen.lanl.gov>
Source record: 178654

Using the 'more is better' logic, then how about an st, ste, tt,
falcon and 8bit newsgroup for _each_ of the following topics:

comp.sys.atari.hardware (.st & .ste & .tt & .falcon & .8bit)
comp.sys.atari.forsale " "
comp.sys.atari.wanted " "
comp.sys.atari.binaries " "
comp.sys.atari.sources " "
comp.sys.atari.programming " "
comp.sys.atari.technical " "
comp.sys.atari.graphics " "
comp.sys.atari.dtp " "
comp.sys.atari.database " "
comp.sys.atari.sound " "
comp.sys.atari.music " "
comp.sys.atari.games " "
comp.sys.atari.desktop " "
comp.sys.atari.general " "
.
ad nauseum ...

Yes, of course I'm being facetious, but it does point out the need for
careful consideration as to what the 'optimal' number of newsgroups
really is. The amount of existing traffic flow really SHOULD play an
important part in this decision.

Yat's current RFD for a .programming newsgroup is one of the few such
proposals that I might be willing to support because that topic really
is one of singular interest. Non-programmers tend to dislike 'wading'
through long lists of source code in the .tech newsgroup. :) I find
the argument for a .falcon newsgroup to be somewhat less persuasive.

This is all just IMHO, of course, and I'm certainly willing to support
whatever the eventual CFV results dictate, but common sense should
prevail when considering adding multiple newsgroups given the limited
number of daily posts we experience in the current newsgroups.

Cheers,

-Hutch- @ Fair Dinkum Tech

D.SMITH200 [Dave]

To All Concerned:

This is a bit of testimony to the excellent support received by this Lexicor user:

I originally bought my Nova 16M VME at the '93 CAF. The card performed beautifully until last month, when I booted up and was looking at a rather pleasant blue screen with scattered white pixels.

At that point, Lexicor was going through some transitons, moving it's support offices to their present Boston location. Rather than ship the board to the original Berkeley location, I thought I'd wait for the dust to settle before sending the card in for the needed repairs.

Then a thought came to mind: Lexicor was going to be present at the CAF in Bridgeport on the weekend of the 27th... So why not take the 1&1/2 hr. drive and see to it personally.

Well, the Lexicor booth was a very busy place, with the North American Debut of the Medusa, and the rest of the product line being demo'ed.

In spite of the confusion with buyers and onlookers (and the hook-up problems for the VCR and the subsequent "disappearance" of their demo tape)... Yat took the time to swap out the board for one of the sale units, and sent me home with a brand new board, plugged into my original interface... with the promise of a free exchange for a totally new board if things failed.

I hooked it back up, booted up, and things were fine for about an hour... then the original problem resurfaced.

I gave Yat a call Monday, and he stepped me through a debug of the interface. It worked.

Suffice it to say, I'm sitting here with a NEW Nova card, debugged interface, at no charge to me. And we're talking about a board that was 9 months out of warranty. Thanks, Yat!

I'm currently playing with the filters in DA's Picture. Look for uploads. And look no further for great support.

I used to access AOL via a GCR on a MSTE some time ago and had no problems, per se. I found the interface to be pretty slow but that was probably more a function of baud rate than the emulation. I access AOL via a real Mac now and _still_ find it slow at 2400 baud. :)

AFAIK, the AOL access software should still work with a GCR. Perhaps others with more recent experience can provide more detailed information.

>Beg your pardon, my english is to bad !!!

Your English is a lot better than MY French, so don't worry about it. :)

Dave Small is the developer of the Spectre GCR Macintosh emulator, SST accelerator, and other products for Atari computers. His family had some serious medical problems resulting from accidents and illnesses last year but I don't know what his status is right now. His company, Gadgets by Small, is evidently in limbo and they are very hard to reach. Future (not to mention, current) support plans for the Atari are unknown.

Source record: 178662

In article agf@dux.dundee.ac.uk, rmccall@mcs.dundee.ac.uk (Rod McCall) writes:
>It seems that Atari are licencing most of their products to third parties
>firstly C-Labs with the F030 and now Sega. Does anyone know if C-Labs
>intend to launch a new F030?

AFAIK, Atari only licensed certain parts of TOS and F030 'technology' to
C-Labs. I don't think C-Labs has any intention of entering the mass market
computer business. If anything, they are more likely to produce special
purpose hardware to support their sequencer software, but I doubt if it
will be anything like a full-bore personal computer as is the F030.

>Also I understand Atari may have an F030 and PowerPC Falcon under development
>is this true?

I've heard the former as a rumor and the latter as a wish. I wouldn't count
on either, IMHO. I've also heard that Atari is supposed to demonstrate some
new products at an upcoming European (German?) computer show. Time will tell.

My prediction, such as it is, is that _any_ new computer products from Atari
will be based on the Jaguar chipset or similar technology. Atari has simply
lost too much market share, too many developers, and too many distributors
to return as a dominant force in the personal computer market again. Like
the saying goes, 'Once burned, twice learned.'

But again... I'd love to be proven wrong. ;-)

> > : >a 32MHz board? (This isn't a 'are you happy with it running this way'
> > : >but a test to see if you _are_ running with this system).

Unfortunately, a pure clean 16 MHz Falcon... =-(I will upgrade it as soon as possible (a financial question..) - but first I'll have to find out which accelerator would be the best for me.

Those cheap 32 MHz afterburners _are_ cheap, but their performance is far from a TT -which isn't a TOO fast computer, either..!

So - some 68040 board: Afterburner 040 or some Wiztronic 040-board sounds more inviting.. If the price will be human at all =-(

Does anybody know.. Will BlowUp and the like work with 030/040 accelerators?

Tommi

>box and the drivers from Lexicor/Computerinsel and the PC cards from
>a PC retailer at realistic, affordable price.

Christoph,

I would say that I do feel the need to respon to this post :),
to begin with you are paying for a 1.Modified VDI, a 2.ET-4000 (for regular
NOVA BOard, and 3. a NOVA Adaptor Board

You are also forgetting that the market is a very different one,
while an ET-4000 manufacturer speaks of a market of much larger size and
can therefore afford much better breaks, and larger quantity. There was
at least in the US a special for 350 U$D with some set of software for the
regular NOVA Graphics board, that may seem much for a PC User, but a PC User
doesn't need part 1) and part 3).

>(ever heard of a mass market)? But with the effect that a lot more ATARI
>users are satisfied with the capabilities of their machines and do not
>change their computer platform.
>

I would also like to point out that the term "mass market" does not apply in
the same sense of the word as say the PC Market. I personally feel you
draw unjustified comparisons but that is of course only IMHO.

On another note, the NOVA is probably still the best affordable quality
board around (says Mr.Lexicor of course :>)

Gert,

this test is done on different grounds than your original test for the following reasons.

1. you tested it at 800x600, I did it at 1024x768
2. I tested it on a TT with tos 3.05 as that is where it is plugged in, it also doesn't have Fastram which will explain the CPU performance specs.

It should however help you get some kind of comparison.

Yat @ Lexicor

]
```

There's already around a hundred files of various icons for Neodesk 4 on GEnie, a lot of which are duplicates, or swiped from other platforms (PC, Mac etc.). The majority of them are none too spectacular (well, the few I've seen so far haven't been anything great).

To get the files to GEnie, just upload them into the appropriate section (Using X-Modem :).

To stick them on an FTP site, you can usually just stick the binary LZH/ZIP/ZOO file in your local directory, FTP to the site, go into the pub/atari/Incoming or atari/Newfiles or whatever, and just type "put [filename.ext]" and it'll get there.

If you want, you can UUencode it and sent it to "boydm@atari.archive.umich.edu" with a description.

There are two desktop publishers to my knowledge that output a useable
postscript, those are Pagestream 2.02 from Softlogic and Digital ArtsLayout,
the latter being a lot better, and also a lot more expensive.

I suggest Pagestream if you only need b/w graphics and fonts.

I have heard that Calligrapher was meant to have posctscript, but cannot
confirm it.

John,

no offense but Calamus SL's "postscript" module is really useless,
printed graphics comes out in a garbled unusable mess. It's ok for text only,
but that doesn't fulfil the prupose of a "Desktop Publishing Program" for
text only. Otherwise it's a great program, but good postscript is
Pagestream and DA's Layout (and DTP System) that I have seen work.

Pagrstream also works on the Falcon I believe

Cheers

Yat

I doubt Megapaint will work, paint program that work fine are DA's picture, Prism Paint, Pixart

> - Phoenix 2.0

Hehe, that product runs 100% on the Medusa :), did you nkow you can get RD1 and 3D2 files for that on ftp.std.com in /pub/atari/Graphics/3D?

> - QED (a text editor)
> - GNU C/C++

Gnu works fine, Mint works as well, Magic too, geneva also, Linux I'd have to test it out...Neodesk and Ease appear to run fine, so I thnik gemini should run fine too...

Did you try contacting Lexicor France for French support? As you do need to get supprot in the same country (would be useful), the company Medusa

is in itself not very large but the system itself is met with a good success in Germany and suprisingly the USA!

Policies change depending who the support/distributor is in your area, Lexicor however does provide support for the system for as long as it exists :) to it's Medusa customers.

Yat @ Lexicor

I can only run the tests of graphics/display, not the CPU test which is
primarily what we are interested in for a Medusa System, and Rom test is part of
the CPU test unforunately.

I have run the Ness bench program..sorry for the unformatted mess I will
have to correct that soon.

>new newsgroup.
>

Lack of traffic is not a valid argument for creating a newsgroup, in most
cases that is. There are reasons for that, for instance EVERY announce
group has low traffic, because it is 1. moderated and 2. very specific,
the difference is that those are in general 5 or 6 or 10 or 12 posts that you
DO want to read, where as in c.s.a.st you will want to thread or skip
60-80% or less because it is not in your field of interest.

And let me tell you, high traffic bnewsgroup are more a pain than a blessing,
just forget to log on for a few days and you will need to kill everything or
spend the rest of your life on reading the newsgroup ;)

Just my thoughts of course..it's really all relative

>If we reorganize csast and csas into the optimal number of groups we
>should be able to minimize cross-posting and thus minimize the total
>traffic.

Below examples seem like a very good "revamp" of what it "should" be, however
it can be a real pain to re-organise everything, it should be done
gradually IMHO..

Yeah. But perhaps no developer is as daring as to launch an application
that will trigger so many reactions like: ``why is it so damn slow on
my 520st+?''.

Atarians should all have bought a TT years ago. Because many of us
didn't we're in the awkward situation that what we see around us is
simply not possible on TOS computers. The Falcon/TT market in itself
it too small for such a product, I tend to think.

You can get an Intel-based Linux machine for a price that doesn't even
buy you an old Atari. Put it next to your ST and use it to run
Mosaic.

Well, I hope this gives a little more realistic view of the Nova Card, you
almost got me ordering one !!!....

I took the 4.83 out of the RAM/ROM test, I guess it is close to the truth.
But all in all, it is still quite good !!
Do you happen to know what kind of card was used (inside) ?
The blitting is rather slow, but the scroll is much faster (hardware ?)

Gert

sheppard_r@kosmos.wcc.govt.nz (Roger Sheppard.) writes:

>So come on you Magazine Editors how about telling the truth for once...

If they/we did, better than half the readers and dealers would call the staff of the magazine traitors, among other things, and sales of the magazine would drop. A drop in sales wouldn't help anyone.

Atari users and dealers don't want to hear bad news -- they've already suffered through enough of it. And the thing is, nothing will be improved as long as users are, on the whole, blind to the situation.

It is all too easy to critize magazines for their being positive when they no other choice if they want to publish.

1309. Virtual Memory 1.1 (VMEM 1.1)

Newsgroup: comp.sys.atari.st
Date: 1994-10-21 00:11:56 UTC
From: npetrlik@public.srce.hr
Message-ID: <38710c$k3a@nippur.irb.hr>
Source record: 178680

Does anybody knows how to work with VMEM 1.1
using Atari ST 1040 (with MC68000 of course) ?

I've tried everything ...

Installing JARxx.PRG, editing original source file ...
but no results ...

So, if anybody knows something about it,
i'll be very grateful for some advice.

Thanx !

1310. ST stuff for sale

Newsgroup: comp.sys.atari.st

Since there doesn't seem to be a forsale section for the ST ...It's now been a few years since I got rid of my ST, and it's probably time to get rid of the books, programs, etc. that I kept in case I ever got another one ... If there's no manual listed, it's because I couldn't find it after a hurricane and two moves 8^). Here's the list:

Books -
original asking
Compute's Atari ST Volume 1: VDI $19.95 $10
Volume 2: AES $19.95 $10
Volume 3: TOS $24.95 $12
Abacus Atari ST Peeks & Pokes ..... $16.95 $ 8
Tricks & Tips $19.95 $10
Graphics & Sound $19.95 $10
Sybex Programmer's Guide to GEM $19.95 $10
Atari ST Basic Sourcebook (large format) offer
Atari ST Basic Sourcebook & Tutorial (small format) offer
Atart ST Owner's manual (dunno why I still have _this_ ...) offer

Mapping the Atari (8-bit) ..... $14.95 $ 7

Software -

Personal Pascal v2.? disks & manual ...? offer
Tackle Box ST & TB News 1&2 disks & lg. binder manual ...? offer
Prospero Pascal for GEM v2.151 disks and manuals ...? offer
Migraph Easy Draw v2.3 (disks & manual) ...? offer
GDOS driver disks for 24-pin & DeskJet ...? offer
Easy Tools (no manual) ...? offer
Migraph Touch-Up (disks only) ...? offer
FunctionZ function key labeling (disk only) ...? offer
PageStream 1.8 (disks only) ...? offer

Misc -
DeskCart (probably needs new battery), disk & manual ...? offer

Please reply via EMail as I don't usually read this group. Thanks ...

1311. Re: WP/DTP Package with Postscript output?

This may sound like a backwards step but you could always use an app
that functions with the old GDOS. There was a ps driver for this, at
least I managed with Timeworks. Any idea if Papyrus will work with
GDOS 1.2?

Dave.

Source record: 178684

Dave,
Over there in the UK you should be able to pick up copies of
ST Format or ST Review. That should help your friend order
stuff that he needs. I believe that the hard drive should be
easily connected to the ST but you need a host adapter like
ICD's Link cable. ICD also has hard drive software as does Atari.
Try to get in touch with a dealer to get the software needed.
By outputs do you mean video modes?
If so: with color monitor: 320 x 200 x 16 (low)
640 x 200 x 4 (medium)
with monochrome monitor: 640 x 400 x 2 (high)
Or do you mean what the ports are for?
The Atari should be able to read IBM-formatted disks (make sure
that they are not high density, though.)
Hope this helps.

I agree completely with David. The seemingly random cross-posting is
bad enough already, I don't need to read the same stupid "FOR SALE:"
articles in a 3rd group.

It's a pity there's no way to automagically mail the charter to someone
when they subscribe to a newsgroup.

1319. Re: OMEN

Newsgroup: comp.sys.atari.st
Date: 1994-10-21 03:09:24 UTC
From: millert@grad.csee.usf.edu
Message-ID: <387bd4$dj2@mother.usf.edu>
Source record: 178693

The problem I have with OMEN is that it seems to violate too many commonsense rules of user interface design. Plus, they didn't seem to put a moment of thought into that screen font. It's awful. It gives me a massive headache. Ever wonder why the ST's system font is so much easier to read than a PC's? Because the designer thought about how to make it confortable to read. Oh, and those windows are irritating to TRY to use.

Now, as for the rest of the OS, it's great. It multitasks well, fast, and when something crashes, the OS stays afloat.

I think they should massively rework that UI into something REALLY nice. Since they can make the internals of the OS work, they obviously have the programming skill, but making the OS work was more important than making the UI look nice, which is the opposite approach that Microsoft and Apple took with their OS's, and for that I have to commend the OMEN programmers.

I am interested in hearing from the elite TT030 owners that also use a CyRel Sunrise M16-1280 graphics card.

How, well does it perform?

Does it solve the dull graphics problems for the TT?

Does it work well with such programs a X-Boot, STalker, and First Word Plus (TT version).

What, about paint programs, picture showing programs.

I hope you netters can help me out. I need the hard facts about what I need to make the transition to this VME options.

] : : Is there a jpeg viewer for the Atari ST(520stfm upgraded to 2 1/2meg)
] : : I've got a gif viewer (fastgif, but I would like to view jpegs as I can
] : : get more on a disk
]
] : GEMVIEW springs to mind.....
]
] So does Seed of Light..

There's about 3 main viewers for the ST.

JPEG-View which will view in as many colors as the current resolution
can cope with. Quite fast & GEM-compatible, supports resizing and
limited dithering.

GEM-View will also view in as many colors as is available, but is
extremely slow. The end result however is about as good graphics-wise
as you're likely to get, colors are a different matter, on an ST it's
unlikely to be too spectacular. However, you could convert the JPeG
to a GIF or other such format and view it with Photochrome in 4096
color mode for a nice effect.

Speed of Light is probably the best bet, although it's not very
GEM friendly. It's stunningly fast, and displays more than the usual
16 colors, (or 256 if running in a compatible mode on a enhanced
machine/TT/Falcon/Medusa). It will also save the pictures out (In
16-colors) as a GIF, or other standard format. This is quite a good
utility!

JPEG-View views only JPG files. GEM-View views pretty much anything,
and Speed of light views JPG's, GIF's and most standard-ish formats.

Latest GEM-View is (I think), v3.08 (or thereabouts, I only
have v3.06).

All are obtainable in ./atari/Graphics/ on the atari.archive.umich.edu
FTP site.

Roger Sheppard. (sheppard_r@kosmos.wcc.govt.nz) wrote:
> So come on you Magazine Editors how about telling the truth for once...

They won't. You see, telling the readers the truth means making
them consider other computers even more than they already do,
and eventually making them buy their next computer sooner
than planned - and then the magazine loses a reader, i.e. money.

But it's true, the Atari market is changing into a hobbyist
market like it happened for the 64. There will still be a lot
of Ataris around, and certainly a lot of activity, but the
exciting things will happen elsewhere (if Atari is lucky,
in the games console market).

BTW, since we do no longer receive rec.* here at our site,
I haven't heard anything about the Jaguar for a long time.
Would anybody care to summarize how the Jag is doing in the
US currently?

[SNOVA Benchmarks and gert's calculations]

>Well, I hope this gives a little more realistic view of the Nova Card, you
>almost got me ordering one !!!....

Gert,

I did another test in 1024x768 in 256 colors this time WITH
comparison to TT with FPU, your examples were fairly close, HOWEVER your
CPU calculations were not quite correct. Graphics don't divide by 4.83 either
just because it's Rom/Ram test. :) The CPU is slower, I have noticed variable
speeds on different TT's..

>
>I took the 4.83 out of the RAM/ROM test, I guess it is close to the truth.
>But all in all, it is still quite good !!
>Do you happen to know what kind of card was used (inside) ?

Mach32, 2 Megabytes VideoRAM

>The blitting is rather slow, but the scroll is much faster (hardware ?)
>

It has vertical and horizontal hardware scrolling and accelerated..

Here's a new test this time reference TT + FPU notice how the CPU performance
is notably slower, but the graphics is 318%!! in 1024x768 > 72Hz this is
important infact.

```
GEM Bench v3.28c = Ofir Gal 28.9.93
===========================================
TT 030 TOS 3.06, MiNT not present
Blitter not present, NVDI not present
Video Mode = 1024 * 768 * 256 Colours
LineF FPU installed
Run and Malloc from FastRAM
Reference = TT + FPU
===========================================
GEM Dialog Box: 1.015 312%
VDI Text: 0.785 556%
VDI Text Effects: 3.585 202%
VDI Small Text: 0.645 637%

Atari did bring out a Kit to upgrade these older machines, the Kit included
a HD Drive, Ajax Chip, New Gal, Mods to PCB.. etc...

May be you can still get the Kit does any one know.....

GFA Basic v2.0 is Public Domain, right ... in that case, is it somewhere on the 'net, or would some kind atarian like to put it somewhere? All I really want (at the moment) is GFA Basic 2.0 (since i've got the compiler).

> Even though the compiler is pretty simplistic, I'm sure Bob (the

: Thanks.

Best has to be APEX MEDIA software, out this (or next) month from Titan Design. F-Zero (a new vector shoot-em-up from Caspian Software) is also nearly complete, a demo is available via FTP. Llamazap get's kicked into release at the FES this year (at long last). I hear that Musicom III is coming along very well too (but you never heard that from me, ok?).

Plus a new version of Digital is being worked on, allows you to enter the music via a score sheet (like StormTracker but with a few more channels!).

There is also a special program called ScreensPain soon to be released commercially which is for programmers, it allows you to define your own screen resolutions and then dumps out the code for you. Should be very useful when it appears.

The Lazer Convention is due in November so we can expect some stunning new demos from that! Plus EKO are working on a game called H20 which is likely to be quite stunning indeed.

As for the more serious application side, can someone else help? I guess an upgrade to Xenomorph 2 is required (badly required, due to large bugs in the current version), but who knows?

Message-ID: <3889f4$n3q@bs33n.staffs.ac.uk>
Source record: 178614

OK here is some _very_ interesting news for you.

Gremlin Graphics platform rival to Sonic, Zool, has been converted to the Falcon. It takes full advantage of the improved hardware and sound and will be a joy to any arcade fanatic.

Gremlin are not releasing Zool directly, instead Silica Shop have bought the rights to it and are going to bundle it with a new range of budget price Falcon's (although when no-one is sure). The game is 100% finished, Gremlin confirmed this over the phone, and Silica have copies (they also confirmed this over the phone). The big question now is.... WHEN?????

Hi !

Does anybody knows which is the best program
for communication with modem for ST 1040 ?

Rufus isn't so good ...

Thanx for reply ...

1336. Obsessive pinballing!!!

Newsgroup: comp.sys.atari.st
Date: 1994-10-21 11:48:17 UTC
From: andrewc@cogs.susx.ac.uk
Message-ID: <3889q1$283@infa.central.susx.ac.uk>
Source record: 178613

Today I had the good fortune of playing a demo of Obsession, and pinball game
from UDS, and I had to say that I thought it to be a VERY good game.
The colours were stunning and I could not se any fault with the graphics. The
sound is amazing, it useses overscan and (i expect) hardware scrolling.
The demo is just one table with the full game having four, and a data disk
containing more tables will be out shortly after the game.
You can not use it on a standard ST, it is only STE and above.
I used the demo with NVDI, NeoDesk 3, a hardware clock, from a hard drive and
found no trouble with it at all.

This is the kind of thing we need to see a lot more of.

I have the demo, which can be freely distributed, but I do not know how to
upload to an ftp site. If anyone has a demo of this and can upload, then
please do because everyone needs to play this, or, alternativly, tell me how
to upload and I will, (if of course it isn't at a site already!)

Andy

I think that won't work because GFA is just supporting their BASIC for the PC platform anylonger.
They won't support ATARI anylonger.

I saw GFA-Basic for WINDOWS some time ago and it looks really good but I think there's no hope for us...!

OK, it's right that the ATARI market is very small. But how many NOVA
cards have been sold until now? And how many STE/TT users, i.e. people
who could be interested in a graphic card, are there? I suppose that
the _percentage_ of ATARI users who own a NOVA (or comparable) graphic
card is very small.

Here, the term "mass market" as a relative notion. In pure numbers,
the amount of potential graphic card buyers is small. But related
to the amount of the people who already are owners of a graphic
card, it is quite large. I cannot prove this, but I don't think
that I can be proven wrong.

Regards,

Christoph

Erm... he's not the only one hunting for Lattice C. I take it he's looking for the old versions, which Hisoft have sold out of fairly recently at 40 quid a go.
169 quid (30% discount for students if you order direct from Hisoft -increase that overdraft!) for the new v5.60 from Hisoft is a bit out of order really.
I'm waiting for the London Earl's Court computer show next week, in the faint hope of anyone flogging old versions off!

Sorry I couldn't be of much help but I'll post you or anybody else if they're interested if I score searching software distributors up and down the country and at the show.

1352. New files at HENSA (21 October)

Newsgroup: comp.sys.atari.st
Date: 1994-10-21 16:33:01 UTC
From: vctec@westminster.ac.uk
Message-ID: <Cy17B1.M9A@westminster.ac.uk>
Source record: 178620

Well here it is...my latest installment of duh duh duh....New files at HENSA for the past week....

thank you...thank you...no more drum roll needed...

You will probably notice on some of the files...that there is a new thing with the description.....in the brackets...

This was due to some feedback from someone, who pointed it ou, that he wanted to know what language the programs were in. I liked the idea.so am implementing it, as of today. Thanks Steve Wells...

I think you can work out what they mean...

Dan.

> That'd be too cool

Sorry, perhaps I was not clear. If a drive has the centronics-style
connector, the Link/Link2 will plug right in without any other cables or
adaptors needed. There are several common types of external SCSI connectors,
and if you got one of the other ones you would need an adaptor cable to
be able to use the Link/Link2. So, a centronics-style connector is highly
desireable, but does not remove the need for a host adaptor. Think of it
this way:

```
+-----+ +---------+ +------------+
|SCSI | | Host | | Atari ST |
|drive| <------> | Adaptor | <----------> | |
+-----+ ^ +---------+ ^ +------------+
| |
SCSI spoken ASCI spoken
here here
```

So you need a host adaptor no matter what, unless you have a TT or Falcon
(which have a SCSI port in addition to the ASCI port).

```

There is at least one program that can save 1290x760 screens (even if it
is just a virtual screen from MonSTer). I believe it was smart and asked
the machine for the resolution, and I seem to remember that it saved in IMG
format. It was reviewed in a Current Notes issue. I'll see if I can find it.

>They won't support ATARI anylonger.

Actually, I don't hold out much hope for GFA surviving in the PC world, either. It's really a shame, too, as their GFA BASIC versions for DOS and Windows both show a lot of promise. Unlike the 'brain dead' Microsoft Visual Basic which has taken the market by storm, GFA's products generate a true executable with no need for a huge runtime file. Both are quite fast, too (much more so than VB). In typical GFA fashion, however, their documentation is the pits and pales in comparison to the quality MS VB docs, not to mention the huge glut of third party support in the way of books and software add ons. In case anyone is wondering, it is NOT a trivial task to convert a large Atari GFA program to GFA for Windows (DOS is a bit easier). The language is similar, yes, but the difference in the OS is huge and GFA's lousy docs don't help the situation.

1357. LPMUD

Newsgroup: comp.sys.atari.st
Date: 1994-10-21 17:01:25 UTC
From: azog@world.std.com
Message-ID: <Cy18ME.7A7@world.std.com>
Source record: 178625

Has anyone played with LPMUD for MiNT? I am a little familiar with
LPMUD for Unix, and have compiled it under Linux and/or NetBSD,
so know a little about the internal operations, but am having
a hard time dealing with this version.

First off, when I extracted the distribution, in MUDBIN there were
two files: driver.tos and front.tos. Assuming that front.tos is a
front-end of some sort for LPMUD, I ran driver.tos first, and it
loaded a bunch of objects and some rooms. The last status I get is
'setting up ipc'.

Then I run front.tos, and simply get a memory violation, and it
quits. How do I connect to it? For a 'real' LPMUD, you usually
telnet to a defined port, but I havent seen anything like this.
Mostly because there are no docs.

Note that I am running both of these in seperate windows under
MultiTOS (1.04, I think. I havent gotten 1.11 installed right
now, tho I did compile it)

Thanx

If you have WWW access, go to http://www.nl.net/~zfc/Atari/DriveU/
and click on 'Midi and Music'. You'll find anything on Midi/Music
in over 10 ftp sites. The number of sites covered by 'Drive U' will
slowly increase to finally cover the world (but that may take months).

Why post something to comp.sys.atari.st when everybody who can read
that group also has access to comp.binaries.atari.st where it really
belongs? I don't understand.

So once again, send binaries to

avg@cwi.nl (comp.sources/binaries.atari.st moderator)

or post directly to

comp.binaries.atari.st.

> if C-Labs intend to launch a new F030?
Atari aren't licensing to Sega, just making them pay for Patents they have
infringed. Atari were first with many, many ideas in the gaming world and
have patents on all kinds of fundemental stuff ike scores on screens etc.

> Also I understand Atari may have an F030 and PowerPC Falcon under
> development is this true?
I doubt it seriously. If there are new machines, they won't be from Atari.

Iain

1368. Atari 520 ST for sale

] Atarians should all have bought a TT years ago. Because many of us
] didn't we're in the awkward situation that what we see around us is
] simply not possible on TOS computers. The Falcon/TT market in itself
] it too small for such a product, I tend to think.

Bwahahaha, that's a good one. A lot of people bought ST's because
they were cheap. TT's were/are NOT cheap, quite the opposite!

Extremely good machines if you've got the cash, but they just weren't
worth what was being charged for them.... (What they cost at the moment,
I'm unsure although AFAIK there haven't been any new ones made for
quite some time). Just buy a Mega-STE & throw a 32Mhz 68030 into it
or something! :)

1370. Spectre and Adspeed?

1372. Apparent problem with linking MiNT libs using older version of gcc

Newsgroup: comp.sys.atari.st
Date: 1994-10-22 02:15:33 UTC
From: mmiller@nyx10.cs.du.edu
Message-ID: <389sk5$hk4@nyx10.cs.du.edu>
Source record: 178644

I am running MiNT 1.10 on a Mega 4 STe on a minix file system. I am using gcc 2.3.3. PL 2.

I am having a problem linking newer libraries using the gcc version I have. I used to have the libraries that came with gcc 2.2.2, but early this year like in January or February, I upgraded the libraries to the most recent version at that time. They seemed to work fine, until recently.

I tried to compile a program that input and output float and double numbers, using scanf() and printf(). It compiled and linked fine. The problem came when I tried to run the compiled program. It would crash with either a Bus error or Illegal instruction error. When I tried to compile and link a program that printed integers or strings with printf(), it ran fine. I compiled a program with float and double number calculations, but no I/O, and it ran fine, so I assumed there was a bug in one of the libraries containing printf() and scanf().

This week, I downloaded the most recent version of some of the MiNT libraries: gnu, gnu16, iio, iio16. I kept the rest of the older library package files in /usr/lib, and put the new libraries I got in /usr/lib as well. I tried relinking the problem program. Again, all I got was an Illegal instruction error. I tried a simple "hello world" program with the new libraries. Again, all I got was Illegal Instruction error, just from using printf() to print a string!!

Do I need to get the rest of the library package in order for the libraries to work? I didn't want to download the whole new library and have the same problem, so I just downloaded some of them where I thought the printf() and scanf() functions were. Do I need to get an older version of the MiNT library package that is compatible with gcc 2.3.3? Are the newer versions not compatible with gcc 2.3.3?

Thanks,

---Mark

:-)
It has to run under MagiC for Atari-Machines and shouldn't do hardware accesses. (Most) BIOS and XBIOS are of course allowed.

[...]

>May be these GEM type programs are OK when you use a TT and NVDI, but to me
>that is not the point, they should be fast to start with...

I use CoNnect now, on my Falcon. prior, when I had an STe, I used Uniterm,
which I still consider excellent. Problems I ran into with Uniterm on the
Falcon, is that I often changed screen rez, and using a SccreenBlaster.
Uniterm didnt deal too well with some of the higher rez' that Ive become
accustomed to, that half the screen would be the terminal, and the ohter
half was dead, and pressing the HELP button was useless.

Using CoNnect on my Falcon in any rez works fine, as I can resize the window
for my ease, and use larger font sizes in higher rez...

I dont have NVDI (yet), but in 2 colour mode, the screen is very fast.
Its reasonable in 16 colour mode, but 256 forget about...

: desperately need to run my UUCP on a minix partition!

Oooops, i thought that most "MiNT-people" have already compiled and installed
all the necessary software to run UUCP/News/Mail.
Anyway, i just compiled Taylor UUCP 1.05 on my Mega4. Seems that everything
works fine. If you really need it, i could send the stuff to the Net after
i did a little more testing.
As far as i know, there are already ports of ELM and TRN available for
MiNT. (ftp.cs.tu-berlin.de). A port of SMAIL is available in Bremen.
For News-processing, i personally use the WNEWS-Package, although i've
heard that some people already ported CNEWS and INND. (Hello Juergen ;-))

Ok, I need a lot of help. I'm a long time atari user, but rather new to slip (but not to internet).

I'm running an Atari ST with 2 disk drives and 1 meg of ram.

(OK, so I'm out of date...)

ANyway. Is there a slip program I can run? Popmail?

If so where to I get them and what do I need to make them work?

Also, what is MiNT? I'm really out of it on all the new ST stuff.

Thanks.

>preferably? Thanks.

I'm not sure if this is the version you mean or not, but there is a
rather good port for the ST including docs, macro scripts etc. from a
site which from memory is, ftp.icce.rug.nl in the directory
/pub/tom/jove. There is also a port for MS-DOS and a source file
distribution for Unix as well. This version a different branch from the
"standard" jove development line, but wroks very nicely!

Hope this helps.

Apparently there have been TT made in the last year.

As to your second point - I had a MSTE and very nearly did throw a 32Mhz 68030 into it (a PAK3/33). However its honestly not a lot cheaper than a second hand TT, *especially* as you then still have the MSTE to use or sell. Needless to say - I bought a used TT (and sold the MSTE).

:-)

I regards to your question about getting America On-Line, I have it on my Atari Mega STe in Mac emulation with Spectre GCR. Just get into Mac emulation mode, load the software, and have your modem plugged into the modem (serial) port. To my suprise, it worked like a champ. AOL software is only available for PCs and Macs. No support for Atari computers. As for those who say GEnie is better than AOL, I disagree. GEnie may be better for Atari stuff (although I found it confusing to find and download files), I find AOL more useful as an all around entertainment/information/communication service.

I'm having some problems with GCC 2.5.8: the C++ libraries, specifically
iostream and cout, don't seem to be getting linked properly.

I can use the C compiler fine but the C++ code:

```
#include <iostream.h>
int main( void )
{
cout << "Hello there.\n";
return 0;
}
```

compiles fine but the linker reports that _cout and operator<<(...) not found.

Any suggestions?

THanks.

>
> Bwahahaha, that's a good one. A lot of people bought ST's because
> they were cheap. TT's were/are NOT cheap, quite the opposite!

And in any case, Atari just couldn't deliver TT's. I had orders several times of upwards of 30 - 40 machines per customer to various large companies that thought this was what they needed, all when TT's were in "full production". Atari always replied when I tried to get deliveries that, "Gee, well that's nice! We can maybe supply you with about 4 or 5 machines if you're willing to wait 3 or 4 months." In the end one could perhaps get 1 or 2 machines after 5 or 6 months. Obviously the customer had long before cancelled the order and gone for PC or Mac.

A real shame. If deliveries had been possible, quite a few multinationals would today be TT-based in their desktop systems.

I notice that the new-look ST Review incorporates eight pages' worth of ST Action inherited from ST User. Now, it seems to me that if ST Action had been any good it wouldn't have been closed down and incorporated into ST User in the first place. So why must it now be passed to ST Review like a parcel with extruding wires and a distinct ticking sound?

I have a friend who replaced his internal floppy with a 2sided standard
hi-density IBM drive, available at any of hundreds of places for about
$50.00. However, you won't be able to utilize the hi-density (1.44meg)
with the Atari's controller, and also he had to cut the frame to
fit the eject button on the new drive. It works great though.

If you have TOS 1.4, you simply need to set the "autostart" attribute
using the "show information" dialog box from the desktop. If you have
TOS 1.0 or 1.2, you can use startgem or headstart (both small auto folder
programs, and both available from atari.archive.umich.edu) to autostart
GEM applications at boot.

] Does anybody knows which is the best program
] for communication with modem for ST 1040 ?

What's it going to be used for? Net access, BBS-ing...?

Storm
Uniterm
Rufus
Connect
FreeZe Dried Terminal
Ansiterm
Teddyterm

They're the main ones I can think of that are PD/Shareware, all should be available on atari-archive (atari.archive.umich.edu), for use on a standard 1meg ST, the ones to look at would be, Storm, Uniterm, FZDSTerm, Ansiterm & Teddyterm. Ansiterm is only really good if you do a lot of ANSI-BBSing as that's it's main purpose (16-color ANSI on an ST). The rest you should have a look at & see which you prefer. FZDSTerm isn't supported anymore AFAIK.

Because the original magazine was far too expensive for the low quality
item that you got, and all 3 magazines are done by the same people
(Europress). As long as you don't have to pay extra, then it's not too
much of a problem! :)

It's a bit sad for ST-Review which at the moment is the best ST magazine
around, (and has been for a long time), to have this insert bogging
it down....

: > -rw-r--r-- baldrick 4420 Oct 3 19:16
./Network/Midi/mdneteng.zip
: any descriptions for these programs?

Descriptions of almost all files can be found in the 0index of
the section. So for descriptions of these programs look under
Network/0index. That's the general system at a.a.u.e.

mdneteng.zip is a translation I did of one of the doc files and
the .RSC to Medium Net. You still need the other medium net archive to
use it. Medium Net is a Midi Networking system.

uucpv2 and bsnews, are both for use with D. Beckemeyers
MT-C-SHELL. (commercial product). I might be wrong about this though as
I'm going from memory right now. uucpv2 is of course the uucp system and
bsnews is a news system.

Suppose this is _Not_ a joke, then all we can wish is that when Falcon games finally appear, if ever, people really BUY them - not steal..!
Quite important, I think...

> Gremlin are not releasing Zool directly, instead Silica Shop have bought
> the rights to it and are going to bundle it with a new range of budget
> price Falcon's (although when no-one is sure). The game is 100%
> finished, Gremlin confirmed this over the phone, and Silica have copies
> (they also confirmed this over the phone). The big question now is....
> WHEN?????

Budget Falcons..? Not those 1 Mb machines..?? There shouldn't really be an 1 Mb Falcon model in existence; even 4 megs are often too little =-(

Btw; does anybody know what happened to TORNADO flight sim for Falcon/ST..? (Digital Integration) - and those other games planned ?

Is there any version of Sensible Soccer that works on Falcon reliably, with BACKWARDS emulator?

There is an editor program (Public Domain) for Amiga 8-(available for MICROPROSE FORMULA ONE G.P. IF, if and if... anybody happens to know the author, it would be VEEEEEEEERY nice to have it converted for Atari, too!
Also, a hard disk installable, Falcon-compatible F1GP would be a dream come true. As MicroProse apparently hasn't got any interest for us anymore, is there anybody who could write some modification program (patch or something) to make this great program more Falcon and HDD friendly..?

As there are over 50.000 of us, owning a legal F1GP, I can't be the only one wondering these things - or can I..?

Thanks for any help and info !

Tommi

> > ST-emulator - and if yes, with which settings...
>
> This was mentioned in a past issue, and the reply was along the lines of
> "we review ST games on ST's, not Falcons". Not my opinion, mind you :-)

I'm very sorry to hear that - but glad that it isn't your idea ;-) ! Sometimes it feels like some ST-owners don't consider Falcon as any "ST" at all, but instead something strange and hostile. Well, literally speaking, F-030 isn't any ST - that's true enough - but still... It's an Atari, the newest, and (many think) the best one yet. So why not support it? Who benefits if people don't buy Falcons after they grow out of their STs, but some PCs and Macs? Whoever benefits is not any Atari owner.. =-(!

So... Let's review ST-games on ST computers. Good. But since there are few Falcon games, we _have to_ use ST-games, too... And as nobody bothers to tell us, if they work or not on our machines, who wants to risk his money and buy those games? This IS a problem, I think..... And I'm really surprised if so many people don't realise how serious a problem this is.

> I agree. I do most of my screenshots in ST-high, but mono grabs make a
> dull-looking mag if they're used exclusively. If I had an 030, I'd use
> it for screengrabs :-)

A very good idea, that... So, how could we get you one ;-) ?

BTW, a HiSoft Basic programming course would be nice in STF.... Some more advanced stuff, too - like DSP programming in HSB2, etc.

Beers =-) !

Silica may be opening Atari shops in the UK but until they get their act
together and give SOME support to the people that phone/write with queries and
orders for kit thy wont get far.
As for ST Format has anybody else had troble with cover disks?
4, count them FOUR times this year I have had cover disks that had errors on
them. OK STF replaced them (on one occasion it took 2 months to come thru) but
this last month it was a 2 cover disk pack (+ "wonderdisk" for subscribers)
not one was there, yep all three missing! STF please get your act together or
you too will go the way of STU

Hi everybody, Here's THADOSS/DUNE

Some news about DUNE:

- we're finishing a wolfenstein game(we need graphs but the game is running).

- we're finishing the 'ILLUSION DEMO' (still a few things to change)

- we're finishing the 'FAITH DEMO' (I've finished all the code yesterday), and it'll be swapped in one or two weeks.

The ILLUSION will be swapped in one or two months.

- We're starting a Falcon demo (a few effects are already running)

If you need more informations, contact me:

AtariWorks is an integrated word processor, spreadsheet, and database package (like Claris Works on the Mac or MS Works on the PC) and is published by Atari Corp. It also includes SpeedoGDOS v4.1 for outline fonts. It'll run on any TOS-based computer with at least 1MB RAM (it BARELY is operable under 1MB, so 2-4MB is preferred). The MSRP of AtariWorks is $129.99 (I think) and can be bought from Atari computer dealers for as low as $90 or so. Problems with it are minimal, the biggest one being the "Black Page Syndrome" which seems to happen when you don't have much RAM left.

Fair enough; we need a general group. There wouldn't be a lot of point
changing csas to comp.sys.atari.misc, so perhaps we should just
consider splitting csast into the various sub-topics.

You are correct, which is why I suggested a set of slightly broader
topics than the ones you mentioned which would cover all the
ST/STE/TT/F030 models. ie they are pretty much application-specific
and not platform specific.

The new group names I suggested were intended to cover /most/ of the
current topics in csas and csast although I'm sure I've missed some.

It is.....works very well in extended screen modes - unlike Calamus 1.09
which gets it's knickers in a twist on a colour display....

I really miss the speed of Calamus though - Pagestream is soooo slooow,
even on a 32MHz f030 with NVDI.

I think the problem I'm having could be related to my only having TOS4.02
not 4.04 ? You see, I'd already used OMEN 2.46, and know very well how to
start it up (using ST High) but that isn't the problem......even when you
do that it f*cks the display when it's started.

Craig.

How about a comp.sys.atari.this.is.getting.ott

Why is it no-one can agree on anything? If someone comes up with an enterprising idea (such as .programmer or .falcon) it gets shot to hell before it even has a change to breathe. All this trouble with cross-posting could be avoided if people put a little more thought into where they wanted their post to go. If Atari themselves can recognise the need for change why can't we?

The Mugwumps sure did a good job on Cycedelic Knockout, the great Star Trek intro sequence and the superb 8 channel DSP music. Quite something. Better than your average demo.

Apparently it would have been longer (ie they had more effects) but the module wasn't long enough. Also they are not working on a demo at the moment :(but a programmer utility called Screens Pain. Let's hope the NLC convention in November can bring us some more demo treats.

From: sanders@sci.kun.nl
Message-ID: <Cy6Fwv.v3@sci.kun.nl>
Source record: 178423

Hello,

The VIEWER.APP I got with my Falcon doesn't work. For small files, I only get some kind of a bitmap picture of an eye (at least that's what I think it is) and nothing else. The desktop shows through the top few lines. For large files, I can move the slider down and up once and thus read the text. Anyway, I'm not too satisfied with this VIEWER. I can't even use the cursor keys or spacebar to scroll.

So, what kind of viewers are y'all using? Guck perhaps? Or do I have to hack one up myself (would be a sensible first-project on my new Falcon...)

Greetings,

From: sanders@sci.kun.nl
Message-ID: <Cy6G5r.11D@sci.kun.nl>
Source record: 178424

Hello,

Trying to get my `old' working environment (just MiNT, not
MultiTOS --- more speed, you see :-) I did what some people on the net
here advised: I renamed MINT.PRG to MINTNP.PRG and installed the
`old', small GEM.SYS I copied from my ST.

The thing booted fine, but when I move the mouse, several `ghost
images' of the pointer move along, and the computer hangs after a
while.

What's happening? It this the `mouse droppings' problem I saw
mentioned on the net some time ago (and which I can't back-read
anymore, as you can guess... :-)?

BTW, I get an Adress Error (or was it a Memory Violation?) from my
good old `ls' in a Mintshel window. I have an even older version that
does work, but lacks many features. Where can I find a working `ls'?
(It worked fine on my ST with MiNT 0.95, BTW)

Thanks in advance,
Sander STOks

1449. Problems with Motorola modem

Newsgroup: comp.sys.atari.st
Date: 1994-10-24 13:32:06 UTC
From: epdouden@cs.vu.nl
Message-ID: <Cy6IxJ.qo@cs.vu.nl>
Source record: 178426

Hi!

I've got a serious problem with a modem I bought some days ago, model Motorola/UDS V.3240i LCD STD (230V). It's a 9600bps modem. The modem is not a new one, so I don't have the manual ('lost'). It has a very strange problem....

Connected to a PC it acts real nice. No problems uploading/downloading. Ok, fine. After that I tried to connect it to my ST. Yes - that's right... IT DIDN'T WORK! So I tried it on my STe. Same problem. For problem details, see below but here's some info about the configurations I used.

PCs: old 8088 Sirex with Telix 3.15
homemade 386/40 with Telix also.
STs: 520STfm, 2.5 meg internal, Megafile 30, 2nd DD, TOS 1.2
1040STe, 1 meg, no HD, TOS 1.4

Please mind the following things:

- both PCs are 100% (completely double-checked by my father)
- both the STs are 100% (also checked)
- I am already using RS232ENC.PRG handshake enhancher (version 1.03)
- I tried Flash 1.6 as well as Rufus 1.11 release 6
- all the cables used are expensive 'real' RS-232 cables and checked (I even used different cables)
- my old modem (Bausch 3522SA, 2400bps) has no problems with my STs
- even with ALL my ACCs and so disabled it DIDN'T work

The modem seems to act like a RS-232 modem. Not 100% sure. Maybe this can help. (E.g. Macs and NeXTs are using RS-422)

Modem's behaviour (the REAL problem)

Normal situations:
1. The modem says 'V32 9600 IDLE' (it has a LCD screen!)
2. Dail a number. Modem says 'DAILING'.
3. The other modem picks up the phone. The modems just make some 'beeps' to another, I don't mean the 'jelling' later on.
4. Then the modem says 'TRAINING' and they start 'jelling'.
5. Finally, it says 'ON LINE' and prompts the speed (V22 2400, V32 9600 etc)

Now for the STs:
1. Modem is 'IDLE'
2. I dail a number. It prompts 'DAILING' and really dails. No problem.
3. The other modem picks up the phone. Great.
4. My modem makes just ONE beep to the other modem and HANGS THE PHONE!
5. It prompts 'IDLE' again.

6. The terminal program (Flash, Rufus) says: 'Modem reports no carrier' or something like that...

I tore my hair out for ages on this one.... ANYBODY?!?!

Megatons of thanks in advance, Ewout Pieter den Ouden

Raymond,

-> I am interested in hearing from the elite. TT030 owners that also
-> use a CyRel Sunrise M16-1280 graphics card.
-> How, well does it perform? Does it solve the dull graphics problems
-> for the TT?

It performs very well... and right now there is a special promotion going on and the cards are selling for just US $545 (down from $895 before)!

-> Does it work well with such programs a X-Boot, STalker, and First
-> Word Plus (TT version).

Yes it does. However, there are a number of different configuration on how to use X-Boot with the card.

-> What, about paint programs, picture showing programs.

GEM-View, 1ST-Guide, Papillon, DA's Picture, Chagall, Calamus, Cranach, Studio Photo, KandinskY, Page-Stream and many more all work with the card.

-> I hope you netters can help me out. I need the hard facts about what
-> I need to make the transition to this VME options.

If you have any more specific questions, please send e-mail to:

cyrel@cybercube.com or cyrel@interlog.com or cybercub@genie.geis.com

Ralf.

Hello,

If you are using a Falcon, the best choice available to you is MasterBrowse. As the author, of course I _would_ say that. It is true, though! If you want a fast GEM text file viewer that will work in any resolution and multitask nicely, then MasterBrowse is the choice for you. It is available at atari.archive.umich.edu as mb48_bin.lzh or (probably) ftp.tu-clausthal.de with the same name.

MasterBrowse has a lot of features; here is the list:

```
M a s t e r B r o w s e 4 . 8
""""""""""""""""""""""""""""""""""""

""""""""""""""""""""""""""""""""""""""""""""""""""
" The *BEST* ST/STe/TT/Falcon Text File Viewer "
""""""""""""""""""""""""""""""""""""""""""""""""""
" MultiTOS, Geneva, & Mag!X Compatible "
""""""""""""""""""""""""""""""""""""""""""""""""""
```

o MasterBrowse has a friendly, easy-to-use, 100% GEM automated installation program.

o MasterBrowse has an extremely fast GEM user interface, which makes use of raster copy screen updates, GDOS/SpeedoGDOS fonts, pull-down menus, windows, windowed dialog boxes, colour, round radio buttons, checkboxes, keyboard shortcuts in dialog boxes, and more.

o MasterBrowse works with MultiTOS, MultiGEM, Mag!X, and Geneva. With MultiTOS or Geneva, MasterBrowse can ensure that only one copy of MasterBrowse is in memory at a time. If another copy of MasterBrowse is launched, the copy of MasterBrowse already in memory will be instructed to display the files. The utility that makes this possible (the "client-program") can be configured to call an alternate viewer for special types of files, such as pictures or sound files.

MasterBrowse also understands the MultiTOS Drag & Drop Protocol.

With Mag!X, MasterBrowse can communicate with the desktop to ensure that only one copy of MasterBrowse is in memory at a time, as with Geneva and MultiTOS.

o MasterBrowse can use the command line to open documents (or to open a document batch). The ARGV, xArg, and standard command line formats are supported.

o MasterBrowse supports the View Protocol, by Peter Seitz, which allows other programs to instruct MasterBrowse to display a file instead of using their own default viewers. Currently, the following programs support (or soon will support) the View Protocol: STZip, Lharc Shell, ShowImage, GemView, and DiskList.

o MasterBrowse allows you to have a virtually unlimited number of documents open at the same time, restricted only by the number of available windows and the amount of free memory.

o MasterBrowse provides keyboard shortcuts for every menu entry. If you do not like the default keyboard shortcuts for menu entries, you can change them to suit your needs!

o MasterBrowse provides you with a Quick Document Access feature found in no other program. With this feature, you can instantly load any of the last seven files that have been opened (in case you need a document again after closing it).

o MasterBrowse allows you to (optionally) save your configuration automatically when you exit the program, or even save a document batch that will automatically be loaded the next time you use MasterBrowse.

o MasterBrowse allows you to use all of your familiar movement keys. You can use the arrow keys, the application keypad, or even the space bar and the return key.

o MasterBrowse allows you to move in any direction inside a document, as you would expect. What you might not expect is that you can tell MasterBrowse how far it should move when the movement keys are pressed. How about moving two lines down instead of one? Or perhaps three lines suits you better?

Do you still want more power? Keep reading.

-You can jump to a specific line, a specific page, the start of a block, the end of a block, or any of ten personal "bookmarks" that MasterBrowse supplies for each text window.

o MasterBrowse allows you to move through a document (by lines or pages) using a special Quick Scroll Mode. It uses the shift, control, and alternate keys so that the scrolling speed is not limited by the key repeat rate.

o MasterBrowse offers unparalled power when it comes to searching!

In addition to the ability to search for up to three strings at the same time, starting at the top of the document or at the current position within the document, MasterBrowse allows the use of Unix (TM) regular expression matching (wildcards).

A search may be conducted in reverse mode or forward mode. If you desire, you can specify which of the three search strings will be case sensitive and which will not.

o MasterBrowse also has powerful block operations. You can mark a block and then save it to disk, print it, or write it to the clipboard. You can control how the block is marked on the screen. MasterBrowse can also be configured to remove the block markers after a block operation is completed or to leave the markers unchanged. Blocks are marked using the -MOUSE-, exactly as they are marked with text editors. More? A block can even be extracted from a larger document and placed inside a MasterBrowse window with a single keypress! In addition, MasterBrowse can append blocks (or entire documents) to already existing files.

o MasterBrowse is a master printer. It can print a document (or a block) with page headings, page numbers, line numbers, a description of the file or block, a synopsis, or any combination of the five. MasterBrowse can even print an identification string for those people who share a printer between more than one computer. You can also save a block or an entire document to disk (or the clipboard), with all of the same options available. MasterBrowse can even be configured to use the special features of your printer, such as bolding, italics, underlining, colour, and specialized fonts.

You want even more power? MasterBrowse can print on both sides of the printer page, and indent your text.

o MasterBrowse gives you complete control over your windows. You can cycle through them, change their titles, shrink them, close one, close them all, or get information about them all using the keyboard (or the mouse). MasterBrowse also allows you to remove the vertical window scroll bar, the horizontal window scroll bar, or both scroll bars (since a window that has no scroll bars can scroll more than twice as fast as a window that does have scroll bars). In addition, each MasterBrowse window can have different scroll bar settings. The size of a window can be changed by clicking in the bottom right-hand corner of the window, even if the window does not have a "sizer" gadget.

o MasterBrowse supports batch files! If you use a certain group of documents often, just load them up and tell MasterBrowse to create a batch file. One double-click on the batch file, and they will all be loaded again.

o MasterBrowse saves the positions of the first seven windows (if you want it to), so you have complete control over where your documents appear and how your screen looks.

o MasterBrowse allows you to load and save bookmark lists.

o Every window has a set of block markers and a set of ten bookmarks to itself.

o MasterBrowse also has support for the clipboard! A block can be written to the clipboard (with or without formatting) or the clipboard can be read into a MasterBrowse window.

The features listed above -barely- scratch the surface of MasterBrowse!

```
>] Does anybody knows which is the best program
>] for communication with modem for ST 1040 ?

I recommend Connect 2.46e or newer. It works on any resolution, has
ALL the bells & whistles, working emulations, full GEM, on-line
hypertext help, script language and recorder, excellent dialer,
great mouse functions, multi-window and -port ability, very good
own protocols, all speeds, Zyxel voice functions are fully catered
for, etc. etc.

I registered it right away.

Connect's next version will have also FAX-support.

[...]
>for those who say GEnie is better than AOL, I disagree. GEnie may be
>better for Atari stuff (although I found it confusing to find and download
>files), I find AOL more useful as an all around
>entertainment/information/communication service.

Undoubtedly, AOL is a razzle-dazzle service. It features gorgeous color icons in a snazzy windowed interface and even includes sound and even voice prompts at some points. Definitely way cool if you have a Mac or PC (or even an Atari with a GCR, although then it's only B&W).

It's also definitely way slow in strict comparison to an old-fashioned, text-only interface such as GEnie or 'pure' Compuserve. All those pretty graphics and such take a toll on throughput. At 9600 baud it's no problem and it's certainly bearable at 2400 baud, so it's no major big deal. And it is easier for a _beginner_ to navigate through than either GEnie or CIS.

However... for ATARI-related stuff, GEnie is the service of choice, hands down. And if you are using an Atari to access it, you should most definitely be using GEnie's free ST Aladdin software which allows you to do all of your navigating, message collecting, replies, and uploads in an automated mode thus greatly reducing your actual on-line time. I own Microphone Pro for the Mac (an expensive, high end telecomm utility) and it still does not compare in ease-of-use with ST Aladdin for GEnie access.

This is all just IMHO, of course, and everyone is certainly entitled to their own opinion. But if you are going to compare two services it would be best to compare the (free) tools available to do the job. For non-Atari specific stuff, I agree with Mark in choosing AOL (or CIS). But if you want _Atari_ information, there is literally none-to-be-found on AOL. Go GEnie.

Cheers,

The Techno Drug demo is nice, in many ways similar to Omega. My only gripe is that it is a bit too long (or there is not enough screens for the length of the soundtrack, take your pick). Songs of the Unexpected is good as well. I'm hoping to see a bunch of STE demos show up at a.a.u.e soon (I should be receiving them via email). They are not new, but I don't think they are available via ftp anywhere.

Omega is still the first thing I run when I'm showing off my MSTE to someone, usually followed by Octalyser/Protracker ST. The Stardust tunnel demo will definitely add to this list in the future! I can't wait for the complete game.

I've heard it said that there are lots and lots of STE demos, but apparently most don't ever get uploaded to an ftp site :-(. As always, anyone who wants something to appear on atari.archive.umich.edu can email me a uuencoded file directly, as opposed to ftping it to a.a.u.e (which is often quite busy).

> it you will just loose your money and not get a Key...

Of course it shouldn't be PD! If the support is dead the program is dead, but
the key don't get public just like that!!!!

>>>>>>>>>>>>>>>>>>> Nick's Game Ratings Instructions <<<<<<<<<<<<<<<<<<<
================================================================================
Date : 07/01/94 Version : 1.21
================================================================================

Are you tired of spending 60$ for a cartridge, getting it home, and
finding it would be best used propping up the coffee table? Is 4 hours of
fun not exactly what you had in mind when you layed out those big bucks?
Here is a list of ratings, from people like you who voted their mind
about how good or bad their cartridges are. Make your friends vote also,
that way we're going to have more views.

Nick's Game Ratings
-------------------

The Nick's Game Ratings are a compilation of the votes that I receive
for the games on the Sega Genesis, Sega CD, Gamegear, Super Nintendo,
Nintendo, GameBoy, Atari Jaguar, Atari Lynx, Atari ST, CD32 and 3DO systems.
It's what the players think of the games.

HOW TO VOTE
===========

You can contribute in a number of ways to the database:

* vote for games you have played
* change or add information on a game already in the database
* add a game that is not yet in the database

If you'd like to correct a mistake in a game entry or simply add the
value for one of the missing fields, send me a mail in the format
described below.

ACCEPTABLE COMMANDS
-------------------

%GENVOT <vote> -> <Name_of_Game>

This command is to place a vote for the Sega Genesis game
called <Name_of_Game>. _Note_ that <vote> must be between 1 and
5 for your vote to count, where 1 means dire and 5 means
excellent. If <vote> is 9, your vote will not be counted _but_
this will enable you to modify the database afterwards. To vote
for games other than for the Genesis, replace %GENVOT with one
of the following:

+ %SCDVOT, for Sega CD
+ %GMGVOT, for Game Gear
```

+ %NESVOT, for Super Nintendo (SNES)
+ %NINVOT, for Nintendo (NES)
+ %GBYVOT, for Game Boy
+ %C32VOT, for Amiga CD32
+ %JAGVOT, for Atari Jaguar
+ %ALXVOT, for Atari Lynx
+ %3DOVOT, for 3DO
+ %ASTVOT, for Atari ST

%GENADD <vote> -> <Name_of_Game>

This command is to place a vote for a Sega Genesis game not already in the list called <Name_of_Game>. If <vote> is 9, your vote will not be counted BUT this will enable you to add that game and modify the database afterwards. Again, for other platforms substitute %GENADD with one of the following:

+ %SCDADD, for Sega CD
+ %GMGADD, for Game Gear
+ %NESADD, for Super Nintendo (SNES)
+ %NINADD, for Nintendo (NES)
+ %GBYADD, for Game Boy
+ %C32ADD, for Amiga CD32
+ %JAGADD, for Atari Jaguar
+ %ALXADD, for Atari Lynx
+ %3DOADD, for 3DO
+ %ASTADD, for Atari ST

The next functions can ONLY be used after a VOT or an ADD :

%DESC <description_of_Game>

This command will enable you to put a description (see the GAME DESCRIPTION section) for the game previously rated.

%YEAR <Year_of_Release>

This command will enable you to add the year of release to the database for the game previously rated.

%COMP <company>

This command will enable you to add the company to the database for the game previously rated.

%PLAY <Number_of_Players>

This command will enable you to add the number of players playing simultaneously to the database for the game previously rated.

SOME EXAMPLES

To vote for Super Mario Kart for the SNES:

%NESVOT 4 -> Super Mario Kart

To vote for Sonic 2 and Sonic 3 for the Genesis, and add the extra
information about Sonic 3 that it was released in 1994:

%GENVOT 4 -> Sonic 2
%GENVOT 5 -> Sonic 3
%YEAR 1994

To vote for Zool (AGA) on the Amiga CD32, and add the fact that it is
a 1-player game released in 1994, and also the fact that it
should take 20 hours of gameplay to complete, plus add Zool for
the Genesis, vote for that too _and_ say it's a platform game
on the Genesis (!):

%C32VOT 3 -> Zool (AGA)
%PLAY 1
%YEAR 1994
%HOURS 20
%GENADD 4 -> Zool
%DESC Platform

THE VOTES
=========

* - Dreck, yak, bleck, hack, gleck (Horrible beyond words).
** - OK, playable, still dreck, although someone might like.
*** - Decent game that will appeal to some (But not everyone).
**** - Pretty good, a fun game that almost everyone will like.
***** - Damn good, a real winner, every game should be this good.

GAME DESCRIPTIONS
=================

Adventure - Games where you must explore large worlds, killing enemies
and discovering hidden treasures, sometimes with a quest.
Arcade - Games that fit in no specific category except that they
are easy to start playing and are like arcade games.
Copter Sim. - Games where you are controlling the flight and other
capabilities of a helicopter, from a cockpit view.
Driving - Games where driving is the main object of the game, but not
racing other vehicles. Also may include combat & variations.
Easy R.P.G. - Games that are role-playing games but are designed for
the novice player to easily begin play. See Role-Play.
Fight & Jump - Games where you fight and jump to stay alive, and sometimes
have other powers. Boards usually scrolling horizontally.
Fighting - Games where you face off against another player, or the
computer in some form of one-on-one combat.
Flight Sim. - Games where you are given a cockpit view of some sort of
aircraft, and are given a flying mission.
Game/Show - Games that either emulate game-shows or board games.
Competition is with other players or against the computer.
Light-Gun - Games where you must use your system's light gun to perform
some function, usually similar to Shooter-type games.

Interactive - Games where you interact with on-screen video characters
in order to complete the given scenario.
Maze Game - Games where navigating a maze is the main objective. This
can be from any perspective, such as above and inside.
Multiple - Games where there are a variety of game scenarios of
differing sorts, played either randomly or in sequence.
Pinball - Games that emulate the playing of arcade-style pinball
machines, usually with some different options though.
Platform - Games where moving from platform to platform, avoiding
enemies, and getting prizes are the objective.
Racing - Games where the objective is to beat an opponent (either
computer or human) in some sort of vehicule race.
Reality Sim. - Games of this type take place from the point of view of a
fictional character's perspective. Like virtual reality.
Role-Play - Games where you take on the role of some sort of adventurer,
able to increase in abilities and experience along the way.
Shooter - Games where you shoot a lot and avoid being shot by the
enemies you are shooting. Most often are space scenarios.
Sports^ - Games where there is some sort of sporting event to play
other than everyday, normal sporting events.
Strategy - Games that require more thought than dexterity. This can
encompass a great variety of different type games.
Sub Sim. - Games where you are given the command and control of a
submarine and play from a viewpoint within the sub. itself.

Tank Sim. - Games where you are given the command and control of a
tank and play from a viewpoint within the tank itself.
Think-Fast - Games that require the player to make fast decisions and
act on them, kind of a quick-thinking strategy.
Very Young - Games that are too easy for adults and even kids, these
games are really meant for kids 5 and under.

^ Regular sports games will be described by their appropriate sporting event

HOW IS COMPILED THE TOP SECTION
==========

At the begining of the lists, the minimum number of votes
needed in order to qualify for the TOP SECTION was of
four. With the time, I got more votes and some people pointed out
that four voters for a game is not that much so we came up with
a change.

From now on, the minimum number of voters to qualify will be
calculated from the number of voters.

The formula is : Average number of voters per game

STD

2

Note : The minimum number of votes required to qualify is 10.

GETTING THE RATINGS
==========

By E-Mail :

The latest release of my ratings are one e-mail away. All you
have to do is send me an e-mail (paien00@dmi.usherb.ca) with one of
those commands as the SUBJECT :

get_sega - Ratings and Voting Ballot for the Genesis
get_segacd - Ratings and Voting Ballot for the Genesis CD
get_gamegear - Ratings and Voting Ballot for the GameGear
get_supernes - Ratings and Voting Ballot for the Super Nintendo
get_nintendo - Ratings and Voting Ballot for the Nintendo
get_gameboy - Ratings and Voting Ballot for the GameBoy
get_jaguar - Ratings and Voting Ballot for the Jaguar
get_lynx - Ratings and Voting Ballot for the Atari Lynx
get_cd32 - Ratings and Voting Ballot for the CD32
get_3do - Ratings and Voting Ballot for the 3DO

NOTE : DO NOT put any ratings in those messages because I don't read
them, my mail filter is doing all the job. Also be sure of
including the underscore.

Over The World-Wide-Web :

If you have access to the World-Wide-Web (WWW) with any of the following
browsers:

o NCSA Mosaic - for Unix/X systems
o Mosaic for Windows - for PCs with Windows
o MacMosaic - for Apple Macs
o AmigaMosaic - for Commodore Amigas
o Lynx - vt100 Unix (or similar)

The address (or URL) of Cardiff's Video Game database browser is:

http://www.cm.cf.ac.uk:/Games/

Come and have a browse, and enjoy!

Sy: maintainer of Cardiff's Video Game database browser.
e-mail: Simon.N.Smith@cm.cf.ac.uk

On FTP Site :
---
ftp.digex.net
under /pub/access/spatton/
SunSITE.Unc.EDU
under /pub/micro/games/sega/ratings/

Please vote for ALL the games you have played, not just the ones you liked. People want to know which ones are really crappy. Also if you have a suggestion or a comment about the ratings, send it to me - as you can see I've been more than willing to make changes - but I make no promises that everyone's ideas and changes will be made. I apologize to anyone who's votes I lose or mess up. WARNING - you might find mistakes. You will not hurt my feelings if you write me to bring any mistake that I made to my attention. I do not read the newsgroup all the time so it's safer to send me e-mails than to reply to the message.

And for those of you who participated -
Thank You

Nick

1471. IMG Scan for sale

Newsgroup: comp.sys.atari.st
Date: 1994-10-24 20:02:19 UTC
From: hopper_t@msupa.pa.msu.edu
Message-ID: <38h3sb$j7q@msuinfo.cl.msu.edu>
Source record: 178514

I have recently bought a Seymor-Radix IMG Scan, but as far as I can tell, the software isn't compatible with TOS 2.06. I paid $8 + shipping, so if anyone's interested, I'll sell it to you for the same. First offer gets it.

Includes versions 1.70 and 1.84 of the software, scanner (fiber optic cables attache to the print head of a dot matrix printer and plugs into the cartridge port), manuals, and original box.

Tom
hopper_t@msupa.pa.msu.edu

1472. Adspeed ST/e latest software, 68882

Newsgroup: comp.sys.atari.st
Date: 1994-10-24 20:37:00 UTC
From: selick@acs4.bu.edu
Message-ID: <38h5tc$s2f@news.bu.edu>
Source record: 178444

Hello!

I recently purchased a used ADSpeed STe board, and the software is v2.02 I believe, copyright 1991. Is this the latest version? Is there support for a 68882 FPU chip, or only a 68881 still?

Does ICD have an e-mail address on the internet?

Thanks,
Steve

===> I just got a modem about a month ago and bought Stalker 3 for it.
It works pretty well for me giving me a 30 number autodial, timer so I
don't spend too long on GEnie (it's very easy to), and a bunch of other
goodies. XModem, Y, Z, and a few others are supported, and has a bunch
of other stuff I couldn't understand if I tried. It only cost me $35.00
from Toad and I'm pretty happy with it.
Hope this can help!

Didot has postscript drivers but you'd have to check with CGS to
make sure it will run on the Falcon as I run it on a 4meg
accelerated ST.

.
>
>In the report I will need different font styles and sizes, simple .GEM
>drawings etc. (and contents generation would be nice)

It has plenty of fonts which can be sized to suit and there is also
a utility available that will convert Calamus and other fonts to
Didot fonts.

Pictures can be Metafile,Calamus vector graphics, repro12 and of
course Didot Vector Graphics also gem img and degas pictures can
be imported.

The version I have is a year or so old so check with your nearest
supplier for the latest specs.

CGS Computer Bild in the UK +44 [0]81 679 7307 are suppliers.

1476. comp.sys.atari.falcon

Newsgroup: comp.sys.atari.st
Date: 1994-10-24 21:15:26 UTC
From: baumgardner.19@osu.edu
Message-ID: <199410242114.RAA14316@postbox.acs.ohio-state.edu>
Source record: 178448

I don't understand why there is a group of people who are AGAINST having a comp.sys.atari.falcon. I can understand people being ambivelant toward it, but I don't understand why people are against it.

I haven't read news for several days, and there were 300+ new messages in comp.sys.atari.st. I had to wade through several hundred titles of things that, to be quite blunt, don't interest me in the least. This wouldn't be so bad if I didn't have a limited amount of time allocated each day to read and reply to newsgroups. (I don't have the luxury of being able to sit around all day and read EVERYTHING). By the time I'm done sifting through the things I don't give a fig about, I don't have time to post anything.

I think more posts would be generated in a comp.sys.atari.falcon. I think there are more people like me (on a fixed posting schedule) who would have more time to post and be more inclined to post. I think it will work the same way for comp.sys.atari.st.

The benefits for the Falcon owners would be tremendous. We could append sounds to our messages (like NeXT mail), we could upload short files, etc., without having to worry about upsetting people, etc. (I'm not saying that this is what WILL happen in the base, these are just things _I_ think would be cool).

Do the ST owners here really believe that they wouldn't have enough to talk about without the Falcon owners? I can't believe that. So then what's the problem? Don't want to have to read both newsgroups? Then don't read comp.sys.atari.falcon. What's the big deal?

If there's not enough traffic, then it will die a horrible death and all the people who scream there won't be enough traffic can say "I told you so" when we all come crawling back. But I don't think that's the case. I think both newsgroups would do well, and I think that many people will still post in both.

So, yes Requiem, I'd be for a comp.sys.atari.falcon!

Judy

1483. Re: Falcon Games?

Newsgroup: comp.sys.atari.st
Date: 1994-10-24 22:17:22 UTC
From: baldrick@terminator.rs.itd.umich.edu
Message-ID: <38hbpi$e0r@terminator.rs.itd.umich.edu>
Source record: 178505

>Exactly what is available for the F030 at present? Or what is in
>development?

>Rod

Short list of ones I can think of... (look in the
falcon_games.faq it lists falcon specific games as well)

ISHAR
ISHAR II
Transartica
Robinsons Reqium
Walz
OXYD (VGA only though)
Mini F1 (sold out of france)
MultiBriques (sold out of france)
Towers II (soon to be released looks really cool)

There is also a race game set on the moon, but I can't remember
the name. It is sold out of france as well (I think)

I know there are others, but I can't remember there names right now.
There is also a growing list of PD/Shareware games. Anyone know where to
get Zodiax?

Anyone else want to add on to this?

Dan Ackerman
baldrick@terminator.rs.itd.umich.edu

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
uncompressing .Z and/or .uu.

Use the appropriate decomompression program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for
"low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
disk to computer. i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

1485. 1st GRAPH

Newsgroup: comp.sys.atari.st
Date: 1994-10-24 22:46:45 UTC
From: lani@clubcal.com
Message-ID: <lani.0goy@clubcal.com>
Source record: 178456

I need a copy of 1st GRAPH.

Are they still in business?

If not, I would like to get a used copy, original discs and docs.

Anyone want to part with it?

E-Mail me, lani@clubcal.com

Thanks,
Lani

Hey, if you dont try, you will never get anything... I would be game for
a letter campaign. Someone should write up a 'form' letter, post it
here, then we can print it, sign it, and send it to Atari. Since I lack
the tact to write a good letter (unless you wanna send something like
"hey fuckwads, get off the pot" :-), someone else should think one up

1488. program to play samples wanted

Newsgroup: comp.sys.atari.st
Date: 1994-10-24 23:03:57 UTC
From: hallvart@ifi.uio.no
Message-ID: <38hegt$aut@baugi.ifi.uio.no>
Source record: 178509

Can anyone help me out finding programs that let me play samples (.SND)?
I found a nice one called "snd_play.acc" but unfortunately it has some bugs in it
so it messes up the GEM screen, and I think it has bombed out a few times too.

I would also like to get hold of a program that will let me assign samples to
various "beeps", like if you move outside the file selector etc. Not just the
"sysbeep" thingy, but for different areas of GEM.

Someone else mentioned a few programs like that, but they can't be found anywhere.
So, which program(s) are available and where do I find them?

Thanks.

Hallvard, Oslo, Norway

What ever happened to the Voice Recognition stuff for the Falcon030
I use to read about in the ads?

Is it that hard?

This would be great for the Falcon.

Yes, indeed it is a fabulous DEMO. It sure would be great if the
programmer's would let us know what software tools, paint programs,
hardware add-ons and such were used to create these.

: >Why don't you just GEMVIEW to convert the image on your Atari---a superior
: >machine---and save it to disk, then use the disk on your IBM clone?

: Er, like the man said, he needs a _PC_ program since he no longer has an ST.

I only know of one prg for the pc that may work, it does with gem images
anyway. It is called display, I got it from wuarchive, I can't remember
the exact file name. But it was in the pc graphics section. Hope this helps!

1503. Falcon Monitors (?)

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 06:47:44 UTC
From: sxp17@po.CWRU.Edu
Message-ID: <38i9mh$l7g@usenet.INS.CWRU.Edu>
Source record: 178524

Hi. I would love to know exactly what the deal is with Flacon resolutions
and monitor restrictions. Specifically:

1) Can I get all resolutions on a SC1224 with the right cabling?

2) What good will my SM124 do? (none, probably)

3) I guess a MultiSync would be the best bet. Multisync VGA or SVGA?
Or can I get a standard VGA or SVGA.

4) How are the higher resolutions limited by certain monitors?

Thanx a lot, as this will really affect my decision on when I will be
purchasing a Falcon.

> him....

This seems to be some general misunderstanding. You can post to a moderated group just like you post to an unmoderated group. The news transport software (INN, Cnews, ...) will take care that your article is submitted to the moderator.

> Besides, AFAIK a lot of sites filter file above say 64K
> from binary groups, or ignore them altogether....

Usually the moderator of a binary group will handle the splitting of a submission. BTW sites that find it necessary to limit the size of a newsarticle to 64 KB, will probably not carry any of the binaries or sources groups (it doesn't make any sense to store part 0 and 10 of a multi-volume posting, while censoring part 1 through 9).

1509. Developing Mosaic for the ST - support us!

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 09:53:47 UTC
From: groenink@inter.NL.net
Message-ID: <Cy83Ho.54K@inter.NL.net>
Source record: 178529

Dear Atari user,

(help us help you)

We are currently investigating the marketability of a Mosaic product
for the Atari ST/TT/Falcon line. Therefore we would like to hear from
you whether you would be intersted in such a product, whether you know
any other users who would be, etc.

Furthermore, on what configuration would you be wanting to run
Mosaic - would this be MiNT plus MiNTnet, or should we rather provide
built-in support for dialup SLIP with additional services such as ftp?

As of now, it seems that no other companies are currently working
on a similar product. If this is not true, please also notify us.

Any information is highly appreciated.

thank you,

Annius Groenink for ZFC (zfc@zfc.nl)

My Atari SM124 Hi-res monitor has white horizontal lines across it when I switch it on. The screen also flashes brightly at first, a bit like there is a lightening storm going on inside it. It does seem to stop after about 10 mins though. Anyone else had a similar problem?
Cheers,
Dave.

Nada is my girlfriends name.....(Nada Radisaljevic) :)

I don't think writing letters to atari will help - I did, and got a mail
full of bad attitude from Atari UK for my pain, denying that TOS5 even existed
(funny that - having actually used it).

I posted Atari's reply last week, but I still have it if anyone is interested.

Craig.

Well, I played the demo, and was quite impressed (shame the authors didn't put in an animated rolling ball like the one in Starball though).

It looks well chunky on my SVGA monitor (more so than Starball), so I'll reserve judgement for the Falcon version - but the playability is definitly there.

Were are spoilt these days :)

PS - Anyone seen the screen shots of Zero-5 in ST-Review this month ? Tres Cool.

Craig.

I have it done, and it works fine. Just run unpack.ins through ini-tex,
then edit the config file, if you like (I have the us english and
german patterns included, tex-large is necessary for that), and run
initex a second time, just as the installation guide suggests. The
whole thing took me about 1 hour to do on a TT.

Regards,
Ulrich

p.s.: you should use the newest version of cs-tex, which has a configurable
tex-large and initex-large.

IMHO your best bet is a multisync SVGA. You want a monitor that can
do as many sync rates as possible. I have one that does between
30Hz and 72Hz. Ive heard tell that the absolute best monitor
for any machine is the NEC 3d, as it can go down to something like
15Hz.

Using a ScreenBlaster, I can get up to 1024*768 still readable, and
if I go higher, its really ulgy

>For News-processing, i personally use the WNEWS-Package, although i've
>heard that some people already ported CNEWS and INND. (Hello Juergen ;-))

Well, already you have told me more things about various ports etc than
I have seen in the last 18 months in this newsgroup. What are the ports
of SMAIL, WNEWS and INND?? There really needs to be a definitive listing
of where this software is available from.

I for instance aren't so interested in UUCP/Mail/News solutions for MiNT
as I don't run it, but there must be other software around for just
normal TOS environments like the port of NN from a few years ago. For
instance the readme for the port of NN mentions two other systems, that I
have never heard of before; HH rmail and MNEWS. Where is this stuff
available from??

We really do need that FAQ that has been talked about! :-)))

Cheers,
John

Hiya Annius,

I'm very interested in a Mosaic-type browser for the Web. I know a
number of people with a similar interest. I'm almost on the verge of
buying a cheap PC just to run Mosaic - and I don't wanna do it.

>Furthermore, on what configuration would you be wanting to run
>Mosaic - would this be MiNT plus MiNTnet, or should we rather provide
>built-in support for dialup SLIP with additional services such as ftp?

I'd much prefer the built-in option - at a pinch go for multi-tasking,
but make it run under MagiC (which would still require you to write a
TCP/IP socket type thing). In fact, that might be the way to go - if
you wrote a well documented socket then anyone could write their own
multi-tasking modules on top of it (IE telnet, ftp, gopher, etc.).

regards, Graeme

1527. REQ: Screensaver that ignores MIDI activity

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 12:03:10 UTC
From: rjt2@bnr.co.uk
Message-ID: <38is5uINN55p@bhars12c.bnr.co.uk>
Source record: 178543

Does anyone know of a screensaver (preferably PD) that will ignore activity on the MIDI interface? I've tried a few screensavers off the atari-archive, but found none yet that can do this. I'm using a late 1987 520ST-FM, so assume an early version of TOS (in case this makes any difference).

Thanks in advance,

Richard.

1529. What scanners work on ST? hand/flat

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 12:27:47 UTC
From: selick@acs4.bu.edu
Message-ID: <38itk3$mil@news.bu.edu>
Source record: 178548

Exactly what are the necessary ingrediants for a functional scanner on the Atari? What makes/models will work? Is it like the hard drive port, where there is a universal Atari interface that goes in the cartridge port and then you can use any scanner? Or does it have to be made for the Atari?

Further, what software is needed to scan in images?

Thanks,
Steve

P.S. I would entertain purchasing an Atari-specific hand scanner if someone has one for sale. Please respond via e-mail.

Well, I'm quite impressed. But I'm getting the feeling that I'd need 16M RAM and 32M Swapspace for this. How about memory requirements?

ObJoke: In a Pentium review I read, the author was boosting about having a *whopping* (sic!) 646K free RAM --- out of 16M. Nice machine, huh?

I'm certainly interrested in such a product.

>Furthermore, on what configuration would you be wanting to run

My main purpose will probably be designing pages offline and upload them
to the server here at the university... so Mosaic will function as a sort
of previewer in that case.

Actually, it does not use _too_ much memory. ~250K, currently. It will
work on a 520ST with a floppy drive (if you were patient). In reality,
though, I cannot see anyone using it that way. It is very comfortable
on a 1M system with a hard drive, though. If you have a larger system,
you will enjoy it more.

If you ever opened the case of a TT and tried to fix one you'll know why the
TT was available in such small quantities. The machine just wasn't designed
to built on a production line! I mean, who would design a machine where
parts had to be part assembled before the final soldering of the VME bus was
done by hand, then some of the metal shielding had to be bent into place. I
mean, there's no idea of production modularity. Whatever else you may say
about the PC design, at least it's easily put together on a production line.

>
> Steve

It`s because, CALAMUS S and SL has a software made virtual RAM manager. Machines with a 68020 or better has a PMMU built-in, which means that the virtual RAM managing procedure is handled by the PMMU instead of a software rutine. The PMMU does it much faster than the CALAMUS S handler does.

(PMMU = Paged Memory Managing Unit).

Hope this helps.

Outside is not software virtual memory, it utilises the PMMU in 020/030/040 etc. machines.
Outside can`t run on a 68000 based machine.

Built-in routines would be best, along with NVDI 3 and Magix!-support.
I don't know yet about technical aspects of Mosaic, but it would always
be best that all these ways of doing things were fully user-configurable
right down to graphic look and fonts.

Message-ID: <38j6dr$68m@oak44.doc.ic.ac.uk>
Source record: 178459

Another major difference between ST and TT ram is
that TT ram is not shared by the 680x0:
all other components are not connected to it
(i.e. DMA sound, video ...)
So the 680x0 don't have to wait when it wants to
read something in memory, whereas for ST-ram you
usually have to wait that the video controller
finishes his job before beeing able to do anything.
(On the STF/STE, this was well handled as Shifter
and 68000 were synchonized).

Antoine Martin.

Well, I hate to disagree with anyone, but IMHO I would much prefer that the
product simply be written well (so it will work with video boards, Multi-Tos
and Geneva) and function properly. Leave the fancy stuff for later and just get
out a good solid working product! I don't have experience with NVDI and Magix!,
but I assume all properly written software will work with them and hopefully
they do not require specific support (except for additional features).

Best of luck!

Oh, sorry. Forgot to say that it will be a commercial product.
Probably for the standard ZFC price of NLG 100 (US$60 approx.).

This of course depends on the stand NCSA take on this adventure.

Maybe they would be feeling generous this week. After all, they are how
many million richer this past while. What with Time Warner and now SEGA,
maybe, just maybe, they could spare a few million in new products and
support.

I say * write those letters *

Many people, I believe, have an interest in all things Atari, not just Falcon or ST/STe. I read all the Atari newsgroups (with the exception of .advocacy, a -real- waste of time & bandwidth, IMHO). It's simply easier for -me- to read 3 newsgroups every day rather than 4, 5, or more.

>I think more posts would be generated in a comp.sys.atari.falcon. I think
>there are more people like me (on a fixed posting schedule) who would have
>more time to post and be more inclined to post. I think it will work the
>same way for comp.sys.atari.st.

Possibly, but I doubt it. I believe many people will have the tendency to cross-post across the newsgroups, especially when they have questions or comments of a more generic nature. In a 'perfect' world, all posts would be kept in their specific topic-related areas. But alas...

>The benefits for the Falcon owners would be tremendous. We could append
>sounds to our messages (like NeXT mail), we could upload short files,
>etc., without having to worry about upsetting people, etc.

Please don't. Uploading files _would_ upset some people. We just discussed this a few days ago. That's why we have the .binaries and .sources areas. And I'm not sure how UNIX and other non-Atari newsreaders would handle appended sound files to posted messages. Cool idea, though.

>Do the ST owners here really believe that they wouldn't have enough to
>talk about without the Falcon owners? I can't believe that.

Neither can I. Where did that idea come from? Not from ST users, surely.

>So then what's the problem? Don't want to have to read both newsgroups?
>Then don't read comp.sys.atari.falcon. What's the big deal?

Again, many folk like to read all the Atari newsgroups. But I agree, it's no big deal to most of us if one takes an objective, honest look at it.

>If there's not enough traffic, then it will die a horrible death and all the
>people who scream there won't be enough traffic can say "I told you so"
>when we all come crawling back. But I don't think that's the case.

Many newsgroups exist on the net with VERY little traffic (< 1 per day) so that's not really a problem or a bearing on a group's continued existence.

>I think both newsgroups would do well, and I think that many people will
>still post in both.
^^^^^^^^^^^^

That's what I'm afraid of. ;-)

Seriously, there are valid arguments on both sides but I don't consider
any of them, pro or con, to be very earth-shattering.

The RFD period is coming to a close and people will have a chance to vote
on the .programmer newsgroup idea. AFAIK, an official proposal and RFD for
a .falcon group has not yet been presented, has it? Or was I asleep again. :)

You really need 1024*890 pixel graphics as a minimum to make this
worthwhile, at least thats what we found when we toyed with using
Macs as Xterms. Otherwise you can't get much more than an Xterm on the
screen :-)

Your enthusiasm (although not necessarily your choice of words) is quite
admirable, Billy. But don't expect too many long-time Atarians to jump on
a letter writing campaign bandwagon with you. It's been tried before in
times when Atari was much better poised to listen to the user base. That
is hardly the case now, IMHO. The old adage could be changed to:

Try, try again... until you get so fed up you give up in disgust.

No, Roger, that still wouldn't be right. While I agree it can be extremely
frustrating in regards to software which is poorly supported (if at all),
it's still illegal to post copyrighted software without the author's express
permission to do so.

'Two wrongs don't make a right' and all that rubbish, ya know. ;-)

1553. For Sale: Misc. Atari ST Stuff

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 17:35:56 UTC
From: dtarico@OCF.Berkeley.EDU
Message-ID: <38jfls$c9b@agate.berkeley.edu>
Source record: 178472
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.other

Here is what is left of my Atari ST stuff. Please e-mail or call if you
are interested in anything or have questions. Note that my asking prices
don't include shipping if necessary (from the San Francisco area). Offers
will be considered, especially for multiple items.

<< HARDWARE >>

Spectre GCR: Macintosh emulator for all ST/STE's and TT. Includes genuine
Apple 128k ROMs, Spectre 3.0 software, Mac System 6.0.5, a Macintosh
reference manual, and Epstart printer driver which allows printing on
Epson-compatible dot matrix printers. This is everything you need.
$130

TOS 1.2: 2-chip set. This is the standard Mega ST TOS version. Will work
in any ST model. Offers a few new features over TOS 1.0 such as keyboard
reset and blitter support, but does not have all the features of TOS 1.4.
$5

<< SOFTWARE >>
(Note: A * by the name indicates that I don't have the documentation.)
The list format is:
Title, Version (if any), Vendor, Price: Description

Financial Cookbook, Electronic Arts, $3: Financial planning assistant.
HabaCom, 1.06, Haba, $2: Telecommunications, terminal emulator.
*MichTron BBS, 1.8, MichTron, $3: Electronic bulitten board host software.
*Flash, 1.6, Antic, $4: Telecommunications, terminal emulator.
*Kermit & Remote Control accessory for Flash, Antic, $2: Adds the Kermit
file transfer protocol and remote access capabilities to Flash.

All above software: $12

I have a bunch of double-sided disks that happen to be full of ST software.
These contain PD/shareware, demos, old backups, etc. I'll sell these as
blank disks (i.e. that's how much you pay, and I'm not responsible for the
contents). Take a chance, get some good stuff!
You can buy any quantity @ $0.50 each.:
30 disks of games: $15
42 disks of utilities/applications/demos etc.: $21

<< MISCELANEOUS >>
(Free if you buy over $20 of other stuff)

Magazines, catalogs, and other Atari-related info including about 20
issues of STart, ST Log, and ST Informer, and about 15 issues of Atari User:
$5. Free to local person who wants to come and get it.

Tilt/Swivel monitor stand: $4

>Or at: missionware@delphi.com

Ooooh, that's right, Gordie. I knew John had an account on Delphi (and BIX) but had forgotten that.

And in regards to my recent post about the merits of GEnie vs. AOL, I was -much- remiss in not mentioning another great service, Delphi. Delphi also provides considerable support to Atarians (thanks to dedicated folks like Gordie Meyer) and sports a nice Internet gateway, too. My apologies to all Delphi users. It's well worth investigating, IMHO.

And while I'm in this humbling mood, let me also concede that AOL -is- a very nice service given you can access it at say, 9600 baud or better. I managed to log in last night for the first time on a high speed line and it was an infinitely more pleasant experience than at 2400. It's still akin to Death Valley as far as Atari information goes, however.

1555. Re: Falcon Monitors (?)

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 17:51:18 UTC
From: gaghon@nevada.edu
Message-ID: <38jgim$h3c@news.nevada.edu>
Source record: 178480

What I have is a NEC Multisync II. It works great with the Falcon. The top rez. is less then the NEC 3D, but I am using around 754x560 or something like that.

Note: Multisyncs II have a 9-pin instead of a 15-pin connector. Called NEC and they told me it was the same thing, the monitor was originally made to sell to EGA PC owners who wanted VGA/SVGA a monitor.

I just changed the connector on my Multisync Gizmo to a 9-pin. You could order a part from NEC a 9 yo 15 pin adapter.

Best of all, its cheaper. I had a choice of a $250 dollar NEC 3D or a $170 NEC II.

1559. What scanners work on ST? hand/flat

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 18:18:39 UTC
From: blade01@pplnet.com
Message-ID: <15855AAYBSOFMHUCTGK@pplnet.com>
Source record: 178468

IS>Exactly what are the necessary ingrediants for a functional scanner on the
IS>Atari? What makes/models will work? Is it like the hard drive port, where
IS>there is a universal Atari interface that goes in the cartridge port and the
IS>you can use any scanner? Or does it have to be made for the Atari?

I got the Migraph hand scanner, which uses a cartridge to plug in a
standard hand sacnner. I also picked up a spare scanning head (for an
IMB clone) from Dexxa - which works perfectly.

IS>Further, what software is needed to scan in images?

Touch-Up from MiGraph does a great job.
There are, I believe, other programs, but that's what I have.

IS>P.S. I would entertain purchasing an Atari-specific hand scanner if someone
IS>has one for sale. Please respond via e-mail.

Try Toad Computers in Maryland.

] what is a synergya.msa file after unzipping it.
] So how to run .msa on a atari??

Magic Shadow Archiver. Get the file "MSA2_3+.PRG" from
./atari/Archiver/

at

atari.archive.umich.edu

FTP site.

A .MSA file is a compressed/stored image of an entire disk.

1563. Re: program to play samples wanted

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 18:53:42 UTC
From: wells_s@kosmos.wcc.govt.nz
Message-ID: <38jk7m$p05@golem.wcc.govt.nz>
Source record: 178488

] Can anyone help me out finding programs that let me play samples (.SND)?

The best one for the ST is "Soundlab". Available on the
atari.archive.umich.edu FTP site in ./atari/Sound/ the latest version
is 1.11. It plays _any_ kind of sample. (It'll even load in binary
files & try and play them if you want. Good for ripping samples out of
programs etc.)

] I would also like to get hold of a program that will let me assign samples
] various "beeps", like if you move outside the file selector etc. Not just t
] "sysbeep" thingy, but for different areas of GEM.

There's 2 good programs for this. One is "GBell" and the other
is (Brain-strain...), in the GEM-Sound package (I _think_ - it's a
very large file with programs to patch samples into everything imaginable)

Both are in the same place as soundlab or thereabouts.

1566. Re: Falcon Monitors (?)

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 19:03:58 UTC
From: wells_s@kosmos.wcc.govt.nz
Message-ID: <38jkqu$p05@golem.wcc.govt.nz>
Source record: 178494

] 1) Can I get all resolutions on a SC1224 with the right cabling?

No. There's RGB and VGA resolutions. The SC1224 can only manage the RGB ones. Although apparently there _is_ software & hardware mods you can do to make it work.... (Mind-you, trying the screens with a 70Hz refresh will probably wreck a SC1224 :)

] 2) What good will my SM124 do? (none, probably)

Basically. It _will_ work, you'll just only be able to juse the standard-ish monochrome resolutions.

] 3) I guess a MultiSync would be the best bet. Multisync VGA or SVGA?
] Or can I get a standard VGA or SVGA.

If you can afford it, a good Multisync SVGA will do pretty much everything.

However, a standard VGA will probably be enough for most needs, from what I've seen you don't need much else! (Although, it's good to have a standard composite RGB monitor handy for the programs that don't like VGA modes.) Again, there's apparently things that can be done to tell the Falcon that the VGA monitor is a RGB one so that it will try & display the RGB modes on it. A good Multisync VGA/SVGA can handle anything the Falcon can display - so this idea should work presumably.

] 4) How are the higher resolutions limited by certain monitors?

Some monitors can't cope with the speed at which they have to update the screen. Some can go from around 15Hz to about 90Hz, whereas the good old SC1224 will do 50Hz or 60Hz, and AFAIK little else. Some resolutions do require higher refresh rates than 60Hz, otherwise they flicker quite badly!

1567. Re: [FAL] Zool Game

Newsgroup: comp.sys.atari.st

On a similar subject, a friend gave me ST-Format disk #51 the other day, which had a demo of Zool on it. What amazes me is that you have around 60 seconds to play the demo before it returns to the title screen, do they really expect people to get a decent opinion of games in this time!? (The real game (Which I own), has nowhere near this time limit of the level that is being demoed...)

What's the difference between Zool on the ST and on the STE, apparently there is some, unfortunately it's not the sound! :)

] like that), but was unable to locate it. Could some kind person please let
] know where to go hunting? Also, what is the latest Geneva update? Thanks!

It hasn't been put up anywhere get. I've got the LZH sitting here, I'll
try & upload it and stick it up on atari-archive. (No, I'm not going
to EMail it to anyone, this site is under enough stress as it is! :)

The latest Neodesk is Rel' 002. (v4.02). The latest Geneva is Rel' 003
(v1.02). Neodesk is almost unusable without the 002 patch, as the
amount and quality of bugs that are fixed are in some cases, quite
major!

I am looking to buy a copy of COMMBAT video game by Scott Adam's
Adventure International and the associated computer to run it. This was
a tank battle game that worked between two TRS-80s, Atari 800 or Apple II's
and a modem or direct serial line.

Please respond if you can sell me one or two of these computers in a
turn-key fasion where I can run it as soon as I get it. I would probably need
the modem as well.

Hutch,
I agree that Atari probably, most likely _will not_ go through the trouble of running off a batch of TOS 4.92 ROMs. Heck, they have Lynx games completed but do not wish to take the time to produce them. However, the decision of Atari to lisence TOS to others and to turn other computer projects over to 3rd parties (SpeedoGDOS and Falcon games) is a good sign. Perhaps, there is just a slight possibility of Atari allowing Compo, for example, to continue developing TOS? What are your opinions on this?

1576. X-oR/Atari ST/ProCussion help

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 21:48:09 UTC
From: darling@cellar.org
Message-ID: <yeuRuc1w164w@cellar.org>
Source record: 178363
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth

Here's a favor I'd like to ask of Atari X-oR users. Although I've switched to Logic for Windows as my sequencer, I've decided to dust off my old ST and use X-oR as my editor/librarian. There still is no substitute (X-oR for Windows doesn't like my MIDI interface).

Well, somehow, my X-oR profile for the E-Mu Pro/Cussion has gotten messed up. I open the edit window and there's nothing there. So if someone has the X-oR profile for the Pro/Cussion and would be willing to uucode it and send it to me, or perhaps direct me to where I could get it on the net, I'd really appreciate it. I don't even know who to call anymore; Dr. T's sold the rights to Mark of the Unicorn, and my experience with MOTU is that they don't care about my problems much.

Any help will be appreciated.

Source record: 178365

On Thursday October 20th at about twenty to nine
mike@medsun.unige.ch (*Mike Morris*) happened to write:

Hi folks!

MM>ST Magazin (or is it called ST Computer? I forget) has just reviewed
MM>Medusa, with a fairly thorough list of compatible and incompatible

The test was in the October issue of the German magazine *ST-Computer*.

MM>Notably, they did not mention Neodesk 4, Geneva, and Magic!; does
MM>anyone know about these?

NeoDesk 4 and Geneva are not yet officially available in Germany. Mag!C *2.0*
does not work on the Medusa.

The Behne brothers have a Medusa in their office and I strongly believe that
Mag!C 3 will run on these machines.

There is a *Falcon-compatible* version of Mag!C due out RSN, but I doubt this
release will run on the Medusa as well.

1582. comp.sys.atari.falcon - Too Much Trouble??!??

Newsgroup: comp.sys.atari.st
Date: 1994-10-25 22:26:24 UTC
From: peseb@freeport.uwasa.fi
Message-ID: <38k0mg$k1e@zippo.uwasa.fi>
Source record: 178492

Dear Fellow Atarians And Falconers,
I have now been following the debate about the possibility
/reasons/speculations etc. about the proposed new newsgroup
for the falcon users.
In this time I have found many a good argument for and
even a few good ones against the idea, but however the
general impression I got is that most people think this would
be a good idea. However, as earlier stated in this thread
there are a few people who seem to find the whole concept
aggrivating, this is all but within my understanding.
As the situation is, there is obviously enough interest
to atleast start an RFD, but obviously this seems to be just
"too much trouble", this upsets me, as I have seen atleast
50 or so Newsgroups that contain only 3-10 post at any one time,
I am absolutely certain that a comp.sys.atari.falcon group would
go way above that as even here there are usually atleast 20-30
Falcon post at any one time. And that's a bare minimum.
It is truly a toil for us Falconers to sift through 300-400
St-concerned posts to find what we seek, and my deepest symphaties
to those who have timelimits to live with!
The nay sayers have said that this proposal would serve to
create more cross posts and also "to divide the Atari family"
Some say that this proposed news group would
"Dig the ST's coming grave a few feet deeper",
Well, If someone thinks that Atari's Future in computers lies
with the ST and not the Falcon/TT/Medusa(3rd Party :( )
they must be seriously blind to facts...
I Had an ST and I loved it, but facts are facts, it can't
live forever. But this is irrelevant to this thread.
However, The question at hand is:
Is the RFD honestly too much trouble?
Shall we keep wasting bandwidth/Disk space/Time/Patience with
this thread , or Shall we put WORDS TO ACTION!?
I do not know how to start the RFD, but to those who do,
please start it and let's get this over with, If the vote
fails , The issue is over. But please , give us a chance!
Us Falconers are segregated enough as is. And so are Atarians
for that matter, so let's not segregate eachother to top
the story off. We might aswell buy PC's then. (I will never...)

This Is Really For The Best Of Us All.

Respectfully Pleading,
Peter Sebastian Baeck.

> Falcon or ST/STe. I read all the Atari newsgroups (with the exception of
> .advocacy, a -real- waste of time & bandwidth, IMHO). It's simply easier
> for -me- to read 3 newsgroups every day rather than 4, 5, or more.

And there are those of us who would like to be able to READ a newsgroup and have time to pay attention to details, reply to messages, etc. I don't enjoy skimming the bases... I feel I'm not giving each post the attention it deserves. But, with my time constraints, that's what I end up doing. (And, reading the replies to some of the messages out there, I'm not the only skimmer! <g>)

> Please don't. Uploading files _would_ upset some people. We just discussed
> this a few days ago. That's why we have the .binaries and .sources areas.
> And I'm not sure how UNIX and other non-Atari newsreaders would handle
> appended sound files to posted messages. Cool idea, though.

You're so cute with your netcop hat on, Hutch <grin>. Actually, you're jumping ahead of me. Any problems with my hypothetical situations could be
discussed in the hypothetical falcon area.

As for the "Cool idea", I wish it were original! I've used the feature on NeXTs. It is really cool.

> >Do the ST owners here really believe that they wouldn't have enough to
> >talk about without the Falcon owners? I can't believe that.
>
> Neither can I. Where did that idea come from? Not from ST users, surely.

A few people complained that there wasn't enough traffic to merit a seperate area. I REALLY don't think crossposting would be a problem, either.

> >So then what's the problem? Don't want to have to read both newsgroups?
> >Then don't read comp.sys.atari.falcon. What's the big deal?
>

> Again, many folk like to read all the Atari newsgroups. But I agree, it's
> no big deal to most of us if one takes an objective, honest look at it.

So then what's the problem? Those of us who wanted to read the area
could, those who didn't want to read the messages wouldn't have to and
those who like to read everything would have to decide on their own what
they wanted to do.

> Many newsgroups exist on the net with VERY little traffic (< 1 per day) so
> that's not really a problem or a bearing on a group's continued existence.

So why vote against it? Why not say "well, I think they're stupid, but if
that's what they want to do, just let those wacky Falcon owners go away
and
leave us to our own business".

> Seriously, there are valid arguments on both sides but I don't consider
> any of them, pro or con, to be very earth-shattering.

It's noteworthy that you have so much to say on a topic you're so
ambivalent toward! <grin> Heaven forbid we find a topic you're all
gung-ho for!

> The RFD period is coming to a close and people will have a chance to vote
> on the .programmer newsgroup idea. AFAIK, an official proposal and RFD for
> a .falcon group has not yet been presented, has it? Or was I asleep again. :)

No, an official proposal hasn't been presented yet. Mostly because there
are a vocal few complaining about it. Again, it's interesting that some
who are so careful to appear neutral seem to have very definate opinions
on the matter! I still don't understand what the big deal is.

Anyone had problems with Civilization TOS 2.05? I have a friend who has a 1040STE with TOS 2.05 in it, and he has bizarre things happen with Civilization. (Won't let you enter cities that are yours sometimes, locks up
sometimes in no apparent pattern, etc.)

He tried turning off all the options, he tried turning on all the options, etc. He's playing it off his hard drive (which is running everything else just fine). I've told him to try playing it on floppy, but I don't know what success he had with it (although I hate playing it off floppy on my Falcon).
I thought it might be writing corrupt save files, so he gave me his save disk, and I played it at my house, and it all works just fine. It's possible that his copy is corrupt, but I thought I'd check here before recommending that he send it back and get another one.

Please EMAIL me with any brilliant ideas for him to try. Thanks in advance!

In a previous article, rmccall@mcs.dundee.ac.uk (Rod McCall) says:

>Is it possible to connect this to an F030?
>
Yes- but you need a HEATSEEKER interface, which replaces the SLMC804. This costs around $120 (from Toad, anyway).

From my understanding, this is also an improvement, as the unit does not require the Laser Printer to be on at startup, and you can turn it off or on as you wish without screwing things up. I assume it has its own power supply.

Even with MiNT 1.08 it feels quite usable what comes to speed...

> The extra features (iconify, speedofonts in dialogs, etc) are good.

I quite agree =-) !

> TOS4.92 seems to be more compatible with older software than TOS4.02 is
> (I tried Lattice C 5.52, which has problems with it's hierachical menus under
> TOS4.02, and it works a treat under TOS4.92).

You're right; it is more compatible than even GENEVA 1.02, and works very well
with all sorts of programs that caused trouble under "old" MultiTOS.

> It seems criminal to me that this never got released - it could have saved
> multiTOS/MiNT from the scrap heap if this OS version had made it into

> MiNTv1.11h2-beta (took me ages.....)).
> Now - what we really want is for Atari to release TOS 4.92 along with the
> next PD MiNT binary release (I believe this is due RSN).

Absolutely true, if anything ! If Atari doesn't want to continue developing
AES, it really should give AES 4.1 beta to Public Domain. This beta version is
so damn good that it really _is_ a crime to keep it unreleased !!

Btw; all Atari multitasking systems seem to have one problem in common: when a
fileselector pops up, all other processes freeze up =-(. While doing some data
transfer this simply isn't acceptable, because: pause -> timeout -> problems...
The same thing occurs when you use menus, or the disk drive reads or writes.
Can anyone tell me, why these things can't be improved - when e.g. Mac OS
handles them better?

Btw2; though SoftPC Beta version shouldn't be around anywhere (any more than
AES 4.1..), it is, as many know. I saw it, liked it a lot - but one question:
it seemed not to understand 1.44 Mb disks at all. The Dos used was 5.0, if I
remember correctly, and the machine was Falcon. Why doesn't SoftPC support HD
drives - is it a BIOS-level problem? I really hope the program will be
officially released, because it seemed very usable - even if not complete (a
beta version, after all..). Well - I'm glad I saw it, legal or not - because

now I know that it's worth buying if Insignia gives it out !

> Craig.

From: hallvart@ifi.uio.no
Message-ID: <38k31b$ns6@holmenkollen.ifi.uio.no>
Source record: 178361

I will lose my UNIX account here at the university in a couple of months time, but I don't want to go without Internet, so I will probably access it commercially, by using a modem with my STE.

Now, I need to find out what kind of software is out there, stuff that i should download from FTP before I lose my account.

I've been using STorm now, just to check into my mail from home when I don't bother going to the uni. just for that, but it's rather cumbersome compared to UNIX X11 "X-windows" that we have here.

So, which programs are recommended for ease of use, features etc. Preferrably PD or shareware, but I could also opt for commercial programs if they're not too expensive.

I also need to get hold of an offline reader. And can someone please tell me how they work? I dowloaded a program like that some time ago but never got it to do anything.

Thanks.

Hallvard, Oslo, Norway

Aaron Hopkins has not released his rights over the program, AFAIK he has
turned dist. over to a company in California.
Distributing any key without his authorization would constitute piracy.

> I don't understand why there is a group of people who are AGAINST
> having a comp.sys.atari.falcon. I can understand people being

I think its mainly the opinion that the Falcon is just another Atari - and haveing a seperate newsgroup is not necessary. Whats more (although I'm no expert on this), it seems that not everybody's 'Net service provider would necessarily carry this new newsgroup.

> This wouldn't be so bad if I didn't have a limited amount of time
> allocated each day to read and reply to newsgroups. (I don't have
> the luxury of being able to sit around all day and read EVERYTHING).

Who does? ;-)

> The benefits for the Falcon owners would be tremendous. We could
> append sounds to our messages (like NeXT mail), we could upload short

This assumes that people will be using Falcons to read the group?

> Do the ST owners here really believe that they wouldn't have enough
> to talk about without the Falcon owners? I can't believe that. So

I don't think its that at all.

Don't forget the TT owners. we are going to read the Falcon group as much non DSP Falcon software is applicable to the TT. OTOH us TT owners (though I do not presume to speak for all us) don't seem to think its necessay to have a seperate newsgroup. After all its an Atari isn't? Whats more its an ST in many respects. So is the Falcon.

:-)

Roland.

I would also like to point out that not only is ANSITerm very good for 16 color ANSI, but its speed is unbeatable. Version 1.90 will greatly outperform others in shear speed, while 1.91 is significantly faster still.

On a Falcon, ANSITerm 1.91 can handle full-tilt 57600 with scrolling. ANSITerm 1.91 added hardware scrolling on a stock ST.

]
] ...And how do you make that possible? I have an STe with an NEC Multisync I
] monitor, and TOS 2.06.
```

MonSTer will give 1280*960 in monochrome. (I think that's what it was, it could be in medium res', but I doubt it).

Monster is a virtual-screen program which roughly doubles overall screen area in any ST-resolution. It's available on atari.archive.umich.edu and pretty much every other atari-supporting FTP site. It would be in the Graphics or Ste directories. (Although it works just as well, or not identically on a non-STE). Doesn't work on Falcons/TT's AFAIK. (Doesn't work on non-8Mhz or non ST-Res' modes basically I think)

] Anyone had problems with Civilization TOS 2.05? I have a friend who has a
] 1040STE with TOS 2.05 in it, and he has bizarre things happen with
] Civilization. (Won't let you enter cities that are yours sometimes, locks
] up
] sometimes in no apparent pattern, etc.)

I don't think Microprose have _ever_ written anything that is noticably bug-free. Civilisation is bug-ridden, although there is a couple of cracked version around in which bugs have been greatly reduced, and _apparently_ there is a more recent version released by the company that fixes some of the larger bugs.

TOS 2.xx+ isn't usually too friendly towards many games. TOS 2.xx machines are mainly aimed at increased productivity I think, rather than gaming! :) (Although they could have tried to make things more compatible, but, that's Atari for you! ;)

] So, which programs are recommended for ease of use, features etc.
] Preferrably PD or shareware, but I could also opt for commercial
] programs if they're not too expensive.

There's just about constantly a thread of this nature going in this group, essentially, look in the ./atari/Telecomm/ directory on atari.archive.umich.edu and get every Comm's file greater than say about 100K and check it out.

If all you want is to access the net and read Mail, then either Storm or Uniterm is by far the best PD/Shareware option. If you want downloading & extra features, check out the others...

(Storm has more features, but is not quite as fast or stable as Uniterm. It has Zmodem but not Kermit, and Uniterm is the other way around).

Message-ID: <38klh5$296@golem.wcc.govt.nz>
Source record: 178382

```
] Well, I played the demo, and was quite impressed (shame the authors didn't
] put in an animated rolling ball like the one in Starball though).
]
] It looks well chunky on my SVGA monitor (more so than Starball), so I'll
] reserve judgement for the Falcon version - but the playability is definitly
] there.
```

I think they're dreaming a bit regarding the price they want people to pay. ₤28.50(UK-Pounds) for out of the UK. (Roughly $50US). After all, it's only a pinball game, albeit it more colors and better graphics than most, and other than being in stereo, the sound isn't too much better than what the soundchip can manage (with samples, not with generating-code obviously).

```
It's good to play, but when you compare it with Starball, which may
not be quite as pretty, certainly it roughly as playable, and the authors
only want a donation (I hope folks have sent them some money if you
play it!? :) If they dropped the price to about half, that'd be
more realistic.... Simple economics, find the equilibrium price people
are likely to go for, and sell it for around that somewhere, after
all, it's only a 2-step distribution, rather than the usual 5 or so,
goes from the coders, to Merlin distributers, to the user, rather than
the software house adding their charges.

A good game, but not $50 good! (If nothing else, it's good for showing
off the smooth scrolling of the STE :)
```

help is what we need!

> We are currently investigating the marketability of a Mosaic product
> for the Atari ST/TT/Falcon line. Therefore we would like to hear from
> you whether you would be intersted in such a product, whether you know
> any other users who would be, etc.

interested? INTERESTED? you'ld better believe we're interested!

> Furthermore, on what configuration would you be wanting to run
> Mosaic - would this be MiNT plus MiNTnet, or should we rather provide
> built-in support for dialup SLIP with additional services such as ftp?

make it for the unwashed masses.... you know the 500,000 plus of us who couldn't compile and configure MiNT/MiNTnet if our lives depended on it. Make it plug_and_play with all the built-in support for SLIP with ftp, telnet, ping, irc, etc. etc. etc. Make it to work on the machines owned by the vast silent majority of us.... yes, those of us with the lowly ST and STe's without $1000 graphics cards, who do all our work in ST Med and only occasionally ST High (I don't want to hear a single word from you monochrome bigots :-). More importantly, make it reasonably priced, make it bug-free under every conceivable configuration, make it easily available and make it yesterday!

Most importantly... just MAKE IT! "build it and we WILL come"

Eric

1613. Mountain Software Holiday Software Sale

Newsgroup: comp.sys.atari.st
Date: 1994-10-26 06:03:56 UTC
From: Mountain Software <mtnsoft@delphi.com>
Message-ID: <5o90y-s.mtnsoft@delphi.com>
Source record: 178383

Mountain Software would like to wish you a joyous holiday season.
To make the season even brighter, we are offering very special
prices on our most popular products:
==========
The Recipe Box
The Leader in Recipe Storage Systems
Sale Price: $25.00 (List: $35.00)

The Recipe Box is a complete meal management system for the Atari
ST Computers. It includes a full featured recipe database that can
store up to 2.5 Million recipes (including nutritional data), a
Daily Meal planner, a grocery list planner, a user editable calorie
chart, and a built in text reader. Use the search feature to find
your favorite meals quickly, resize them to any amount, and batch
print or export several meals at once. Recipes can be imported
from Meal-Master, Computer Chef, Assistant Chef, or any ASCII Text
file. Recipes are exported directly in Meal-Master 7.0 format for
easy exchange with other platforms. Recipes can be printed on any
printer using standard ASCII text, or using GDOS and the fonts of
your choice. The Recipe Box runs in any resolution (Color or
Monochrome), on any ST/TT/Falcon, from floppy or hard drive, with 1
Meg RAM. The Recipe Box multitasks with MultiTos or Geneva, and is
SPEEDO-GDOS compatible.
==========
Mountain Reader II
The Finest Offline Message Reader
Sale Price: $20.00 (List: $40.00)

Mountain Reader II is the finest offline message reader for the
Atari ST. It combines the most compatible QWK reader with full
BLUEWAVE support. It is the easiest reader to configure, and a
built-in hypertext help system provides immediate assistance when
you need it. Mountain Reader II supports 65536 message areas, with
65536 messages per area. Messages can be read sequentially, or
using any combination of message and/or conference prescanning. The
internal text editor makes message entry a breeze and includes an
easy to use quote feature (external editors are supported). A
built-in tagline manager features importing and exporting,
searching, and tagline "stealing" from any message packet.
Conferences may be configured offline, and Bluewave users can make
offline file requests. All bulletins are supported with full ANSI
emulation. A user definable search system allows you to quickly
locate messages. Other features include a built-in E-mail address
book, a bookmark system, user lockouts (twit list), support for
conference mail/file attachments, and group mail (carbon copies).

Mountain Reader II runs in any resolution (Color or Monochrome), on any ST/TT/Falcon with a hard drive and 2 Meg RAM, and multitasks with MultiTos or Geneva.

==========

Special pricing ends December 31, 1994. Prices apply to direct sales only. Foreign orders add $5.00 shipping. Orders must be paid with a MONEY ORDER to qualify (US FUNDS ONLY!).

Send orders to: Mountain Software
6911 NE Livingston Road
Camas, Washington 98607 USA

Source record: 178391

I, too, would like to see Mosaic available for the Atari computers. While my own system should be able to handle just about any requirement you set other than a Falcon platform, I would say from observing messages over the past few months that anything that doesn't fully support everything from a 520ST with TOS 1.0 and single floppy drive to decked-out Falcons and TT030's with video boards is going to upset someone. There's a lot of Atarians either still happy with their aging systems or unable to upgrade. Broad support for even the skimpiest systems seems expected from a lot of folks, so be ready for critisicm if you find that Mosaic can't be implemented on anything less than a robust system.

As for personal preference, simply make it a solid, well-tested package that will run under existing multi-tasking systems (but does NOT require them) and relies as little as possible on external programs/OS component replacements (such as MINT). DON'T skimp on the documentation, and don't even think about mentioning delivery dates until the package is ready to ship!

WANTED INFOCOM GAMES

Wishing to purchase the following original INFOCOM games
MUST have ALL original packaging and be in good condition

Any computer format

Seastalker
Sorcerer
Wishbringer
Deadline

Zork Trilogy
Enchanter Trilogy
Classic Mystery Library
Science Fiction Classics

Also interested in early Infocom games i.e the ones with the wierd
packages such as

Deadline police folder in 302x256x3 pouch
Suspended 240x317x70 box with recessed white face mask
The Witness police folder in 302x256x3 pouch
Infidel 235x304x8 folder in form of writing case
Sorcerer 308x239x12 box
Seastalker 238x300x7 folder

ALso looking for Infocomics such as

Lane Mastodon vs. The Blubbermen
Gamma Force in Pit of a Thousand Screams
ZorkQuest: Assault on Egreth Castle
ZorkQuest II: The Crystal of Doom

Willing sellers please e-mail details for negotiation

THanks

Keith Stewart

PS I already have Lost Treasures of Infocom I & II

CoNnect [simply the best! German with English docs and support]
FZTerm

I prefer CoNnect, it's fast full GEM, comes with super script language
and the CoSHY (connect shell) is better than some comercial CLI's...

>Furthermore, on what configuration would you be wanting to run
>Mosaic - would this be MiNT plus MiNTnet, or should we rather provide
>built-in support for dialup SLIP with additional services such as ftp?

Please DON'T do built-in support for SLIP only. There are people around
which must use PPP (due to a not 8bit clean dialup link) or have no
SLIP or PPP account and therefore use term to redirect internet services
to their local machine.

And one never knows -- one might connect his Atari via Ethernet to a local
LAN... (to be able to have a look at those movies or pictures without wait-
ting for hours).

So please don't reinvent the wheel. MintNet will soon contain Ethernet
support, and I'm going to port it to Magix one day.

If you don't want to support MintNet, then at least make the socket inter-
face compatible to MintNet so everyone that wants to use MintNet is able
to do it.

If you need information about MintNet, don't hesiate and ask me. I will
support you as good as I can, because I'm personally interested in such
a Mosaic like thingy.

Kay Roemer.

> [...]
> If you ever opened the case of a TT and tried to fix one you'll know why
> the TT was available in such small quantities. The machine just wasn't
> designed to built on a production line!

Well, yes and no. Early versions were admittedly pretty close to "prototype design", and the TT never really achieved any large volumes. There were later revisions however, and I think MegaSTE and TT ended up sharing many of the same production facilities.

> I mean, who would design a
> machine where parts had to be part assembled before the final soldering
> of the VME bus was done by hand, then some of the metal shielding had to
> be bent into place.

Later TT's didn't have metal shielding, instead one utilised an aluminum spray on the inside of the plastic casing. How design progressed on some of the subassemblies I don't know. But normally any production design will have a multitude of subassembly and component alternatives, some more "handmade" than others, and will use whichever one is realisable at any given time depending on the availability of specific components or production lines.

> Whatever else you may say about the PC design, at least it's easily put
> together on a production line.

Well, you are talking about a whole different scale of production with many many more manufacturers involved and competing with each other. Also it is still possible to find less than perfect PC design too.

Not necessarily! The Atari's OS is really ATARI's GEM. Novell (who
bought out DRI a few years back) has been 'revamping' GEM for other
purposes, but I don't know all the details.

: Can anyone help me out finding programs that let me play samples (.SND)?
: I found a nice one called "snd_play.acc" but unfortunately it has some bugs in it
: so it messes up the GEM screen, and I think it has bombed out a few times too.

: I would also like to get hold of a program that will let me assign samples to
: various "beeps", like if you move outside the file selector etc. Not just the
: "sysbeep" thingy, but for different areas of GEM.

: Someone else mentioned a few programs like that, but they can't be found anywhere.
: So, which program(s) are available and where do I find them?

: Thanks.

Ther is a program called GBELL which only works on an STe. It allows you to
assign samples to different 'events'. It's probably available on the major
ftp sites such as Hensa and AAUE.
Cheers,
Dave

1629. Help with diskdrive needed (?)

Newsgroup: comp.sys.atari.st
Date: 1994-10-26 11:02:44 UTC
From: W.Koster@rc.rug.nl
Message-ID: <CyA1CL.3ux@rug.nl>
Source record: 178309

Hi there,

I (well my mother) have an Atari 1040 STf. The problem is that the applications bomb-out. I suspect that the diskdrive isn't working properly. Since it is an old machine (this is a typical Dutch frase, litteraly translated to English, so it propably stinks :-), but still in use, I would like to try if I could hook on an old (second handed) external non-Atari diskdrive.

Is this possible, and can I reach it as drive B: or how do I do it ?

Any help is welcome.

Willem Koster
(Please Cc: W.Koster@rc.rug.nl)

1630. AUTO Folder + Spectrum FTP SITES

Newsgroup: comp.sys.atari.st

>15Hz.
>

Go for the Microvitec MultiSync (I forget the product code), it really is
the Dog's B*llocks. It goes down to a 15Hz scan as well.....
Note that the newer NEC 3d 's DO NOT scan down the 15Hz, only ones over 3 years
old (so you could try scouting for a second hand one).

But hell, I use a cheapo 149.00 (UK) SVGA multi-frequency (switched freq ranges)
and that gives me a tidy 800*600*16colours with no extra hardware on my falcon
at all (maybe I'll buy BlowUp or ScreenBlaster one day, but in 2 years I've
never felt the need).

Craig.

On Tuesday October 25th at about five past six
jyoung57@delphi.com (*jyoung57*) happened to write:

Hi folks!

J>Well, I was told by SS that 3.0 would be available in October, but you
J>know how that goes...Anyway, 2.5 will keep me happy in the meantime..

I received my *NVDI 3.01* today.

Its really cool. *Very easy* to install. Just enter your serial#, click to get the font-path, and there you go.

Drivers for all major printers. Even 600dpi laser- and 720dpi inkdrivers. Everything is neatly controlled through a couple of CPX-modules. A tool for easy custom-creation of your own printer driver is included as well.

Talking speed? Wheew, *very* fast indeed. Forget Sp**d* 5.0. But you'll need quite a lot of memory if you install many fonts.

I bought a Bitstream 500-font-CD and I can access all of them without problem directly from the CD. NVDI scans the subdirectories in the fontpaths (yes, you can have multiple paths!) as well!

Now I have all the fonts I need, and more. Much more :-)))

1638. Printer Capture from Calamus 1.09

Newsgroup: comp.sys.atari.st
Date: 1994-10-26 13:20:05 UTC
From: st39@unix.brighton.ac.uk
Message-ID: <1994Oct26.132005.6064@unix.brighton.ac.uk>
Source record: 178333

I would like to capture the print output from Calamus to a file. There are a number of programs that do such a thing, but all the one's I have tried don't seem to work with Calamus's print routines.

Any ideas etc... The reason why I want to do this is because I want to print using a LaserJet on the university system. So if I could print to a file I could put this file onto the univeristy system and just dumpit to the printer.

Parts of the web would be *extremely* boring in mono, if the product is
properly written it will function in all resolutions in however many colors the
user wants. That way if you want to only use it in Mono you can, and if someone
else wants to use it in low-rez they can, or if someone has a video card they
can use that. Simple, elegant, functional, and nothing to argue about as it
will make everyone happy!

Erm, which audio output jack do you mean? The CD audio comes from a
separate connector on the back of the bare CD drive, it's completely
separate from the computer audio.

>Does anyone know anything about a program called UPoint Light? Rumour has it
>that this is a program similar to Mosaic? If it exists, where can one
>get it?

Upoint Light is a GEM UUCP package. It can be found at
atari.archive.umich.edu under Network/Uucp. Describing it as similar to
Mosaic is a stretch. Upoint does not do http or really anything else
relating to the WWW. So in that case it's not similar to Mosaic.
However it is an all GEM based, extremely user friendly implementation of
UUCP. So if you can access your provider via UUCP this is a very nice
way to do it. By the way it is now up to medium.

So it's easy to use like Mosaic, but it is NOT an interface to
the Web.

>opinions on this?
>-scott tirrell

Sure, there is always 'a slight possibility,' but it remains just that. It is very difficult for us 'mere users' to understand the complexities (financial and otherwise) that would make Atari hesitate to undergo such an agreement with a third party. It seems to us like it should be a logical thing to do. But Atari has historically been -very- tight with their proprietary information and very short sighted, IMHO, in the licensing and/or distribution of the same. They have always concentrated on the 'quick buck' and for them to turn over TOS development to someone else doesn't really fit their modus operandi, unless they could actually SELL it outright for a large amount of cash; something I think is highly unlikely at this time. Then there is always the problem about support of such a product that they -should- be concerned about, although that's not very typical of them either. :)

They have continued to lose money in the computer arena for a number of years due to mismanagement, poor business decisions (anyone remember the Federated fiasco?), extremely poor marketing, developer non-support, etc, etc, ad nauseum. The only way they have managed to stay afloat this long is by cutting services and support to the bone, again a short-sighted decision. Now they have come up with a product (Jaguar) that is showing them a slight profit. With such extremely small staffing and limited resources, where do YOU think they will invest their time and money? One thing is fairly certain... it's not likely to be in personal computers.

Oddly enough, perhaps the best thing that could happen would be for Atari to 'officially' drop all support and future personal computer development. In that scenario, I would think they would want to sell off all their proprietary information, or at least license it out, which would open the door for third parties to take the ball and run with it. Whether or not those third parties would consider that financially feasible is unknown.

This is just IMHO, of course, and only time will tell what really happens.

Cheers,

-Hutch- @ Fair Dinkum Tech

: > Now - what we really want is for Atari to release TOS 4.92 along with the
: > next PD MiNT binary release (I believe this is due RSN).

: Absolutely true, if anything ! If Atari doesn't want to continue developing
: AES, it really should give AES 4.1 beta to Public Domain. This beta version is
: so damn good that it really _is_ a crime to keep it unreleased !!

: Btw; all Atari multitasking systems seem to have one problem in common: when a
: fileselector pops up, all other processes freeze up =-(. While doing some data
: transfer this simply isn't acceptable, because: pause -> timeout -> problems...
: The same thing occurs when you use menus, or the disk drive reads or writes.
: Can anyone tell me, why these things can't be improved - when e.g. Mac OS
: handles them better?

I think that the fileselector runs in Supervisor mode is why this
happens. I don't know why? I would assume since AES is the highest OS
service, it would call XBIOS, BIOS, and GEMDOS, and they would run in
supervisor only.

I assume that the publishers insist on keeping the name 'ST Action' for the
games section of a current magazine, so that the trademark is kept active.
Although it's unlikely that Europress would ever want to restart Action as a
separate magazine, it prevents anyone else from doing so.

>So why vote against it? Why not say "well, I think they're stupid, but if
>that's what they want to do, just let those wacky Falcon owners go away
>and leave us to our own business".

I would vote against it for the reasons I've already stated, that being, it's easier for me to read fewer newsgroups and I think (just IMHO) that it -would- lead to more cross-posting. BTW, I'm one of those 'wacky Falcon owners' too.

>It's noteworthy that you have so much to say on a topic you're so
>ambivalent toward! <grin>

You are mistaking 'cooperation' for 'ambivalence.' I would -prefer- to have fewer newsgroups, but it's not worth my time to argue about. The one possible exception is the .programmer proposal as I consider those topics to be of sufficiently narrow interest to make a separate group worthwhile. I don't personally believe the argument for a .falcon group is that strong, but I will cooperate with what the majority decides in a vote. That's NOT ambivalence!

>Heaven forbid we find a topic you're all gung-ho for!

Try me on software piracy issues. ;-)

>I still don't understand what the big deal is.

Me either. But all this is still just a moot point until someone takes the initiative and goes through the process for a formal .falcon RFD and CFV. Lot's of talk, but very few who are willing to expend any real effort. And that's curious as there seems to be a lot of support for the idea.

>have never heard of before; HH rmail and MNEWS. Where is this stuff
>available from??

Speaking of NN, I've compiled the latest beta release (6.5.0), with
the Overview database, on my ST to use over a SLIP link using NNTP.
(Runs under MiNT and MiNTNet; sorry John..)
It starts up, talks to the news server and downloads the list of active
newsgroups. Trouble is, my 4Mb ST (with ~2.5Mb free, after everything's
installed!!!) just can't cope with NN's memory requirements when
connected to a full (and I mean _every_ group in existence) usenet news
feed. :-(Remember, we're just talking about downloading the active
news group list here. I don't expect to download the contents of _every_
group! The overview database resides on the news server so I don't need
a local database either.

Has anyone else ported the latest NN and found a way to cut down on its
memory requirements? For example, dumping stuff to temporary disk files?
Speed isn't too much of an issue, as even on the news server, NN runs
pretty slow due to the system load.

I'll look into this myself over the next couple of weeks, but if I'm
re-inventing the wheel, someone let me know! If I'm not, and I get it
going, would there be any interest if I uploaded it to umich? Heck,
those of you with 14Mb Falcons could probably go with the binary I have
currently; lucky buggers! ;^)

Cheers, Steve

Is there such a thing as a good PD/SW plotting program for the ST? I want something that uses GEM (so I can multitask reliably under Geneva), is fast, supports both equations and data files, and support for TeX and/or Postscript and/or GEM metafiles. Nice goodies would be curve fitting/splines/regression, the ability to point to an area on the graph with the mouse and have the program tell me what coordinates on the graph the pointer is. I tried GNUplot (from a.a.u.e) but it doesn't really run reliably on my system...

It sure is, (although i got my Key). Aaron is rather stupid in my opinion.
He also promised a update so a few bug would be fix'd and s it should run
better on the Falcon. since he posted that promis, he just dissapeared.

Even though i know it's illegal, i'll say this program deserves to be on
the pd market.

I can't answer the original question, but I would not agree with the
1024x890 pixel minimum. I run a Linux box under X with 800x600 pixels
at home, and, as long as you can run a window manager like fvwm (which
allows you a virtual desktop bigger than your real one) I don't feel
that this is a problem. Of course
a) 1024x890 is more impressive :-) and
b) Macs make bad Xterms (at least MacX is an ugly piece of software,
IMHO).

1661. WP/DTP Package with Postscript output?

Newsgroup: comp.sys.atari.st
Date: 1994-10-26 17:28:52 UTC
From: Graham.Irvine@mettav.exnet.com
Message-ID: <783225028.2@mettav.exnet>
Source record: 178327

It was none other than Paul Donovan that wrote on 19 Oct 94 that ,
PD> documenting my final year project. I therefore need a decent
PD> package for my Falcon which will allow me to produce a Postscript
PD> file which can be sent to one of the printers here at Uni.
PD> 4) Anything I haven't thought of...
PD> In the report I will need different font styles and sizes, simple
PD> .GEM drawings etc. (and contents generation would be nice)

Pagestream V2.2 is certainly able to do all this (and more) and is a much
better proposition on the Falcon than it was on the ST ,the screen
redraws are at an acceptable speed now. EXCEPT ..and this is the
tricky bit I beleive its postscript output can be a bit awkward at times . I
cannot give examples as I have never tried outputting to a PS file but I think
you have to stick to the 'correct' font types to get it to work succesfully.

Source record: 178328

It was none other than Hutch that wrote on 20 Oct 94 that ,

H> Yes, of course I'm being facetious, but it does point out the need
H> for careful consideration as to what the 'optimal' number of
H> newsgroups really is. The amount of existing traffic flow really
H> SHOULD play an important part in this decision.

personally I don't see any problem with the above . Does it matter if you have
1 area with 100 messages or 20 with 5 it all adds up to the same ??
OK it might amount to some crossposts and it might grow to 20 with 7 or
something but IMO that would still be more handleable in general..
I would just take the lot anyway ....plus a few you missed out ...

e.g *.atari.lynx :-)

The idea of loads of smaller specific newsgroups works very succesfully in
NeST, Atarinet,Turbonet etc so I think it would here aswell. The problem with
having one large newsgroup is you have to sift through a hell of a lot of stuff
that I am not that interested/concerned/or can offer help on directly whereas
IF there were more smaller newsgroups there would be some that I could
gaurantee to be interested in every posting and would invariably read it in
detail and then there would be some that I could scan
more lightly and of course others in between which I can concentrate on IF I
have more time... this problem can get quite bad if I don't poll in for a
couple of days I can find 300 messages waiting for me in here
and that takes HOURS to read :-(

H> I find the argument for a .falcon newsgroup to be somewhat less
H> persuasive.

well going back to the other nets eg NeST (and i'm sure anyone who uses that
will back me up here)..the Falcon specific newsgroup is FAR busier than the ST
one !!

H> should prevail when considering adding multiple newsgroups given the
H> limited number of daily posts we experience in the current
H> newsgroups.

This newsgroup has been the biggest (usenet) one that my feed supplies for
quite some time .... bigger even that the ALT.SEX and UNIX ones :-)
But only because we have a more limited number of sub.newsgroups I would
suggest than because we have more users ...

Source record: 178332

] I have been trying to use a program called BACKDROP.PRG by Thomas Kroebel
] which displays a picture on the desktop. The program runs OK and displays
] the picture from GEM, however, when I put the program and the picture in
] the AUTO folder nothing happens. The user manual is in German so this does
] not help matters!

Programs in the AUTO folder, unless specifically told otherwise, will
look for their data files in the root directory. (A:\ or C:\ usually),
so just copy the picture into the root directory (with the ACC's and
DESKTOP.INF/NEWDESK.INF files), and it should work.

Sadly, most of the accelerated Falcons also use a 16MHz mother-board.

By the way, until the '040 cards show up, I'm on the 16MHz list as well. :-(

Source record: 178335

Hi.

A friend of mine is looking for a 20 MB SCSI disk for his 8-bit atari.
NOTE: He wants a _20_ MB disk, because that's the only size disk he can use
with the ICD (multiboard) interface for the Atari XE.

Alternatively he is looking for an ADAPTEC 4000A interface.

He will ofcourse pay for the shipment to Norway as well as the
disk/interface.

So - anyone with any of these items gathering dust, don't hesitate,
reply to this message and I will forward it to him.
Or you could contact him directly with snail-mail (he is not wired) to the
following address:

Vidar Olavesen
Oestaveien 2

Some MultiSync monitors will sync to any resolution in range others have a set of fixed resolutions and you just get the best match.

1670. Newsgroup Reorganisation

Newsgroup: comp.sys.atari.st
Date: 1994-10-26 20:12:55 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <10261994.201255@empyr.dircon.co.uk>
Source record: 178264

Hi,

I have noticed a lot of discussion lately about reorganising the Atari newsgroups.

There have been lots of proposals, lots of opinions voiced, and not a lot seems to be getting *done*.

How about getting an idea of who wants what, before we go into RFDs and voting ? By that I mean inviting suggestions of how the group should be subdivided - a one liner saying what newsgroup(s) you personally would like to see. Not paragraphs of discussions and arguments, like we are getting at the moment. Then we can see what people want, as a starting point. Then if there is enough interest in any particular group, someone could put together a RFD for that group, and take it from there.

I know there are probably guidelines on doing this sort of thing, but I doubt if they cover multiple newsgroup creation. Anyway, this is just an idea, and whatever happens, surely there must be a better, more organised way to get this sorted out than the current chaos that's going on at present.

For what it's worth, I would like to see the atari.st remain, atari.st.tech divided into 'Atari.st.hardware' and 'Atari.st.programming' and a new group, 'Atari.falcon' added.

What would *you* like ?

This sounds strange to me, but without more information about
your setup it's almost imposible to help.

You are compiling MiNT 1.10 without patches i guess?
Try to patch up to h9.

You are using GCC (i guess)?
Which version?
Anything other than 2.3.3 and 2.5.8 and maybe 2.4.5 are reported
to be not reliable.

You are using the MiNTlibs?
Which version?
Anything below pl31 is not reliable, i'm working with pl 39, pl 43
is ok.

If you change anything (compiler/libs/MiNT-patch) remove all the
.o files.

-A37040@AC3

NP>If anybody knows something about how to work with VMEM 1.1 , call !

It was an old project of mine. I never had the time to rewrite the old code but I decided to release the sources to the public, so maybe someone could use it in his own program. It is _not_ a Virtual Memory Handler as used within 68030 and 68040 based systems, so you don't get additional memory for your ST, unless your programs use the library.

What it does is quite simple: you can use the space on your harddisk with a small library to keep large amounts of data stored on disk instead of memory. Only a little cache is used to get an access window for the whole data. Prior to accessing the virtual memory file, you call a function which handles all the data swapping, so you can access the data of the file without the need to know, whether the data is already stored in the cache or not.

Regards,
Robert

From: hopper_t@msupa.pa.msu.edu
Message-ID: <38misj$14kd@msuinfo.cl.msu.edu>
Source record: 178350

Hello,

I'm looking for a good calendar program that will give me nearly (if not actually) unlimited daily entries. I want to use it to keep track of events rather than as a scheduler, so I need it for things like Birthdays and special events but not to schedule every hour of my day.

I've tried Calendar 6.3 by Bill Aycock and I really like it (esp. the ability to display events x days in advance at boot up). Unfortunately, it's too limited in the total number of entries available.

Entries must be by day of year (Jan 1st) and by position (3rd Saturday of each month, or 2nd Monday of February).

Anyone know of any calendar programs that will fit the bill?

BTW, English is preferred but not required.

Thanks,

Tom

I saw a letter in a recent ST Informer magazine that claimed the company
that does/did Heatseeker took his money and never delivered the product.
He theorized that perhaps it does not exist (the product, that is). I don't
know if this is true or not, but one might wish to check before depending on
the ability to buy this product. If Toad has them in stock, that would be a
good sign :-).

Atari have stated many many times to upgrade to TOS 1.4, I think that people
are supid if they don't, TOSes below 1.4 have far to many bugs to work around..

I don't thing you will see Mosaic on any thing less than a Falcon/TT, the
other Atari machines do have the screen resolutions, also I thought that
Mosaic had to be run from a Slip/Tip connections, and your system
would have to implement a Unix type system, I could be wrong on this,
but may be some one can post the minimum requirements of a Mosaic connection..

So Please do yourself a big favour, get TOS 1.4 fitted tou your Atari....!!

1678. Atari Software for Sale

Newsgroup: comp.sys.atari.st
Date: 1994-10-26 22:21:15 UTC
From: Doug Finch <76337.1067@CompuServe.COM>
Message-ID: <38mkor$2r7$2@mhade.production.compuserve.com>
Source record: 178348

ATARI SOFTWARE FOR SALE
I bought several boxes of Atari software (and a few non-Atari items) at an auction in which a retailer's inventory was liquidated. As I result I have surplus items which I would like to sell immediately. All of these are unused, unopened, factory-fresh, in original boxes. All 8-bit items will work on 400/800, XL and XE machines, all of the games are cartridges; productivity items on 5.25" diskettes. All ST software is on 3.5" diskettes.
The games and programs are, for the most part, vintage but nonetheless entertaining, playable and/or educational. I'd just like to see that they get into the hands of folks who can put them to use.
As for shipping, I will send to USA locations via non-priority U.S. mail or UPS delivery. Buyers outside the US should enclose an additional $2 (US) per item for shipment via surface mail). Best to contact me by E-mail if you're unsure about anything. Here's what I have:

SOFTWARE PRICE (Incl. US shipping)
8-bit Games:
Defender (CXL 4025) = $4
Asteroids (CXL 4013) $4
Joust (RX 8044) $4
Qix (CXL 4027) $4
Star Raiders (still the greatest!) (CXL 4011) $4
Sky Writer (educational) (RX 8059) $4
Music Composer (educational) (CXL 4007) $4

8-bit Productivity:
AtariWriter Plus (powerful 8-bit word processor w/spellchecker incl., on disk) (AX 2034) = $7.50
Home Filing Mng. (file card sys.) (CX415) $4
Master Diskette (DOS 2.0 w/manual and explanation of 810 disk drive, commands) (CX8104) $7.50

ST Games:
Missile Command (arcade classic) (DS 5018) = $4
Battle Zone (tank shootout) (DS 5020) $4

ST Productivity:
Haba/How to Write Professional
Business Letters (boilerplate specials) = $5

NON-ATARI ITEMS FOR SALE (All are unused)

SOFTWARE PRICE (Incl. US shipping)
For Apple II,IIe,IIc:

Silent Service (Microprose) = $8
Winner of various adventure & simulation awards

For Commodore 64:

WordPro 3 Plus/64 (Professional Software Inc) = $5
Word processor with spellchecking module

HARDWARE
For IBM compatibles:

JT Fax 9600 daughter board (JTFAX96D) = $10

Drop me a note via E-mail to make sure I've still got what you're looking for and for my mailing address. When I confirm I've got your item(s), and your check or money order clears, I'll ship immediately. If anything doesn't work, I'll replace it or refund your money, provided you pay for reshipment. Bonus program included (my choice, you specify 8-bit or ST) while supplies last. Enjoy your Atari!

~ Ducky's 1994 Fall Clearance Sale ~

Yes folks, my loss can now be your gain. Since I no longer have my ST set up (I'm flying with a Falcon030 now) I have decided to liquidate all of my software which are no longer compatible. Take a glance at the following list, virtually any piece will provide hours of Atari entertainment!

Software

= Indiana Jones & the Last Crusade Graphic Adventure ($ 10.00)

= Dungeon Master- the classic RPG game ($ 15.00)

= Magic Fly ($ 15.00)

= Super Space Invaders ($ 10.00)

= Cruise for a Corpse ($ 20.00)

= The Chaos Engine- great Bitmap Bros. game, now known as Soldiers of Fortune on the consoles ($ 20.00)

= Railroad Tycoon ($ 15.00)

= Treasure Island ($ 5.00)

= Vroom!- terrific racing game ($ 15.00)

= Powermonger- game by Bullfrog, similar to Populous ($15.00)

= Highway Patrol II ($ 7.00)

= A.P.B. ($ 7.00)

= Clue- Master Detective ($ 7.00)

= Test Drive ($ 10.00)

= GODS- another great Bitmap Bros. game ($ 15.00)

= Tennis Cup ($ 15.00)

= Certificate Library 1 for use with Certificate Maker($ 5.00)

---- The following do not have original boxes but include original disks and manuals only...

= Advanced Art Studio ($ 5.00)

= Art and Film Director ($ 7.00)

= Mission Impossible II ($ 5.00)

= Death Sword ($ 5.00)

= Championship Wrestling ($ 5.00)

= Battleship ($ 5.00)

= Dive Bomber ($ 5.00)

= Starglider ($ 5.00)

= Sub Battle ($ 5.00)

= World Games ($ 5.00)

Order under $50.00 worth and you pay shipping/C.O.D. charges.
E-mail me if you'd like to make a package deal!

Source record: 178345

-Unknown- bibbled on 18 Oct 94 to All...

bo>> Problems. It's a compiler for GFA Basic 2.0 and i've got GFA 3.5.
bo>> What i'm after, is either the compiler for GFA 3.5 (preferred) or
bo>> GFA Basic 2.0. Are these available for FTP from anywhere or do I
bo>> have to mail order it from somewhere ... if so, where?!
>
> Your problem is that GFA 2.x uses *.BAS -files and GFA 3.x *.GFA
> Those file are different in format and not compatible, so you would
> need to have an compiler for GFA 3.x or GFA 2.x

They are compatible to an extent. All you do is save the code as a .LST file
and use the merge command in 3.5 to load it. You lose any INLINE code (can't
remember if version 2.x allowed INLINES but there you go) and some of the
commands don't work in the same way - but these are explained in the compiler
manual.

> I would recomment to get the GFA 3.5 (NOT 3.6 -that version is for
> TT and Falcon), because it compiles lots of options you don't have
> with 2.x e.g. the GEM-commands.
> But, that's just IMHO...

Not really, version 3.6TT works on _all_ machines and it's (well, the compiler
really..) actually recommended if you want to write completely compatible code.

That's not to say that older versions won't work on the more advanced
machines... my s/w does.

> GFA 2.x is not PD, so there shouldn't be an ftp site where you can
> get it, but it doesn't cost much (In holland it's 25 guilders, about
> 10 pounds).

In the UK many PDLs sell earlier versions of the interpreter at more or less PD
prices, so it's a good place for the budding programmer to start...

Ducky,
Run Dungeon Master with Backwards and you'll be all set! I
don't know about any of the others but you may want to
check the Falcon compatibility list to see if any other
programs you've listed can be coerced into working.
BTW, like your sig. Squint was indeed a good album. Not
as good as I Predict 1990, IMO, or Chagall Guevera musically.
Favorite song on Squint- The Finish Line. Have you seen the
videos? (Answer in e-mail if you wish as to not to annoy
everyone :-)

I've never used GNU Moria, but I regularly use a port of Moria 5.4 which
is around (I think I got it from atari.archive), and I've never had any
problems with that.

Cheers,
John

>
> Is this possible, and can I reach it as drive B: or how do I do it ?

Yes, it is possible. Ftp to atari.archive.umich.edu and get the files
ibmflop.lzh and genflop.lzh (look in the index for the exact location).
These both give intructions for hooking up generic floppy mechs to the
ST. As for drive a/b, you can install a simple switch on the Yamaha
sound chip to control which drive is A (internal or external). Here are
some instructions for this mod (I cut the two pins off using a Dremel tool,
then soldered the wires on the stubs, and it worked fine), kindly submitted
to me by S.P.Taylor@bradford.ac.uk.

Incidentally, it is probably just as easy to mount a non-atari drive inside
the machine. You will probably have to cut the case a bit, but it can be
done neatly.

--begin included hunk--

From: S.P.Taylor@bradford.ac.uk
Date: Sat, 3 Sep 94 17:28:13 BST

[........]

: Failing this, how hard is it to make the computer think an external drive
: is drive A? Could I do it with a fancy cable, or do I have to hack on the
: guts of the machine?

Yes you have to hack the guts of the machine. Which is dead easy! It was the
first hardware modification I did which succeeded!
All you need to do is to extract pins 19 and 20 of the Yamaha sound chip from
the circuit board, and solder wires onto the pins and the holes.
Be very careful not to snap th pins, or apply heat for too long
Then you need to either
a: if you want the drives permanently swapped, connect the wires so
that the wire from pin 19 goes to hole 20 and vice-versa.
b: if you want a switch to have the drives as swapped, or normal, get
a DPDT switch from your local electronics shop, and connect as
follows:

HOLE 19 - O O - HOLE 20
PIN 20 - O][O - PIN 19
HOLE 20 - O O - HOLE 19

This simply wires the pins up so they are as before, or swapped, depending on the position of the switch.

Hello!

I'm going to be traveling down to the Port Charlotte/Fort Myers,
Florida area in November and I plan on bringing my Atari ST along.
I'm wondering if any of you out there know of any stores which carry
Atari hardware/software or local BBS's that support the Atari in that
area? Please respond via e-mail. Thanks!

Jeff

(BTW, if anyone in the same area would like to buy a used 2.5meg
ST, 50 meg ICD HD, Spectre GCR, and monitor at the end of November,
send me e-mail for more info.)

>so damn good that it really _is_ a crime to keep it unreleased !!

Atari do not have the copyright for the AES, so there's no way it will
become PD unless Digital Research want to.

>Btw; all Atari multitasking systems seem to have one problem in common: when a
>fileselector pops up, all other processes freeze up =-(. While doing some data
>transfer this simply isn't acceptable, because: pause -> timeout -> problems...
>The same thing occurs when you use menus, or the disk drive reads or writes.
>Can anyone tell me, why these things can't be improved - when e.g. Mac OS
>handles them better?

MTOS, Geneva and MagiC do not suffer from this problem - it is up to the
application to use the correct AES calls to ensure background operation.

>-scott tirrell

I'm sure it is nice, but will it be any match for the TOS-clone, MagiC v3? MagicC 3 has the advantages of being out this year, being *very* fast, having MiNT-compatible features like loadable filesystems and a 3D AES. TOS 4.92 has the advantage of being official, the disadvantages of being a beta release, and unfortunately will probably never be released by Atari (IMHO).

So, why bother licensing TOS 4.92 out when people have made a better clone already?

I'm using my Falcon without a 32MHz board! It's not because they are
too expensive - I don't need them! I write demos and games and they
should run on all Falcons, not only tuned up ones. That's why I only
need the standard-configuration. With standard-configuration I mean 4
meg, 16 MHz and HD. 1meg-Falcons are nothing good for.

1704. How to change HD partition Atari -> DOS?

Newsgroup: comp.sys.atari.st
Date: 1994-10-27 11:02:44 UTC
From: kootstra@rivm.nl
Message-ID: <kootstra-271094114625@mackoot.rivm.nl>
Source record: 178171

Hello

I am using the Vortex AtOnce 386 DOS emulator. The current partition of the HD of my MegaSTE is two Atari partitions of each 12 Mb and two partitions used for DOS (each 12 Mb). I like to change this to one Atari partition of 12 Mb and three partitions usable for DOS (each 12 Mb). Does anyone know how to fix this?
I'm using the Vortex Installation programma with the following parameters

Atari DOS
C 0 2
D 1 3
E 2 0
F 3 1

Changing of the DOS-values 2,3,0,1 to 3,0,1,2 did not have any effect. Suggestions are welcome. Please respond, if possible with email to kootstra@rivm.nl.

Regards
Dirk van Setten

In this Sunday's Times (UK), it was talking about SPAMming, and one
of the people suggested that emailing the UNIX kernel to the offending
Spammer was quite a nift exercise....

Anyone? =:->

David

PS. It also mentioned that more of this is likely to happen in the future.
A strategy is needed then....

MSA are Magic Shadow Archive files. You will need the MSA program to
unpack them onto their own disks.

Synergya is probably disk A of the superb Synergy demo for the ST/E, at a
guess of course ;-)

: You can find the latest version of the list on ftp.uni-kl.de in
: /pub/atari/falcon/text.

: Ciao, Heiko.

If anyone is interested I have written a shell for this listing (and the applications one). You enter the name of a game (or as much of the title as you can remember) and it will scan the listing and inform you of all the details (ie what res, run under backward? etc...) and let you either dump the results to a printer or scan again. Like I said you can do a partial search on the title, ie a scan for 'LITTLE' would bring up 'LITTLE COMPUTER PEOPLE' or a scan for 'MAD' would bring up 'MARBLE MADNESS'.

As soon as I have finished the RGB version (it is only VGA at the moment, sorry I'm no GEM programmer!) I'll post it. The only thing is, if the format of the listing changes - eek! :)

Oh you only need the shell once, then you just replace the listing file as and when it's updated.

Yes, the final 1.11 version will be binary distributable. For the
1.11-BETA versions, Eric Smith had asked not to upload any source or
binary releases.

I received my registered copy of the STOS extension 'Missing Link' today.
The original (unregistered) version worked like a dream on my Falcon, but
this version is hell. Only some of the example programs work, I had to
sit down and recode most of them (mainly removing music). Oh will
someone PLEASE write a nice Falcon extension for STOS?!

I've got a Microvitec with my Falcon, and while it's not >quite< as swish
as some msyncs, it can do bout 1100x900 non-interlaced - excellent for
Calamus! A bit fuzzy when emulating ST High though. But who'd want to? ;-)

Ok, let's add a bit more of speculation. The fileselector runs
in a dialog box, and event handling is generally disabled in dialog boxes
(or in alert boxes). The same happens with alert boxes on the Mac, and
therefore on the Mac most dialogs actually run in windows, where event
handling is (necessarily) enabled. There are several GEM libs out there
which move dialog functions to windows to achieve the same goal.

1718. AtariWorks Crashes my Mega 4

Newsgroup: comp.sys.atari.st
Date: 1994-10-27 13:50:36 UTC
From: scotty@cybernetics.net
Message-ID: <38ob7c$8n@jabba.cybernetics.net>
Source record: 178289

Hello Anyone,

I have a Mega 4 ST (no e) with TOS 1.4, and I installed the AtariWorks that came with my Falcon 030 on its ICD hard disk, for my wife to use.

It works fine until you print something. After the printout is finished, the next thing one tries to do (like exit back to the desktop) causes the machine to lock up, requiring the reset button to recover.

This is more than an annoyance if one forgets to save the document! We've tried disabling the accessories and auto progs, including Warp 9, but that didn't help. Has anyone seen this problem before, and managed to fix it?

We also tried reinstalling SpeedoGDOS and AtariWorks... No help.

Thanks for any pointers!

It is on it's way, though early '95 is what I've heard... Here's what Merlin PD
had to say.....

Thanks for the message, It's nice to get something up here. The Falcon version
should be out next year but we are not sure about upgrades yet. As for the price we do not
know! We are speaking to the programmers tomorrow and should find osoon so hang on.
Sorry if this message is a bit strange, this terminal is breaking down, ithink!

Phineas Pope

So, yes, Obsession Falcon will be out, albeit early next year....

Well, it is a known name and therefore will (maybe) pull in some extra readers. We're also including a Jaguar section inside the mag (Jagged Edge) and hope that this will be very popular.

If you're the type of person who isn't into games then that's cool too - just don't read those pages. You are in no way missing out, since the page count of STR has been upped by 8 pages - the exact size of Action and Jagged Edge.

Actually, I've found quite a number of bugs in Atari Works. I could list some of them some time.

1728. Re: HELP needed- comms programs

Newsgroup: comp.sys.atari.st
Date: 1994-10-27 15:38:43 UTC
From: millert@scheifler.csee.usf.edu
Message-ID: <38ohi3$eu3@mother.usf.edu>
Source record: 178157

If you want a good, FAST terminal program that does very good 16-color ANSI emulation on a stock ST, get ANSITerm 1.90. The registered version also adds hardware scrolling, so it's even faster.

1729. High-Speed 1414 VQE modem problems.... Help?

Newsgroup: comp.sys.atari.st
Date: 1994-10-27 16:17:32 UTC
From: peseb@freeport.uwasa.fi
Message-ID: <38ojqs$qjl@zippo.uwasa.fi>
Source record: 178294

Hiya,
I just recently bough a High-Speed (Acctual Brand Name) 1414 VQE modem. It works fine except for one thing it won't send a BUSY response code when the line is busy, or It won't detect it at all... I have checked to see that all options are apperantly in order..ie. At&x4 for full detection of Carrier&Dialtone and Busy Tone....
I also checked the Incoming Signal Strenght.... It is -51 dBm...According to the manual the Recieve Sensitivity of the modem is -43dBm ... Is there anyway to boost the Incoming Signal Strenght ? Is This the problem at all?

I bought the modem in Germany and I live in Finland....
Could this be the source of the problem?

Help needed!
Peter.
Thanx In advance.

>but may be some one can post the minimum requirements of a Mosaic connection..

Theoretically I see no objection to running something like Mosaic on a
1 meg 8mhz TOS 1.0 box with b/w monitor. That should work. But
don't expect to be able to load more than 5 images...

As to the SLIP connection, this can all be built into the application.
It will be a largish, I expect some 600K executable, so maybe
1 megabyte is not enough. (You will need built-in SLIP, built-in
text editor, built-in shell window for telnet sessions, built-in
FTP, nn etc.)

OK, so how far can a SVGA monitor be pushed ?
What I want is a monitor that can do 640x??? in True colour mode.
I suppose this is too much for something that is not a multisync.

Am I right ?

Cheers,
Phil.

IW>Hi there,

IW>I (well my mother) have an Atari 1040 STf. The problem is that the
IW>applications bomb-out. I suspect that the diskdrive isn't working
IW>properly. Since it is an old machine (this is a typical Dutch frase,
IW>litteraly translated to English, so it propably stinks :-), but still
IW>in use, I would like to try if I could hook on an old (second handed)
IW>external non-Atari diskdrive.

IW>Is this possible, and can I reach it as drive B: or how do I do it ?

IW>Any help is welcome.

IW>Willem Koster
IW>(Please Cc: W.Koster@rc.rug.nl)

Willem, you can use an external floppy as Drive B:, but the problem is
more likey to be in the poser supply. you (or a friend) can remove the
power supply, and resolder all the connections on the bottom of it, as a
first step to eliminating the problem. If that doesn't do it, try
looking at the bottom of the ST's motherboard - any "gray" solder joints
(ones that are not shiny silver) should get the same treatment.

This is time-consuming, but usually solves the bombing problems you
mentioned.

IS>What other types of HD's can I put in there? Is it MFM/RLL/SCSI/IDE? I
IS>have no idea, I have never opened it....

I believe the Megafile 30 uses an RLL drive (could be wrong, wouldn't be
the first time - today). It SHOULD support 40, 60, and possibly 85 mb
MFM drives as well as 30, 45, and 72 mb RLL drives. Get a return
guarantee from the seller, just in case.

I say yes. The comments about the traffic being so low as not to warrant a new group are all very well for those who have free/fast connections and threaded newsreaders (like me at the moment: I'm at university) but at home I get internet newsgroups gated through to my fidonet system (where the newsreaders' threading isn't really good enough) on a 2400baud modem. I would certainly subscribe to comp.sys.atari.programmer, but the traffic in other forums is too high for me at home.

Many specific forums with relatively low traffic certainly works well on NeST, producing more focussed discussion. I can't see why it wouldn't have the same effect here.

Hi!

ST>I would like to capture the print output from Calamus to a file.
ST>There are a number of programs that do such a thing, but all the one's
ST>I have tried don't seem to work with Calamus's print routines.

You cannot capture the printer-output with a common spooler or so. Calamus
uses its own routines to print.

But Calamus usually comes with a *ToDisk* -driver. AFAIR the driver prduces an
image with all the necessary ESC-codes. So you should be able to copy this
file directly to the printer.

And as DR is owned by Novell - I'm surprised Atari can even sell GEM any more. Well I would be except somebody here assured me over a year ago that Atari had bought the rights to GEM and could develop it as they liked. Anybody know for sure? If Novell do own the rights - then where does that leave NVDI, MagiC etc?

Roland.

Okay, I think you are right about the ease of portability, but most
software I've seen from *IX for mail and news handling via UUCP, doesn't
really need to be running in a multi-tasking environment as the concept
of queueing data by files is the whole point of a UUCP-Mail/News system.
(I agree that for IP connectivity that multi-tasking with daemons
waiting on certain ports is part of the design). There are ways of
porting *IX stuff to TOS with a little forethought.

>: I for instance aren't so interested in UUCP/Mail/News solutions for MiNT

>: have never heard of before; HH rmail and MNEWS. Where is this stuff
>: available from??

>Never heard of a port of NN to TOS !? What is "HH rmail" and "MNEWS ?"

Well, NN _is_ ported to run under TOS, it's available from
ftp.uni-paderborn.de in the /pub/atari/tools/dfue path, and also from
atari.archive.umich.edu in one of the paths under their Networking/...
hierachy. :-)) As for HH rmail and Mnews, I don't know except that they
are mentioned as part of the example setup's for NN in the readme of the
above port. As the port is of German origin, I assume that they are some
sort of software from some German source either a port or original.

>Well, here is a small part out of D. Ackermann's.... TCP/IP FAQ:

Everything Hutch says about GEnie being the best thing since sliced bread for Atari users is true. I understand there's a ton Atari information and stuff to download. I didn't have much luck locating and downloading and un-arcing and un-zipping stuff, but that's probably my fault, not GEnie's. As for AOL, there is a very specific reason I want it, and I was sorry (but not surprised) that there is no Atari support available for AOL. AOL is tied into numerous metropolitan newspapers around the U.S., and here in Silicon Valley, California, the San Jose Mercury News has Mercury Center, which has some real interactive stuff that allows you to write back and forth to reporters and editors (and they do respond), and you can do searches of the paper's news library, and look up wire service articles related to topics printed in the paper but that didn't make it into the paper, etc. This is not only a nice thing, it's almost essential for the work I do that I be plugged into Mercury Center. I would have loved to been able to get it with my Atari, but I could not, except by emulating a Mac. Too bad that Atari computers faded. We coulda' been a contender. I should never have knocked GEnie, (although I found their magazine articles and news stuff to be pretty outdated, useless, and irrelevant). I may even start up a subscription with them again, once I learn how to download and unzip and unarc stuff on a local Atari bulletin board called Bay Area Atari User's Group (BAAUG). Since I do have an Atari computer (Mega STe w/ 4mb ram,50 MB HD, two disk drives and both color and B/W monitor), I'd like to have as much access as possible to games and stuff that's still out there. But I couldn't figure out how to get full use out of GEnie, and it was going to waste by inactivity. --Mark van Wyk

Two partitions got massively corrupted....and I wiped/zeroed them with
ICD Pro Utilities. Now they don't exist? I can _sometimes_ open them up
but they are empty and usually they don't respond to any program or even desktop
functions! What happened? How do I bring them back?

I have tried all the main ICD Utilities but none of them recognize the drives
(D & F). I even "remapped" the partitions but they still don't "exist". A
distinct possibility is that Datalite is part of the problem - on bootup,
Datalite refuses to run because it can't recognize two of the paritions. But
I don't think thats it.

Any help? respond ASAP! Thanx - darmok.

TH> Anyone know of any calendar programs that will fit the bill?

Have you tried TODAYS. It's up to version 2.00 now, and 2.01 is due out "RSN".
It'll give you a display of today's dates, events that are upcomming, and
events that have already happened. Having no sense of time myself, I use it to
remind me of upcomming family and friend's birthdays, when bills are due, etc.

I've turned on almost _all_ the date info so you can have a look at it
(Normally, I don't get out this much!) but it'll give you a display something
like this (It's fully editable so you can get what you like):

Gregorian Date: 10/28/1994 Time: 06:03:50 CDT
Julian Date: 2,449,654 Time Remaining: 17:56:10
Julian Year: 6707 Greenwich Mean Time: 11:03:50

You can try another printerdriver like HPDJ3.1 which connects to the serial
port. I don't know if it works. HPDJ3.1 is available from several (mac)
FTP-sites.

When a fileselector or another modal dialog pops up, the screen is locked
for the application displaying the dialog. Any other process which wants
to write to the screen will be blocked. Processes which do *not* write
to the screen and just doing background transfers will continue to be
scheduled. So you can have background transfers in such a case, it all
depends on how clever your software is.

When a disk drive transfer is on its way, the drivers in the ROM (and
the hard disk drivers) sit in a busy-waiting loop and use all
processor time. They *could* use interrupt-driven transfers with
a reentrant OS kernel. Unfortunately, the kernel is not reentrant,
so we're stuck with this. I'm told, however, that the next MagiC
version will have background DMA transfers, so they must have introduced
some kind of reentrancy in their kernel. Sounds like hot software
to me.

Well, there's no metal shielding in the later TTs, so they must have
learnt something albeit too late.

The ability to render all the ISO characters in HTML would *require*
SpeedoGDOS (or NVDI3), as many ISO characters simply are not in the
8-bit Atari set (but do exist in the 16-bit Speedo sets).

I think your best bet is to backup all the other partitions and re-format
your hard drive. I had a similar experience with a "repaired" cpu once.

First get your hard drive working again, Then you can muck around with a
compression program. Compressed data is alwys harder to restore. Good luck!

: I'm sure it is nice, but will it be any match for the TOS-clone, MagiC
: v3? MagicC 3 has the advantages of being out this year, being *very*
: fast, having MiNT-compatible features like loadable filesystems and a
^^^^^^^^^^^^^^^^^^^
: 3D AES. TOS 4.92 has the advantage of being official, the
: disadvantages of being a beta release, and unfortunately will probably
: never be released by Atari (IMHO).

These loadable filesystems are *not* comptible to MiNTs xfs.
The developer said their format is more powerful/flexible/better.

There are no docs available on loadable filesystems for MagiC.

It really is a shame that some (IMHO good) programmers waste time
to reinvent the wheel (badly).

They blew KAOS 1.4 (KAOS 1.2 was grate) and now they are developing
a whole incompatible OS. Is the atari market really that big that it
can support 2 OS (not counting Linux which ist TT/Falcon only)?

1764. STe: How to go from 2MB to 2.5MB?

Newsgroup: comp.sys.atari.st
Date: 1994-10-28 10:51:31 UTC
From: dan@hpwina39.uksr.hp.com
Message-ID: <38ql3j$ga3@hpwin055.uksr.hp.com>
Source record: 178190

Newbie question here...

Well actually I've owned my STe for nearly 4 years. But I've only just upgraded from 4 x 256k to 2 x 1MB SIMMs. I believe it's possible to add two of the 256k SIMMs to make 2.5MB, but when I do that, the STe reports that it's got 4MB and then gets some things screwy.

There's a patch or something, isn't there?

What's it called? And can someone uuencode it and email it to me?

Thanks & regards,
Dan.

Possibly the original atari port was before Mint-net was released and so could
not be used as a web browser as it had no way to actually connect.

1772. Falcon Availability?

Newsgroup: comp.sys.atari.st
Date: 1994-10-28 14:02:47 UTC
From: dking@gbc.gbrownc.on.ca
Message-ID: <38r0a7$il0@gbc.gbrownc.on.ca>
Source record: 178212

Is the Falcon still available commercially? Is so, how much is it. I'm in Canada so canadian prices would be appreciated. Do you have to order direct from Atari. Is there any new Falcon hardware development going on? Such as an '040 or PPC Falcon?

thx...

dk.

I agree that there would have to be built in routines, however, support
for MiNT and MiNTnet is important. Would it be possible to use drivers
in the program to allow compatibility with both?

>

Nope - all performance software is independant of the number of colours on screen. Ok, perhaps a minimum res can be required say, 640*400 :)

Seriously, you should support colour modes, as the majority of the people who would actually get round to using Mosaic will have a larger machine anyway (the unwashed masses who own ST's don't generally care about the WEB).

My view......

Craig (f030 4/32Mhz, 800*600*16colour SVGA).

IG>JH>me to use a Koala Pad or Atari Touch Tablet instead of the ST mouse?

IG>This won't be of any use due to insufficient hardware capabilities. The Atar
IG>ST has no a/d converters :-(
IG>(On STE's it may work...)

Actually, it would be fairly easy to do, but it would require an
external adapter box containing one or two A/D chips. Draw power from
the usual +5v line at the joystick port, connect the A/D output to the
appropriate directional lines at the same port, and plug the Koala Pad
into the A/D analog lines. Shouldn't be too awfully hard. I'll look
into this if someone has a spare Koala Pad I can play with.

>replacements (such as MINT). DON'T skimp on the documentation, and don't even
>think about mentioning delivery dates until the package is ready to ship!

The question of MiNT/MagiC support is an interesting one - I would
certainly like Annius to write an all-in-one package where the
application includes the code that handles the SLiP/PPP link. However,
if Annius is going to write that code anyway it'd be kinda cool if he'd
let the SLiP/PPP interface into the public domain/shareware arena.

Then Atari would have an equivalent to the IBM WinSock program, which,
in a multi-tasking environment gives the OS the TC/ICP layer required
for all direct-connection internet links. This, in turn, would enable
programmers (like me) who are unable to get as deeply into code to
write these kinds of sockets to go ahead and write the kind of GUI
based Internet tools that the Atari is crying out for.

This currently exist/is about to exist in the form of MiNTNet, yet this
isn't good enough for a lot of us - with the old MTOS AES which is,
not to put too fine a point on it, crap. What we need is a TCP/IP layer
that works under MagiC - whether this is possible depends very much on
whether or not any kind of pipelining is available under MagiC 3.

1780. ST and Jaguar Games: help!

Newsgroup: comp.sys.atari.st
Date: 1994-10-28 16:54:00 UTC
From: duchene@9-800.frec.bull.fr
Message-ID: <38rab8$bfu@vercors1.frec.bull.fr>
Source record: 178213

My son and I are stuck in level 51 of Dino Dudes on our Jaguar!
Does anyone know how to pass this level, or the code for level 52?

We have also given up with Transartica on ST after having bought
a second engine, travelled everywhere (including the hidden part near
the middle of the map) for virtual months and years...
Any ideas?

I have heard of No Limit 2. This should be a ST pinball game, PD or
shareware. Am I right? Is there a ftp site?

Thanks for your help!

1781. New Atari-CD's?

Newsgroup: comp.sys.atari.st
Date: 1994-10-28 16:54:00 UTC
From: Hendrik_Mylius@pb2.maus.de
Message-ID: <199410281854.a10826@pb2.maus.de>
Source record: 178220

Hi folks!

As I'd like to use my CD-ROM a little more, I'm kinda interested in all sorts of information concerning possible new CD's out here, there or anywhere ;-)

I've heard about the *a.a.u.e CD* (System Solutions sell 'em right?). Has someone played around with this CD and would be willing to make some comments about the product?

What about Walnut Creek? A new *GEMini* out from those guys?

Is there a chance of an *Atari-Linux* CD being released in the near future? With complete X and TeX and so forth, of course.

I've heard some talk about a complete MiNT-distribution being released on CD as well. With all the stuff needed for easy installation and even the whole MintNet and sockets stuff.

Any comments welcome! Please respond in PMail as well. You know, the gateway is somewhat picky sometimes.

Well I'd agree that some of the ST mags have carried reports of
Silica opening shops within some UK high street stores such as
Debenhams I'd question the bit about them being Atari Shops.

I recently had occasion to visit town and popped into the Silica
shop within a shop to be absolutley overwhelemed by the amount of
Atari stuff on display.

Ah ! whats this I spy tucked away in the corner ! practically
nothing. No Falcons No ST's to be seen any where at all.

1783. New programs for the Atari.

Newsgroup: comp.sys.atari.st
Date: 1994-10-28 16:58:10 UTC
From: jonaeson@algonet.se
Message-ID: <38raj2$pe0@aristotle.algonet.se>
Source record: 178202

Hi!

Since I have sent some good programs to ftp.tu-clausthal.de the last few days, I'd like to tell you all about them.
It's four programs, 2 of them are written by me, the other 2 are written by a friend of mine.

FASTBT04.ZIP (written by me)
NVRCF030.ZIP (also a program from me)
LASCAN29.ZIP (Written by URAN - Ulf Ronald Andersson)
PFXAFX_K.ZIP (also written by URAN)

Fastboot F030 v0.4beta is a small hack that place a new bootsector on the disk in drive a, which will at bootup bypass IDE-boot sequence and memorytest. This is useful for all of you who doesn't have an IDE HDD in your Falcon, since TOS needs about 10 seconds to discover there is no IDE HDD present, every boot-up. Thus allows this program all F030 owners without an IDE to boot just as fast as F030 owners with IDE.
Current version works on TOS 4.01/4.02/4.04.
(betaversion since I have no machines to test TOS 4.01/4.02 on)

NVRam Configurator v1.0 is another NVRam-config program, with some nice features.

LaceScan v2.9 is a beta-release of 3.0, and is a program to make use of the overscan-possibilities in the ST, with some VERY nice features...
It can emulate other resolutions, such as TT-high. It has built in filters for emulating more/less colours, reducing flicker in interlace and much, much more. This is a MUST if you have a ST with the hardware overscan modification. You can also turn off overscan in desktop/gem programs without changing res, the program keeps emulating overscan etc.
Very nice program.

XPFX/XAFX v2.1k is a debugged and heavily improved version of Questers PFX/AFX v2.1, it allows you to pack files, and save about 50% of diskspace and all unpacking is done be gem when you access a packed file.
Great for packing texts, prgs etc. It also remembers the original size, so you will se all packed files with their original size in desktop.
It even fools calamus into thinking it hasn't been altered (if you pack calamus ofcourse) and thus you have saved 50% of calamus diskspace.
Also a very good program!

All files has been transfered to ftp.tu-clausthal.de it will probably be available there in a few days.

Greetings! // Tommy Jonaeson

I first thought it was a power supply problem, but it turned out to be something with the drive; possibly the motor.

Anyone know where to buy/how to replace the motors in those pups; not that it's worth saving to anyone but a skinflint like myself.

John Trimble
nicole@seas.smu.edu

1786. Dextrous Development - Assistance needed.

Newsgroup: comp.sys.atari.st
Date: 1994-10-28 19:06:06 UTC
From: dbrewood@nest.demon.co.uk
Message-ID: <941028Z190606.758dbrewood@nest.demon.co.uk>
Source record: 178204

The Black Scorpians (BS) are working well on Dextrous, and it's progressing nicely, however some assistance is needed to add a few more features into the system.

This is now the time for you to have real input into what goes into Dextrous, they want to add the following list of features into the system, but need your response to make them a reality.

They are looking for information concerning the file formats of the following scaleable font formats for inclusion within Dextrous;

- Speedo
- True Type
- Postscript

If anyone can assist with the formats then they will be incorporated into Dextrous (who needs NVDI 3.00 or Speedo) ;-}

They are also looking for the following sound file structures; WAV, SND, AVR, etc, as Dextrous so far only supports MOD files.

Finally they are trying to locate a copy of the latest GEM.DOC which is diostributed with MiNT so that they can incorporate support for all the latest functions.

I now know a lot more about the program, and can safely say it will be incredible, with a host of features that I just can't find the time to list.

It is much more than a replacement desktop, it's a full replacement for the AES/VDI/TOS system and is fully multi-tasking. It's so far got every feature I've asked about, including those in TOS, Neodesk 4, Ease, and has a lot of other stuff as well. 256 colour icons, completely configurable window system (windows, X, or NeXT) types, with operating systems to match.

If anyone has any queries concerning it, and it's features I'll quite happily send a list of questions up to the team.

Source record: 178221

On Tuesday October 25th at about five past twelve
hallvart@ifi.uio.no (*Hallvard Tangerï¿½s*) happened to write:

Hello there!

HT>I would also like to get hold of a program that will let me assign
HT>samples to various "beeps", like if you move outside the file selector
HT>etc. Not just the "sysbeep" thingy, but for different areas of GEM.

I'd say you should give SAM a try. The *System Audio Manager* comes from Atari
and lets you assign any sound to various actions.

It supports WAV, AVR as well as RAW soundfiles. The latest version I've seen
was 1.1 but there might be a newer one out somewhere.

HT>So, which program(s) are available and where do I find them?

I cannot tell you where to get it,as I have no ftp-access whatsoever. It
should be available somewhere on a.a.u.e, anyone?

There is a commercial German program available. But *Crazy Sounds* is probably
not what you're looking for.

On Thursday October 27th at about twenty past nine
rgivan@cix.compulink.co.uk (*"Roland Givan"*) happened to write:

RG>There's no hope of an ST running full blown X-11. It might be possible
RG>to use it as a basic X terminal - but nobody has done it yet.

Whoa! Hold it right there, Roland!

There is a fully featured X-Server available for the Atari. It was tested in
the January issue of the German ST-Computer. It seemed to be working really
fine.

1791. Upgrade TOS 1.02 -> TOS 5. How?

Newsgroup: comp.sys.atari.st
Date: 1994-10-28 19:44:21 UTC
From: swhatley@blkbox.com
Message-ID: <38rkal$hnl@news.blkbox.com>
Source record: 178214

... and how much will it cost?

I have a Mega 4 ST bought in '87 with TOS 1.02 and I would like to upgrade it to run TOS 5 or what ever the latest TOS verions is. The following quesitons come to mind.

1. Is it worth it?

2. Assuming it's worth it, what hardware/software do I need?

3. How much can I expect ot pay?

4. How about replacing 68000 CPU with a 68010 or a 68020?

I asked my Atari dealer (now out of business) about going to MTOS 2.? a few years ago. His response was, "Don't bother trying. It isn't worth the cost!" Is it worth the cost, now?

Thanks,
Steven Whatley

1792. Re: [Q] Medusa incompatibilities?

Newsgroup: comp.sys.atari.st
Date: 1994-10-28 19:54:13 UTC
From: s2887@FB1.FHTW-Berlin.DE
Message-ID: <38rkt5$gh3@mars.fb1.fhtw-berlin.de>
Source record: 178216

The medusa itself has a incompatibilty (to all "true" ataris):
If the MFP makes an interrupt request and removes this request
while the CPU is at an interrupt priority level of 6 (or 7) and
didn't service the interrupt immediately because of this high ipl,
all "true" ataris "forget" the interrupt. But the medusa (I think its
a bug in the glue logic between MFP and CPU?) tries to do an int.ackn.
(and the MFP doesn't respond - correctly) after the ipl is lowered
and a "spurious interrupt"
occurs.

Very bad!

Greetings, Harun Scheutzow (s002893@rw420b14.rz.fhtw-berlin.de, at the
moment using the acconut of a friend via modem)

You're right! All of us who have our copies of cashed checks should
bring a class action lawsuit against Aaron. He accepted our money
without providing agreed upon items. If he had never cashed the checks,
it'd be a different story. He's a crook!

>1. Is it worth it?

Sure its worth it, just as any major upgrade is. BTW: you can go to
TOS 2.06, as far as I know. Lots of new stuff, much too much to list
here. Just look at the revision numbers and you decide :-)

>2. Assuming it's worth it, what hardware/software do I need?

Depends on your machine. I had a two ROM set STe, and it was simply
a matter of plugging in the new TOS 2.06 ROMs (they come on two),
and setting a jumper (I think to access the larger ROM size).

If you have a 6 chipset version (most likely), youll need a TEK,
TOS extension kit, which allows you to plug the two set 2.06 on
a special daughterboard that itself plugs into the old ROM sockets.

Youll spend no more than $150. THe 2 chipset itself only costs $60,
and is well worth it. The TEK is $150, and may require detailed installation

Atari Mega STe
--------------
4 Meg RAM
16 mHz / cache
separate keyboard
2 Serial ports
LAN port
VME expansion slot
52 meg internal Hard Drive
TOS 2.06

Price - $550 or best offer (includes software below)

Software
--------
PageStream
WordUp
Codehead Utilities
Warp 9
Multidesk Deluxe
Compute your Roots

Lots of other stuff, including MIDI sequencers, shareware,
programming, etc. plus 2+ years of ST mags and disks from
England.

Matrix CoCo Graphics card (VME)
-------------------------------
256 colours
1 Mb VRAM
up to 1024 x 768 resolution
fully programmable/configurable
supports virtual resolutions up to 1260 x 900

works in Mega STe or TT

Price - $300

Canon Multisync monitor
-----------------------
14 inch
.28 dot pitch
800x600 max resolution
```

works great with graphics card above

comes with multisync switchbox to give you all 3 ST resolutions
in one monitor

Price - $300

ST> print using a LaserJet on the university system. So if I could print
ST> to a file I could put this file onto the univeristy system and just
ST> dumpit to the printer.

I had a litle acc file named PrintToDisc. I worked fine with calamus on a STE,
but now i have a Falcon and the acc doesn't work on it. Due to priv
instructions are different on the falcon.

The PrintToDisc acc saves the captured data in a compressed file format, so you
can get a full page on a 720k disc. There is a DOS exe file that decompress the
data file and sends it to one port on the PC.

If you are feeding the output of the CD drive into the audio in port, and
are expecting it to come out the audio out port, you'll need more than
wishful thinking. Look for a program called SPEAKER THRU (or some such...)
on atari.archive; it's turns on the microphone (audio in) port and feeds
it directly to the output (audio out) port.

You can only fit TOS 2.6 to your machine, but I do sugest that you replace the
TOS 1.2 for one thing with TOS 1.4, 2 chip set..

The other thing you could do is to use Neodesk, has more features than
all the other Desktops...

If you go for TOS 2.6 get the switchable TOS version, CodeHead sell it..

Fit a internal Hard Drive and Auto Overscan...

> 1. Is it worth it?

The newest TOS you could put into your machine is 2.06, which would require a small board and new TOS chips. The newest TOS you could put in with just chips is TOS 1.4. IMHO, neither is worth it, from a pure monetary efficiency point of view (this is a religious issue with some, so expect some different opinions). I would recommend that you put the $50-$100 toward Neodesk 3/4, or NVDI, or UIS3, or an AdSpeed (see below). Any of these will provide much more than the TOS upgrade. The newer desktop in 2.06 and above is definitely better than the older one, but nothing compared to Neodesk. YMMV.

If you do decide to go with TOS 2.06, make very sure that you get a TOS board upon which you can install your TOS 1.2 chips as well and switch between the two easily. TOS 2.06 doesn't work with a lot of older games, and some application software. I'd have gone absolutely nuts if I hadn't held onto my Mega2 (when I got my MegaSTE).

> 4. How about replacing 68000 CPU with a 68010 or a 68020?

Perhaps better would be to get an ICD AdSpeed 16mHz board. The speed increase is very nice indeed. It can switch between 8mHz and 16mHz, just like the MegaSTE, for compatability. I think they run around $150-170 or so new, though ICD had them on super-sale for awhile.

> I asked my Atari dealer (now out of business) about going to MTOS 2.? a
> few years ago. His response was, "Don't bother trying. It isn't worth
> the cost!" Is it worth the cost, now?

I have not heard a lot of good things about MTOS and regular ST machines. On TT/Falcon machines (quite a bit faster), I have seen folks say that it is everything from barely bearable to fantastic. A stock 8mHz ST just doesn't have the horsepower, it seems. However, I cannot speak from experience.

There was supposed to be an Xtra-Ram VME board that could allow another 4mb of memory, for a total of 8mb max on a MegaSTE. The MegaSTE has provisions for an extra 4mb right out of the box, amazingly enough, but Atari apparently never did much with this. Anyway, I'm not sure if it ever actually came out, nor do I know how useful this extra 4mb would be (it would proably be like TT ram, separate and sometimes unusable). Toad would probably be a good place to check (1-800-448-TOAD).

1812. FZSTerm

Newsgroup: comp.sys.atari.st
Date: 1994-10-29 04:21:08 UTC
From: ericw@okcforum.osrhe.edu
Message-ID: <38sijk$2h7@romulus.ucs.uoknor.edu>
Source record: 178219

There seems to be a discusion on whether or not to post the key (illegal)
to Aaron Hopkins FZSTerm program. I dont think the key should be posted
cause it is against the law. However, mail fraud is also against the law.
Advertising a product (here the whole use of FZSTerm by a key) for a fee
and doing business by the mail causes me to think that this is what is is.
I paid thinking I would recieve a product by mail from Aaron Hopkins but
instead I recieve nothing but my cashed check from the bank. Whoever has
the rights to the program had better fix the problem. I guess everyone
with cashed checks could go to the postal inspectors office and file a
complaint. If they cannot get you a key, Id bet they will get our money
back......

It was none other than Tommi Hietavuo that wrote on 24 Oct 94 that ,
TH> Btw; does anybody know what happened to TORNADO flight sim for
TH> Falcon/ST..? (Digital Integration) - and those other games planned
TH> ?
Good question ..anyone ?

TH> There is an editor program (Public Domain) for Amiga 8-(available
TH> for MICROPROSE FORMULA ONE G.P. IF, if and if... anybody happens to
TH> know the author, it would be VEEEEEEEERY nice to have it converted

I have talked to him in the Fidonet GP area ...I'll dig out his internet
address if he has one although all problems hinge on the disk protection
scheme as the disk's are formatted to 39 tracks/9sectors and as you know
are not readable from the desk and this is not the case on the
Amiga or PC versions :-(

TH> for Atari, too! Also, a hard disk installable, Falcon-compatible F1GP
TH> would be a dream come true. As MicroProse apparently hasn't got any

Well I know your right ,F1GP isn't totally falcon compatible but it does work
very nicely using Backwards ,set caches off ,best compatibility,16/16
on the CPU/BLITTER and it works perfectly . In fact once the game is loaded
you can switch the caches on again and it is VERY FAST. The only time you have
to switch down is for disk changes and to format or save a game you have to
have the CPU set to 8 else it locks up . (all this is done through
ALT-CNTRL hot keys BTW while the game is paused)

TH> interest for us anymore, is there anybody who could write some
TH> modification program (patch or something) to
TH> make this great program more Falcon and HDD friendly..?

Does anyone know how it is to restore a disk image file onto a hardisk so it
ignores the file format information ? That should do it as apart from the disk
access it is perfectly Falcon compat. HD friendly might be trickier some in
here was working on the much harder to patch GOLF and it looked involved :-(

TH> As there are over 50.000 of us, owning a legal F1GP, I can't be the
TH> only one wondering these things - or can I..?

My phone bill to microprose over this situation was immence :-(

TH> Thanks for any help and info !

1815. Atari software must go...

Newsgroup: comp.sys.atari.st
Date: 1994-10-29 05:22:54 UTC
From: Doug Finch <76337.1067@CompuServe.COM>
Message-ID: <38sm7e$gu2$2@mhadg.production.compuserve.com>
Source record: 178111

ATARI SOFTWARE FOR SALE
Thanks to your swift response, I'm SOLD OUT out of Asteroids cartridges for Atari 8-bit computers. However I still have a good supply of surplus items purchased at auction. All are unused, unopened, factory-fresh, in original boxes. All 8-bit items will work on 400/800, XL and XE machines, all of the games are cartridges; productivity items on 5.25" diskettes. All ST software is on 3.5" diskettes. SHIPPING TO THE U.S. IS INCLUDED IN THE PRICE.
The games and programs are, for the most part, vintage but very entertaining, playable and/or educational. As for shipping, U.S. buyers can expect non-priority U.S. mail or UPS delivery. Buyers outside the U.S. should enclose an additional $2 (US) per item for shipment via surface mail). Contact me by E-mail for more information. Here's what I have:

SOFTWARE PRICE (Incl. US shipping)
ST Games:
Missile Command (arcade classic) (DS 5018) = $4
Battle Zone (tank shootout) (DS 5020) $4

ST Productivity:
Haba/How to Write Professional
Business Letters (boilerplate specials) = $5

Also -- For the 8-bit Atari -- Game cartridges: Defender, Star Raiders, Joust, Sky Writer, Qix, Music Composer, $4 each; Productivity diskettes: AtariWriter Plus (incl. spellchecker), DOS 2.0 (w/tutorial) $7.50 each; Home Filing Manager, $4. Ask about Silent Service for Apple II,IIe,IIc; WordPro 3 Plus for Commodore 64 and goodies for IBM compatibles. Drop me a note via E-mail to make sure I've still got what you're looking for and for my mailing address. When I confirm I've got your item(s), and your check or money order clears, I'll ship immediately. If anything doesn't work, I'll replace it or refund your money, provided you pay for reshipment. Bonus program included (my choice, you specify 8-bit or ST) while supplies last. Will consider reasonable swaps. Enjoy your Atari! DF

]
] You can only fit TOS 2.6 to your machine, but I do sugest that you replace
] TOS 1.2 for one thing with TOS 1.4, 2 chip set..

TOS 5 will probably be released RSN (e.g. never, or in about 2 years),
and at the moment is only in software form as a v4.96(?). It also won't
work on anything but the Falcon, and would be even less compatible with
anything you are likely to run than TOS 2.xx is.

: Erm, which audio output jack do you mean? The CD audio comes from a
: separate connector on the back of the bare CD drive, it's completely
: separate from the computer audio.

I thought that ED Pro read the audio data from the CD drive into the Falcon.
So it seems that the ED Pro cdaudio.prg requires the CD drive to have an
audio output. Do all drives have a headphone jack?

Yes, TOS 2.06 provides a Maddalt() call where an auto program can inform the system of extra memory, so you can install extra memory by using your own memory support hardware although the mmu still only supports 4Mb. This is treated as 'TT ram' (correct name is Alternative RAM) so as you say a few programs can't use it. Actually most of them can if you tweak a couple of bits in the header. Those that can't are ones that use DMA sound hardware etc as this requires the memory to be controlled by the mmu.

>I've heard about the *a.a.u.e CD* (System Solutions sell 'em right?). Has
>someone played around with this CD and would be willing to make some comments
>about the product?

I haven't, but aaue is fairly comprehensive and the cd is probably worth getting if you don't have good fast ftp access. It also includes a few other things, including an archive of gem-list postings (I hope I haven't said anything too embarassing :)

Compo have released a new CD recently, I don't know what that's like.

>Is there a chance of an *Atari-Linux* CD being released in the near future?
>With complete X and TeX and so forth, of course.

Not in the near future, because there won't be an atari linux in the near future. Beta versions are around and are apparently usable, although I think a final version is still some way off; certainly you'll have a wait for X.

>I've heard some talk about a complete MiNT-distribution being released on CD
>as well. With all the stuff needed for easy installation and even the whole
>MintNet and sockets stuff.

It would be nice, but I don't think it would fill a whole cd yet. As everything is on aaue a program to install MiNT from the aaue cd would be nice.

They won't get Speedo, which bitstream are very protective of. TW3 only supports it because it includes a complete scaler from bitstream. TT and PS formats are freely available.

>They are also looking for the following sound file structures; WAV,
>SND, AVR, etc, as Dextrous so far only supports MOD files.

The avr format is a simple header and then the raw sound data. The header format is in a file called avr.h thats hidden on one of the LatticeC discs somewhere.

HBJ>virtual memory -it is possible to add software virtual mem (this is what
HBJ>Outside does...)

OUTSIDE doesn't work with 68k machines!

You need a 68030 to use a _real_ virtual memory manager like OUTSIDE or VRAM.

Well, it's your own fault. If you are going to register a ShareWare-product,
then get in touch with the author first to be sure that nothing like that
happens (for a example, the author may have moved, or perhaps sold his
computer).

The main problem I find with Shareware CD's is they become obsolete so quickly.

I haven't seen the system solutions one yet, but I do hope they have checked
out the contents - there are some programs in the archive that have created
problems for PD vendors, (in the UK at least) e.g.. STrabble and SW Software.

Disney recently clamped down on a clip art CD, (it cost the dealers and
distributers thousands), so these things don't go unnoticed.

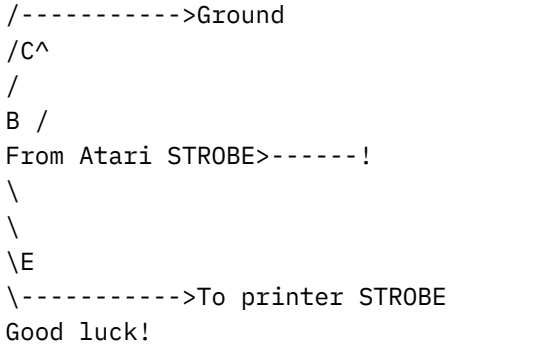
I saved the hardcopy of a post that was on the net a long time ago.
It must have been because the paper has turned yellow anyway I'am
quoteing someone who's name didn't get printed.

"HP Deskjet Plus / Atari ST power-up sequence problem - - solved
I have discovered that if the Atari ST parallel (printer) port
STROBE line (normally high) is pulled toward ground (low) by a
heavy load (such as a powered-off Deskjet), the ST STROBE
line will thereafter stay low until the load is removed (by
powering up the DJ), and until software intentionally sets the
STROBE line high again. (Weird note: the STROBE line has to be
pulled low for something on the order of 1/2 second or longer for
it to stick low -- I do not know why this is.)
Once the STROBE line gest stuck low, the DJ responds with a BUSY
set high. The Atari TOS will not send any data to the printer
while the BUSY line is high -- so no printing can take place.
THE FIX
Install a PNP transister in the STROBE line. This fix is much
simpler than it may seem. Also it simultaneously solves the
heavy loading problem the DJ puts on the the Atari STROBE line.

(Without the transister, the loading on the STROBE line
appears to push it near the 0.8 volt level limit. The Data
lines do not seem to have the same problem, their low levels
seem to be well within limits so no buffering is needed.)
You Need:
- One 2N2907 (or practically any PNP transistor) RS#276-2023
- Access to the printer cable wires for pin #1 (STROBE) and any
ground pin (pins 18-25 on the Atari end, or pins 19-30 on the
DJ end.) I managed to do this inside the cover of the centronics-
type connector or a A/B switch box makes it easy.
Step 1 Disconnect the STROBE wire from pin #1.
Step 2 Connect the Emitter (E) wire of the transistor to the
printer side of the wire/pin#1 split you did in step#1.
Step 3 Connect the base (B) of the transistor to the Atari side
of the wire/pin#1 split you did in step#1
Step 4 Connect the Collector (C) of the transistor to one of the
ground pins (18-25) Atari end or 19-30 DJ end.

Caution: Metal cased transistors often have the case
electrically connected to the Collector-- hence the case
will most likely be grounded -- avoid having the case
touch anything that schould not be grounded.
Step 5 Close up and/or wrap up. Make sure the transistor case
(if metal) and connections are not toching anything they shouldn't
be.



Good luck!

I would prefer that it runs on any standard ST/TT/FALCON. My set up is a
STe with 4 Meg memory and coluor monitor - I have MiNT/MultiTOS but rarely
use it as it is normally to slow.

I would like built-in support for dialup SLIP/PPP, ftp, mail, news etc.
You could possibly do a 'full suite of clients' (e.g. gopher, wais.) as
loadable modules if memory constraints are a problem. You could then do
a basic setup and sell additional modules to those that wanted them.

Shouldn't be a problem now that I've got the patches.

>As far as i know, there are already ports of ELM and TRN available for
>MiNT. (ftp.cs.tu-berlin.de). A port of SMAIL is available in Bremen.
>For News-processing, i personally use the WNEWS-Package, although i've
>heard that some people already ported CNEWS and INND. (Hello Juergen ;-))

This is where things get scary... I can handle porting elm and trn or
tin or something, but beyond that, I have no clue. Is WNEWS easier to
use with UUCP? Is SMAIL hard to port? I grabbed uumail from
gatekeeper.dec.com when I was getting smail, but I haven't unpacked it
yet to see if it's useful. Do I need INND if I'm going to use CNEWS?

Yes I read this group, when I can. :)

This is the first report of it being 'quite buggy', so if it would help
if you send me more details. The latest released version is 0.9 and
I am working on v1.0, but unfortunately it is going a bit slower than
I would like (just not enough time left over for programming).

If you can't fine v0.9, let me know. It should at least be on
atari.archive.umich.edu and also on HENSA. If want to register I
may even send you a pre-release of v1.0 (hopefully not near as buggy
as v0.5 though).

If Danny hasn't responded already, I'm sure he will post the details
for HENSA. :)

No problems with me there got 14mb of memory and usually 10.3mb free in 16 colour mode. Go for it all.

Has the project actually started yet, or is it just being planned? Is so what timescale do you envisage before something comes out for testing?

BTW different topic, love the latest Edith, using it now in fact, one query though the searching routines seem quite slow, is there any chance that they will be speeded up at all?

From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <Jc5UTgT.johnhechtman@delphi.com>
Source record: 178105

I have a highly modded Mega STF/4 that I want to add more ram to. I've got Codeheads TOS 2.06 board on the expansion slot (the T2.06 board has a pass-through on it for the slot). There's also an AT-Speed IBeMulator mounted to a socket soldered on my 68000 chip. I've been told by the techs at Toad Computers that the Marpet X-tra Ram 8 board _won't_ work in my machine, that it interferes with both hard and floppy drive functions. Toad also said however, that this was do to the driver software for the Marpet and that new drivers were due out in a month or so. Oops that should be "due out" in the previous line (g). I'm not sure I want to go with the Marpet ;) Do I have any other options? What about a heftier power supply that would fit in my Mega's case? Thanks to all in advance for any info!

Regards,

John Hechtman

Roger Sheppard. (sheppard_r@ix.wcc.govt.nz) wrote:
> Can any one help on using Archie, I have tried using the built
> in Help stuff, but there are no examples..

I never have much luck with Xarchie, but the command line interface is a
piece of cake to use, given that it is correctly set up. Just type:

archie -s searchterm

For a substring search on searchterm. Substring means that it will return
any files that have searchterm in any part of its path (the default is
exact match, which is a bit hard to guess at times).

If archie does not have a decent default archie host, you can specify one
with the -h option, like:

archie -h archieserver -s searchterm

Here are some valid archie servers:

archie.sura.net(1526) (USA-MD)
archie.sura.net (USA-MD)
archie.ans.net (USA-NY)
archie.rutgers.edu (USA-NJ)
archie.unl.edu (USA-NE)
archie.funet.fi (Finland/Europe)
archie.au (Australia)
archie.doc.ic.ac.uk (GB/Ireland)
archie.wide.ad.jp (Japan)
archie.ncu.edu.tw (Taiwan)
archie.nz (New Zealand)
archie.th-darmstadt.de (Germany)
archie.switch.ch (Switzerland)
archie.unipi.it (Italy)
archie.ac.el (Israel)
archie.kr (Korea)
archie.luth.se (Sweden)

> The last time I managed to get some thing going, it only searched
> the site I was connected to...

That is weird. Hope the above helps.

That is the cartridge port. You can plug a Spectre Mac emulator in there,
a battery backed-up clock, a hand scanner, etc. It has direct access to
most/all of the CPU lines.

> Second, how can I copy between IBM and ST?

Easy way is to format standard 720k DSDD disks on the PC and just use them.
You will want to get a PC compatible formatter for your ST as well. I
highly recommend ps2form.tos from atari.archive.umich.edu. It is free,
and works very well (it makes better PC disks that some PCs I have used).
TOS versions later than 1.2 can format PC disks right from the desktop, but
I still prefer ps2form, as it seems to produce more generally compatible
disks (work even with bizzare PS/2 and NEC boxes).

> Third, can I hook up a hard drive with IDE or ST-506
> interface?

IDE is pretty much out, unless you want to build a host adaptor card from
instructions in a German magazine. ST-506 rings a faint bell, is this
just a standard PC MFM/RLL thing? If so, it is possible, but requires a
separate SCSI controller.

In general, it is a real good idea to just go SCSI. It is faster, simpler,
and more reliable. You need a host adaptor (either a card or an external
"plug" looking thing) to sit between the drive and the computer. I recommend
ICD stuff (card or external is about $90 new, much less used via the net).
SCSI drives are getting to be almost as cheap as IDE, and they are available
on the used market as well.

> Fourth, are there any magazines for the ST? Thanx fo any help!

Yes. There are at least two US based magazines, Current Notes and
ST Informer. There are several UK ones as well (these are expensive, but
they all come with a floppy or two of software). Of course, comp.sys.atari.st
is the best Atari magazine in the world, so you already have an edge there.

I suggest you call up Toad Computers at 1-800-448-TOAD, ask for one of their
cool catalogs (which will give you a much better idea of what is out there),
and buy a copy of Current Notes and ST Informer. This will be money well
spent to get you started. If nothing else, get their catalog.

I haven't received mine yet, with any luck I'll have it Monday, if not I'll
be phoning up Sytem Solutions again! ;-)
